#### GENERAL REVIEW

Data on total highway, road, street and bridge construction activity is provided in the Statistics Canada publication Construction in Canada Catalogue 64-201. Text Tables I to V of this catalogue are reproduced from that publication. The sum of items 46 and 80 of Text Table V, amounting to \$3,667 million for 1979, represent this total activity. Total activity comprises the output of the construction industry proper, plus the output by the construction labor forces of establishments classified to other than the construction industry (usually referred to as own account construction). As can be seen, this total is more than the \$2,364 million of highway, road, street and bridge construction contained in this publication (Table 1, items 3 to 7 and 9). This difference is due to the fact that a substantial amount of highway and bridge work is done by the labor forces of the various municipal, provincial and federal government departments (25% to 30%). In addition, 10% to 15% of highway and bridge work is done as secondary construction activity by contractors specializing in other than this type of construction (i.e. heavy engineering and non residential general contractors, trade contractors, etc.). A more detailed reconciliation between construction industry output and construction activity is available from the Construction Division of Statistics Canada.

## Methodology

In censuses prior to 1975, data were collected by direct survey questionnaire and made available at the reported level only. No estimate was made for non-response or for firms not included in the census. It was known, however, that the majority of missing firms were small and that the coverage in terms of dollar volume ranged from 85% to 90% for most of the various sub-industry groups. During the 1975 to 1979 census cycles, a blend of direct survey and systematic sampling methods was used to provide universe level estimates.

For 1979, construction firms were separated by total operating revenue into two groups; those with more than \$500,000 annual revenue and those with annual revenue in the range of \$10,000 to \$500,000. The larger firms received the census long form, of which a sample is provided at the end of this publication. The smaller firms were stratified by sub-industry group, size range and province, from which a representative sample was selected for the collection of financial and non-financial data. The sampling rates varied between 10% and 50% for firms less than \$50,000 annual revenue. Financial data were collected for all firms between \$50,000 and \$500,000 total operating revenue. The financial information was obtained from administrative records provided by Revenue Canada. Non-financial data (i.e., operating characteristics and

## REVUE GÉNÉRALE

Les données sur l'ensemble de la construction de routes, de rues et de ponts sont fournies dans la publication de Statistique Canada intitulée *La construction au Canada* nº 64-201 au catalogue. Les tableaux explicatifs I à V de la présente publication sont tirés de cette dernière. La somme des items 46 et 80 du tableau V donne la valeur de l'activité totale; celle-ci s'élevait à \$3,667 millions en 1979. L'activité totale comprend les travaux de l'industrie de la construction proprement dite, ainsi que les travaux de construction réalisés par la main-d'oeuvre des établissements qui ne sont pas classés dans l'industrie de la construction (travaux désignés habituellement par le terme de construction pour propre compte). Il est évident que le chiffre global dépasse la valeur des travaux de construction de routes, rues et ponts(\$2,364 millions) qui figure dans la présente publication (items 3 à 7 et 9 du tableau 1). Cette différence réside dans le fait qu'une partie importante de la construction de routes et de ponts est faite par la main-d'oeuvre des administrations municipales. provinciales et fédérale (25% à 30%). En outre, de 10% à 15% de ces travaux sont exécutés à titre d'activité secondaire par des entrepreneurs spécialisés dans d'autres genres de construction (entrepreneurs généraux en gros travaux de génie et en construction non-domiciliaire, sous-traitants, etc.). On peut obtenir un rapprochement plus détaillé de l'industrie et de l'activité de la construction auprès de la Division de la construction de Statistique Canada.

## Méthodologie

Dans les recensements antérieurs à 1975, les données étaient recueillies par questionnaire direct et rendues disponibles au niveau de déclaration seulement. En d'autres termes, aucune estimation n'était faite pour tenir compte des non répondants ou des entreprises non recensées. On savait toutefois, que la plupart des entreprises omises étaient petites et que le volume, en dollars que représentaient les entreprises incluses, s'échelonnait entre 85% et 90% dans les divers sous-groupes de l'industrie. Au cours des recensements de 1975 à 1979, on s'est servi à la fois de l'enquête directe et de l'échantillonnage systématique pour obtenir des estimations représentant l'ensemble de l'univers.

Pour 1979, les entreprises de construction ont été partagées en deux groupes selon le montant annuel de leur revenu d'exploitation: plus de \$500,000 et \$10,000 à \$500,000. Les grandes entreprises ont reçu le questionnaire de recensement détaillé, dont un spécimen figure à la fin de cette publication. Les petites entreprises ont, d'autre part, été stratifiées selon le groupe d'activité économique, la taille et la province; dans chaque strate, un échantillon représentatif a été tiré en vue de la collecte des données financières et non financières. Parmi les entreprises dont le revenu annuel était inférieur à \$50,000, la fraction de sondage allait de 10% à 50%. Des données financières ont été obtenues pour toutes les entreprises dont le revenu brut d'exploitation s'échelonnait entre \$50,000 et \$500,000. On a obtenu les renseignements financiers en consultant les documents administratifs de Revenu Canada. Pour recueillir les données non financières (c.-à-d., les caraclabour data) were collected for a sub-sample of this group, numbering approximately 15,000 contractors, by means of an abbreviated survey form. The sample results were inflated to the universe level using the weight associated with each record in the sample. The weight for a record was calculated as the inverse of its probability of inclusion in the sample (sampling rate), corrected for non-response. The large and small firm results were then merged and tabulated to produce the tables contained in this publication.

The following table shows the estimate of total operating revenue and a measure of its reliability for the highway, road, street and bridge industry, by size groups, provinces, or regions:

téristiques d'exploitation et les données sur la main-d'oeuvre) on a envoyé à un sous-échantillon de ce groupe, comprenant environ 15,000 entrepreneurs, une formule d'enquête abrégée. Les chiffres de l'échantillon ont été gonflés au niveau de l'univers à l'aide du coefficient de pondération lié à chaque document de l'échantillon. Le coefficient d'un document est égal à l'inverse de sa probabilité d'inclusion dans l'échantillon (fraction de sondage), une fois l'imputation de la nonréponse. Les résultats obtenus pour les grandes et petites entreprises ont ensuite été regroupés et totalisés en vue de dresser les tableaux figurant dans la présente publication.

Le tableau suivant présente l'estimation du total de leur revenu d'exploitation et une mesure de sa fiabilité pour l'industrie de grandes routes, chemins, rues et ponts, par groupes de taille, provinces ou régions:

- Establishments with annual gross operating revenues less than \$10,000 are not considered part of the General Contractors Industry and as such are not included in the universe
- Les entreprises dont le chiffre brut des revenus annuels d'exploitation était inférieur à \$10,000 ne sont pas considérées comme faisant partie de l'industrié des entreprises générales et de ce fait ne sont pas comprises dans les estimations représentant l'ensemble de l'univers.

  Data for establishments with annual gross operating revenue over \$500,000 are collected at universe level and for that reason are not subject to sampling error.

  Les données pour les établissements avec des revenus annuels bruts d'exploitation de \$500,000 et plus sont collectées au niveau de l'univers statistique et de ce fait ne sont pas
- sujet à l'erreur statistique d'échantillonnage
- Includes Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick.

  Comprend la Terre-Neuve, l'Île-du-Prince-Édouard, la Nouvelle-Écosse et le Nouveau-Brunswick
- Includes Yukon and Northwest Territories
- Comprend le Yukon et les Territoires du Nord-Ouest

The percentages are such that, with probability 95%, the percentage difference in absolute value, between the estimate shown and the true value would be at most the percentage shown.

Although estimates of reliability are not shown for data other than total operating revenue, again it may be not unreasonable to assume that the reliability of this data will be similar, at least where data for total operating revenue is of high quality.

Statistical users should note that the preceding values reported for highway, road, street and bridge contractors do not measure the total work performed in this industry within the 1979 construction pro-

Les pourcentages sont exprimés de telle facon qu'avec une probabilité de 95% la différence de pourcentage en chiffres absolus entre l'estimation et la valeur réelle ne dépasse pas le pourcentage indiqué.

Bien que des estimations de la fiabilité soient présentées seulement pour le total du revenu d'exploitation, on pourra supposer encore une fois que les autres données seront tout aussi fiables si les chiffres portant sur les revenus bruts d'exploitation sont de haute qualité.

Les utilisateurs des statistiques doivent tenir compte du fait que les chiffres indiqués ci-dessus pour les entrepreneurs de grandes routes, chemins, rues et ponts ne représentent pas tous les travaux exécutés dans cette industrie dans le cadre gramme. The following deficiencies are acknowledged:

the reported values do not include highway, road, street and bridge work performed by own account labour forces;

the values include minor amounts of non-highway and bridge work (e.g., sewers and watermains) performed by establishments whose principal classification is highway, road, street and bridge;

the values do not include minor amounts of highway and bridge work performed by establishments whose principal classification is other than highway, road, street and bridge (e.g., general contractors engaged in other heavy engineering, residential or non-residential work):

the values do not include very minor amounts of highway and bridge work performed by establishments having total annual operating revenue of less than \$10,000.

# The Highway, Road, Street and Bridge Contracting Industry

The 1979 output of the Highway, Road, Street and Bridge Contracting Industry (Table 1) indicates that the 993 establishments classified to this construction industry group had total operating revenues of \$2,846,441,785. This figure includes \$2,609,783,908 of construction revenue (including sub-contracts) derived from new, reconstruction and repair work and \$236,657,877 of non-construction operating revenue (e.g., sales of asphalt, ready-mix concrete, sand and gravel, rental of equipment, etc.).

On the basis of work put in place by own labour force (i.e., total construction revenue minus subcontracts), the 993 establishments classified to this industry in 1979 were responsible for \$2,184,051,748 of construction work.

The reported values for "total construction revenue" are known to contain some duplication of volume. The latter, in effect, could be reported on two occasions — first, by the general contractor who awarded the sub-contract and, secondly by the general contractor who received the sub-contract. If the contract was awarded to a firm acting primarily as a sub-contractor, then a duplication of volume would not occur as trade contractors are not included in this publication.

## Distribution by Volume of Work Put in Place (Table 1)

In terms of volume put in place, only 317 establishments or 31.9% of all establishments reported net construction revenue (excluding sub-contracts) of

du programme de construction de 1979. Mentionnons certaines lacunes:

les données ne comprennent pas les travaux de routes, chemins, rues et ponts exécutés par une main-d'oeuvre utilisée pour propre compte;

les données englobent des petits travaux de construction autres que les routes et ponts (par ex., égouts et tuyaux d'aqueduc) exécutés par des entreprises classées principalement comme entrepreneurs de grande route, chemin, rue et pont;

les données ne comprennent pas les petits travaux de routes et ponts exécutés par des entreprises non classées comme entrepreneurs de grande route, chemin, rue et pont (par ex., entrepreneurs généraux en autres gros travaux de génie, en travaux domiciliaires ou non-domiciliaires);

les données ne comprennent pas de très petits travaux de routes et ponts exécutés par les entreprises dont le revenu d'exploitation annuel était moins de \$10,000.

# L'industrie des entrepreneurs de grande route, chemin, rue et pont

Le produit 1979 de l'industrie des entrepreneurs de grande route, chemin, rue et pont (tableau 1) nous démontre que les 993 établissements classés dans ce groupe de la construction, ont totalisé des revenus d'exploitation de \$2,846,441,785. Ce chiffre comprend \$2,609,783,908 de revenus pour construction neuve, réfection et réparation (y compris les travaux confiés aux sous-traitants) et \$236,657,877 de revenus pour des activités ne relevant pas de la construction (telles que vente d'asphalte, de béton préparé, de sable, de gravier, location d'équipement, etc.).

Si l'on ramène les travaux de construction exécutés par les 993 établissements classés à cette industrie en 1979 à la valeur totale des travaux exécutés par leur propre main-d'oeuvre (c.-à-d., si l'on déduit la valeur des travaux confiés à des sous-traitants des revenus provenant de la construction), on constate qu'ils s'élevaient à \$2,184,051,748.

On sait que certains volumes sont compris plus qu'une fois dans le "total des revenus de construction". En effet, la valeur de ces travaux peut être déclarée à deux occasions — premièrement, par les entrepreneurs généraux qui confient des sous-contrats et deuxièmement, par les entrepreneurs généraux qui reçoivent de tels sous-contrats. Cependant, si les sous-contrats sont accordés à des firmes qui exercent principalement les fonctions d'un sous-traitant, le volume n'apparait qu'une seule fois étant donné que les entrepreneurs de métiers spécialisés ne sont pas inclus dans ce bulletin.

## Répartition du volume des travaux exécutés (tableau 1)

Pour ce qui est du volume des travaux exécutés, les 317 établissements qui ont déclaré avoir en montant net (à l'exclusion des travaux confiés aux sous-traitants) des reve\$2,000,000 or more in 1979. Their combined revenues, however, are equivalent to 85.6% of the total construction volume reported by this industry.

By contrast, establishments with net revenues of less than \$1,000,000 numerically represent 54.4% of all establishments, however, the combined value of their revenues amounted to 7.3% of total construction volume. The volume distribution of these size groups is as follows: \$10,000-499,999 (2.9%); \$500,000-749,999 (2.5%); \$750,000-999,999 (1.9%).

Analysis of the other size categories reveals that 82 establishments or 8.3% with net revenues of \$1,000,000-\$1,499,999 contributed 3.7% of the total volume whereas the remaining 54 establishments in the \$1,500,000-\$1,999,999 size range represented 5.4% and 3.4% respectively of the establishments and total construction volume.

## **Type of Construction**

Chart 1 provides a breakdown of the highway, road, street and bridge contracting industry's 1979 output by type of construction on the basis of total construction revenue.

#### Levels of Profit and Loss

Summarized in Chart 2 are the 1979 highway, road, street and bridge contracting industry levels of total profit (before loss), net profit and loss for Canada and the ten provinces. The provinces are arranged in ascending order on the graph on the basis of their individual total profit level.

## Distribution of Inputs to Total Operating Revenue, 1974-1979

Data for the highway, road, street and bridge contracting industry are currently available for the years 1970-1979. A selected portion of this data showing the relationship of certain inputs to total operating revenue is illustrated in Chart 3 for the 1974 to 1979 census years. The dollar value of each component is also expressed as a percentage of the related total operating revenue for each year.

## **Balance Sheet Sample (Table 2)**

A sample of balance sheet information for 475 establishments with related income statement data appears in Table 2.

While Table 2 is primarily a cross-classification of statistical data by region or province and by size nus de construction de \$2,000,000 ou plus en 1979 représentaient 31.9% seulement de l'ensemble des établissements. Le total des revenus qu'ils ont reçus s'élevait cependant à 85.6% du volume total des travaux de construction déclarés par toutes les entreprises classées dans ce groupe de l'industrie.

 ${\rm \mathring{A}}$  l'opposé, les établissements dont le total des revenus nets était inférieur à \$1,000,000, représentaient 54.4% des établissements, alors que le total de leurs revenus n'était que 7.3% du volume total des travaux de construction. La répartition du volume dans ces tranches de taille est la suivante: \$10,000-499,999 (2.9%); \$500,000-749,999 (2.5%); \$750,000-999,999 (1.9%).

L'analyse des autres tranches de taille démontre que 82 établissements ou 8.3% avec des revenus nets de \$1,000,000-1,499,999 ont contribué 3.7% du volume total. Enfin, les autres 54 établissements qui ont enregistré des revenus nets de \$1,500,000-1,999,999 représentaient 5.4% et 3.4% relativement à l'ensemble des établissements et au volume total des travaux de construction.

## Genre de construction

Le graphique 1 démontre la répartition des genres de construction exécutés par les entrepreneurs de grande route, chemin, rue et pont selon les revenus de construction en 1979.

## Niveaux des bénéfices et pertes

Le graphique 2 représente pour l'année 1979 les niveaux de bénéfices totaux (avant pertes), bénéfices nets et pertes pour le Canada et les dix provinces pour les entrepreneurs de grande route, chemin, rue et pont. Les provinces sont rangées dans le graphique selon l'importance individuelle de leur bénéfice total.

## Répartition des entrées relatives au revenu d'exploitation, 1974-1979

Les données de l'industrie des entrepreneurs de grande route, chemin, rue et pont sont disponibles pour les années 1970-1979 inclusive. Certaines de ces données qui apparaissent dans le graphique 3 ont été choisies dans le but de démontrer le rapport qui existe entre certaines entrées et le revenu total d'exploitation pour les années 1974 à 1979. Le volume en dollars des éléments constituants est aussi exprimé d'après son pourcentage du revenu total d'exploitation pour l'année.

## Échantillon des bilans (tableau 2)

Un échantillon des données relatives au bilan accompagnées de données se rapportant à l'état de revenus et dépenses apparaît dans le tableau 2. L'information a été recueillie de 475 établissements déclarants.

Même si le tableau 2 contient essentiellement des données statistiques recoupées par région ou province et selon la group, establishments having operations in more than one province (i.e., "multiple establishments") are consolidated and published separately on the last page of the table. This special treatment of "multiple establishments" was utilized because satisfactory techniques for allocating their consolidated balance sheet data by region and province were not available.

The 475 establishments included within the balance sheet sample reported total construction revenues of \$2,399,334,078 or 91.9% of the total construction revenue of \$2,609,783,908 reported by all establishments classified to this industry in 1979.

An analysis of the \$1,561,541,522 of assets held by these 475 establishments reveals that the distribution was as follows: cash and short-term investments 6.5%; accounts receivable 30.1%; inventories 7.1% other current assets 7.3%; fixed assets 39.1%; and other long-term assets 9.9%. Total liabilities which amounted to \$986,854,981 were comprised of 62.3% of current liabilities and 37.7% of long-term liabilities. The overall net worth of establishments included within the sample amounted to \$574,686,541.

## **Selected Financial Ratios (Table 3)**

Table 3 presents a series of selected financial ratios based on income statement and balance sheet items reported in Table 2.

While only the more commonly used financial ratios are published in Table 3, basic data for deriving additional ratios are available from Tables 1 and 2.

tranche de taille, les établissements qui ont exécuté des travaux dans plus d'une province (c.-à-d., des établissements "multiples") sont regroupés et publiés séparément sur la dernière page du tableau. Cette présentation distincte des "établissements multiples" a été utilisée vu l'absence de méthodes satisfaisantes pour répartir les données de bilan par région et par province.

Les 475 établissements inclus dans l'échantillon des bilans ont déclaré un montant total de \$2,399,334,078 titre de revenus de construction, soit 91.9% par rapport au montant total de \$2,609,783,908 pour le revenu de construction déclaré par l'ensemble des établissements classés à cette industrie en 1979.

L'analyse de l'actif total de \$1,561,541,522 rapporté par ces 475 établissements indique qu'il était réparti comme suit: encaisse et placements temporaires de fonds, 6.5%, comptes à recevoir, 30.1%; inventaires, 7.1%; autres actifs à court terme, 7.3%; immobilisations, 39.1%; et autres actifs à long terme, 9.9%. Le passif total était de \$986,854,981 et réparti entre passif à court terme avec 62.3% et passif à long terme avec 37.7%. L'ensemble du capital des établissements compris dans l'échantillon s'élevait à \$574,686,541.

## Proportions financières (tableau 3)

Le tableau 3 présente une série de proportions financières provenant des postes de l'état des profits et pertes et du bilan qui apparaissent dans le tableau 2.

Bien que seules les proportions financières les plus souvent utilisées sont publiées au tableau 3, d'autres proportions peuvent être établies d'après les données des tableaux 1 et 2.

|  |                | Type of const                         | ruction - Genre d                        | Other<br>engineering<br>Autres grands<br>travaux<br>de génie |                         |

- La construction au Canada, nº 64-201 au catalogue.
- Includes own account work done by the manufacturing, forestry, mining, agriculture, trade, finance, commercial, housing (including mobile homes) and institutions sectors.
- Comprend les travaux pour compte propre des industries manufacturières, agricoles, de commerce, finances et des services commerciaux, de logement (comprend maisons mobiles) et institutionnels.
- Total construction activity, as published in Construction in Canada, includes expenditures made on contractual services for non-construction work in the oil and gas, mining and housing sectors. Included are expenditures related to exploration and development such as air borne surveys, drilling, catering, etc., as well as acquisition costs relating to
- housing scottering, etc., as well as acquisitorio costs relating to housing construction such as legal and NHA fees, surveying costs, and interest during construction. L'activité totale de construction, paraissant dans La construction au Canada, comprend les dépenses faites au titre des services à forfait pour du travail n'appartenant au domaine de la construction dans les secteurs de l'exploitation pétrolière, gazière, logement et minière. Cela comprend les dépenses relatives à l'exploration et à l'exploitation comme les levés aériens, le forage, les services de traiteurs, etc., ainsi que les frais d'acquisition se rapportant à la construction de logements, tels que frais de la LNH et légaux,
- coûts d'arpentage et intérêts durant la construction. Portion done by real estate developers is an estimate obtained by taking the sales of products (net of sub-contracts as reported in the Corporate Financial Statistics published (4) by Business Finance Division) and adding to this the increase in their gross depreciable assets (buildings), again net of sub-contracts.
- La portion des travaux effectués par les exploitants immobiliers représente une estimation obtenue en ajoutant au produit des ventes (moins les sous-traitants tels qu'ils figurent dans les statistiques financières des sociétés publiées par la Division des finances des entreprises) l'augmentation de leur actif brut amortissable (immeubles), ici encore en faisant exclusion des sous-traitants.
- The methodology used to estimate the value of own account construction work done by homeowners has been revised. As a result, the value has been adjusted upward to include an additional amount of \$2,029 million
- Nous avons revu la méthodologie qui a servi à estimer la valeur de la construction pour compte propre effectuée par les propriétaires. La valeur a donc été redressée vers le haut pour inclure un montant additionel \$2,029 millions
- The information relating to the various industry groups can be found in the appropriate census publications listed at the back of this publication. The data is net of sub-contracts n order to prevent double counting.
- Les renseignements portant sur les divers groupes d'activité se trouvent dans les publications du recensement appropriées énumérées à fin de cette publication. Les données ne font pas état des sous-traitants afin d'empêcher tout double compte.

Table from Construction in Canada, 1979-1981

Represents work done by the labour force of utilities, government departments and other employees not primarily engaged in the construction industry. Beginning in 1969, materials supplied free of charge to contractors by project owners (previously included in "contract construction") are included in other construction. Comprend les travaux effectués par la main-d'oeuvre des Services d'utilité publique, des ministères gouvernementaux et d'autres employeurs qui n'appartiennent pas à l'industrie de la construction. À partir de 1969 la valeur des matériaux de construction fournis gratuitement aux entrepreneurs par les propriétaires des projets de construction (antérieurement incluse dans "construction sous contrat") est comprise dans "autre construction".

### **Footnotes**

- The cross-classification table by size group is based on total gross operating revenue. Information in certain columns does not always add to Canada, regional and provincial totals to meet secrecy requirements of the Statistics Act.
- (2) "Total value of construction output" is equivalent to "Construction revenue".
- (3) "Other" contracts include mining, logging roads, sub-division roads, etc., for private companies.
- (4) "Other construction" includes airport runways, pipelines, dams, hydro-electric projects, etc.
- (5) "Other revenue" includes sale of asphalt and ready mix concrete, gravel pit operations, etc.
- (6) All values in Tables 2 and 3 are at a sample or sub-census level, as defined by establishments reporting balance sheet information.
- (7) Establishments with operations in more than one province are consolidated and published separately on the last page of Table 2 (see table titled "multiple establishments"). This special treatment of "multiple establishments" in Table 2 was utilized because satisfactory techniques for allocating their consolidated balance sheet data by province and region were not available. Accordingly, the figures in the columns of Table 2, Canada, may not agree in certain cases with those published in the corresponding columns of Table 1, Canada.
- (8) "Working capital" is defined as the excess of current assets over current liabilities.
- (9) This size group was established to meet secrecy requirements of the Statistics Act.
- (10) British Columbia includes Yukon and Northwest Territories
- (11) Information has been omitted to meet secrecy requirements of the Statistics Act.
- (12) Total capital employed is the sum of long-term liabilities and equity.

#### Notes

- (1) Le tableau des données recoupées selon la tranche de taille est établi d'après le total du revenu brut d'exploitation. Les données de certaines colonnes n'égalent pas toujours le total pour le Canada, les régions et les provinces afin de satisfaire aux prescriptions de la Loi sur la statistique relatives au secret.
- "Valeur globale du produit de la construction" est équivalent à "revenus de construction".
- (3) "Autres" contrats comprennent les chemins d'accès pour les mines, les chantiers d'exploitation forestière, les rues dans les projets de maisons, etc., pour des sociétés privées.
- (4) "Autres travaux de construction" comprennent les pistes de roulement d'aéroports, les pipes lines, les barrages, les projets hydro-électrique, etc.
- (5) "Autres revenus" comprennent la vente d'asphalte et de béton préparé, les exploitations gravières, etc.
- (6) Toutes les informations dans les tableaux 2 et 3 sont au niveau échantillon ou sous-recensement, définies par les établissements fournissant des informations sur leur bilan.
- (7) Les établissements qui ont exécuté des travaux dans plus d'une province sont regroupés et publiés séparément sur la dernière page du tableau 2 (voir la page intitulée "établissements multiples"). Ce groupement distinct accordé à ces établissements dans le tableau 2 a été utilisé vu l'absence de méthodes satisfaisantes pour faire une répartition par province et par région des données de bilan déclarées sur une base totale seulement. Il s'ensuit que les chiffres qui apparaissent dans les colonnes du tableau 2, Canada, ne comparent pas dans certains cas avec ceux publiés dans les colonnes correspondantes du tableau 1, Canada.
- (8) "Fonds de roulement" est défini par l'excès des actifs à court terme sur les passifs à court terme.
- (9) On a établi cette tranche de taille pour satisfaire aux prescriptions de la Loi sur la statistique relatives au secret.
- (10) La Colombie-Britannique comprend également le Yukon et les Territoires du Nord-Ouest.
- (11) On a omis les données pertinentes pour satisfaire aux prescriptions de la Loi sur la statistique relatives au secret.
- (12) Capital total investi est la somme obtenue lorsqu'on additionne le passif à long terme avec le capital.

#### Data in Many Forms . . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

#### How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Construction Census Section, Construction Division.

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 995-8423) or to the Statistics Canada reference centre in:

| St. John's | (772-4073) | Winnipeg  | (949-4020) |
|------------|------------|-----------|------------|
| Halifax    | (426-5331) | Regina    | (359-5405) |
| Montréal   | (283-5725) | Edmonton  | (420-3027) |
| Ottawa     | (992-4734) | Vancouver | (666-3691) |
| Toronto    | (966-6586) |           |            |

Toll free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional reference centres.

#### How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0V7.

#### Des données sous plusieurs formes . . .

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada

#### Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section du recensement de la construction, Division de la construction,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 995-8423) ou au centre de consultation de Statistique Canada à:

Data on total highway, road, street and bridge construction activity is provided in the Statistics Canada publication Construction in Canada Catalogue 64-201. Text Tables I to V of this catalogue are reproduced from that publication. The sum of items 46 and 80 of Text Table V, amounting to \$3,983 million for 1980, represent this total activity. Total activity comprises the output of the construction industry proper, plus the output by the construction labor forces of establishments classified to other than the construction industry (usually referred to as own account construction). As can be seen, this total is more than the \$2,495 million of highway, road, street and bridge construction contained in this publication (Table 1, items 3 to 7 and 9). This difference is due to the fact that a substantial amount of highway and bridge work is done by the labor forces of the various municipal, provincial and federal government departments  $(25^{\circ}_{e} \text{ to } 30^{\circ}_{e})$ . In addition,  $10^{\circ}_{e}$  to  $15^{\circ}_{e}$  of highway and bridge work is done as secondary construction activity by contractors specializing in other than this type of construction (i.e. heavy engineering and non residential general contractors, trade contractors, etc.). A more detailed reconciliation between construction industry output and construction activity is available from the Construction Division of Statistics Canada.

#### Methodology

In censuses prior to 1975, data were collected by direct survey questionnaire and made available at the reported level only. No estimate was made for nonresponse or for firms not included in the census. It was known, however, that the majority of missing firms were small and that the coverage in terms of dollar volume ranged from  $85^{\circ}c$  to  $90^{\circ}c$  for most of the various sub-industry groups. During the 1975 to 1980 census cycles, a blend of direct survey and systematic sampling methods was used to provide universe level estimates:

for 1980, construction firms were separated by total operating revenue into two groups; those with more than \$500,000 annual revenue and those with annual revenue in the range of \$10,000 to \$500,000. The larger firms received the census long form, of which a sample is provided at the end of this publication. The smaller firms were stratified by sub-industry group, size range and province, from which a representative sample was selected for the collection of financial and non-financial data. The sampling rates varied between 10° and 50° for firms less than \$50,000 annual revenue. Financial data were collected for all firms between \$50,000 and \$500,000 total operating revenue. The financial information was obtained from administrative records provided by Revenue Canada. Non-financial data (i.e., operating characteristics and

Les données sur l'ensemble de la construction de routes, de rues et de ponts sont fournies dans la publication de Statistique Canada intitulée La construction au Canada nº 64-201 au catalogue. Les tableaux explicatifs I à V de la présente publication sont tirés de cette dernière. La somme des items 46 et 80 du tableau V donne la valeur de l'activité totale; celle-ci s'élevait à \$3,983 millions en 1980. L'activité totale comprend les travaux de l'industrie de la construction proprement dite, ainsi que les travaux de construction réalisés par la main-d'oeuvre des établissements qui ne sont pas classés dans l'industrie de la construction (travaux désignés habituellement par le terme de construction pour propre compte). Il est évident que le chiffre global dépasse la valeur des travaux de construction de routes, rues et ponts(\$2,495 millions) qui figure dans la présente publication (items 3 à 7 et 9 du tableau 1). Cette différence réside dans le fait qu'une partie importante de la construction de routes et de ponts est faite par la main-d'oeuvre des administrations municipales, provinciales et fédérale (25% à 30%). En outre, de 10% à 15% de ces travaux sont exécutés à titre d'activité secondaire par des entrepreneurs spécialisés dans d'autres genres de construction (entrepreneurs généraux en gros travaux de génie et en construction non-domiciliaire, sous-traitants, etc.). On peut obtenir un rapprochement plus détaillé de l'industrie et de l'activité de la construction auprès de la Division de la construction de Statistique Canada.

#### Méthodologie

Dans les recensements antérieurs à 1975, les données étaient recueillies par questionnaire direct et rendues disponibles au niveau de déclaration seulement. En d'autres termes, aucune estimation n'était faite pour tenir compte des non répondants ou des entreprises non recensées. On savait toutefois, que la plupart des entreprises omises étaient petites et que le volume, en dollars que représentaient les entreprises incluses, s'échelonnait entre  $85^{\circ}\epsilon$  et  $90^{\circ}\epsilon$  dans les divers sous-groupes de l'industrie. Au cours des recensements de 1975 à 1980, on s'est servi à la fois de l'enquête directe et de l'échantillonnage systématique pour obtenir des estimations représentant l'ensemble de l'univers. Voici un aperçu des méthodes employées à cette fin:

pour 1980, les entreprises de construction ont été partagées en deux groupes selon le montant annuel de leur revenu d'exploitation: plus de \$500,000 et \$10,000 à \$500,000. Les grandes entreprises ont reçu le questionnaire de recensement détaillé, dont un spécimen figure à la fin de cette publication. Les petites entreprises ont, d'autre part, été stratifiées selon le groupe d'activité économique, la taille et la province; dans chaque strate, un échantillon représentatif a été tiré en vue de la collecte des données financières et non financières. Parmi les entreprises dont le revenu annuel était inférieur à \$50,000, la fraction de sondage allait de 10% à 50%. Des données financières ont été obtenues pour toutes les entreprises dont le revenu brut d'exploitation s'échelonnait entre \$50,000 et \$500,000. On a obtenu les renseignements financiers en consultant les documents administratifs de Revenu Canada. Pour recueillir les données non financières (c.-à-d., les caraclabour data) were collected for a sub-sample of this group, numbering approximately 15,000 contractors, by means of an abbreviated survey form. The sample results were inflated to the universe level using the weight associated with each record in the sample. The weight for a record was calculated as the inverse of its probability of inclusion in the sample (sampling rate), corrected for non-response. The large and small firm results were then merged and tabulated to produce the tables contained in this publication.

# The Highway, Road, Street and Bridge Contracting Industry

The 1980 output of the Highway, Road, Street and Bridge Contracting Industry (Table 1) indicates that the 1,087 establishments classified to this construction industry group had total operating revenues of \$3,092,159,331. This figure includes \$2,810,339,471 of construction revenue (including sub-contracts) derived from new, reconstruction and repair work and \$281,819,860 of non-construction operating revenue (e.g., sales of asphalt, ready-mix concrete, sand and gravel, rental of equipment, etc.).

On the basis of work put in place by own labour force (i.e., total construction revenue minus subcontracts), the 1,087 establishments classified to this industry in 1980 were responsible for \$2,373,575,715 of construction work.

The reported values for "total construction revenue" are known to contain some duplication of volume. The latter, in effect, could be reported on two occasions — first, by the general contractor who awarded the sub-contract and, secondly by the general contractor who received the sub-contract. If the contract was awarded to a firm acting primarily as a sub-contractor, then a duplication of volume would not occur as trade contractors are not included in this publication.

# Distribution by Volume of Work Put in Place (Table 1)

In terms of volume put in place, only 311 establishments or 28.6% of all establishments reported net construction revenue (excluding sub-contracts) of \$2,000,000 or more in 1980. Their combined revenues, however, are equivalent to 87.3% of the total construction volume reported by this industry.

By contrast, establishments with net revenues of less than \$1,000,000 numerically represent 60.4% of all establishments, however, the combined value of their revenues amounted to 6.9% of total construction volume. The volume distribution of these size groups is as follows: \$10,000-499,999 (3.0%); \$500,000-749,999 (2.2%); \$750,000-999,999 (1.7%).

téristiques d'exploitation et les données sur la main-d'oeuvre) on a envoyé à un sous-échantillon de ce groupe, comprenant environ 15,000 entrepreneurs, une formule d'enquête abrégée. Les chiffres de l'échantillon ont été gonflés au niveau de l'univers à l'aide du coefficient de pondération lié à chaque document de l'échantillon. Le coefficient d'un document est égal à l'inverse de sa probabilité d'inclusion dans l'échantillon (fraction de sondage), une fois l'imputation de la non-réponse. Les résultats obtenus pour les grandes et petites entreprises ont ensuite été regroupés et totalisés en vue de dresser les tableaux figurant dans la présente publication.

# L'industrie des entrepreneurs de grande route, chemin, rue et pont

Le produit 1980 de l'industrie des entrepreneurs de grande route, chemin, rue et pont (tableau 1) nous démontre que les 1,087 établissements classés dans ce groupe de la construction, ont totalisé des revenus d'exploitation de \$3,092,159,331. Ce chiffre comprend \$2,810,339,471 de revenus pour construction neuve, réfection et réparation (y compris les travaux confiés aux sous-traitants) et \$281,819,860 de revenus pour des activités ne relevant pas de la construction (telles que vente d'asphalte, de béton préparé, de sable, de gravier, location d'équipement, etc.).

Si l'on ramène les travaux de construction exécutés par les 1,087 établissements classés à cette industrie en 1980 à la valeur totale des travaux exécutés par leur propre maind'oeuvre (c.-à-d., si l'on déduit la valeur des travaux confiés à des sous-traitants des revenus provenant de la construction), on constate qu'ils s'élevaient à \$2,373,575,715.

On sait que certains volumes sont compris plus qu'une fois dans le "total des revenus de construction". En effet, la valeur de ces travaux peut être déclarée à deux occasions — premièrement, par les entrepreneurs généraux qui confient des sous-contrats et deuxièmement, par les entrepreneurs généraux qui reçoivent de tels sous-contrats. Cependant, si les sous-contrats sont accordés à des firmes qui exercent principalement les fonctions d'un sous-traitant, le volume n'apparait qu'une seule fois étant donné que les entrepreneurs de métiers spécialisés ne sont pas inclus dans ce bulletin.

#### Répartition du volume des travaux exécutés (tableau 1)

Pour ce qui est du volume des travaux exécutés, les 311 établissements qui ont déclaré avoir en montant net (à l'exclusion des travaux confiés aux sous-traitants) des revenus de construction de \$2,000,000 ou plus en 1980 représentaient  $28.6\,^{c_o}$  seulement de l'ensemble des établissements. Le total des revenus qu'ils ont reçus s'élevait cependant à 87.3 % du volume total des travaux de construction déclarés par toutes les entreprises classées dans ce groupe de l'industrie.

À l'opposé, les établissements dont le total des revenus nets était inférieur à \$1,000,000, représentaient 60.4% des établissements, alors que le total de leurs revenus n'était que 6.9% du volume total des travaux de construction. La répartition du volume dans ces tranches de taille est la suivante: \$10,000-499,999 (3.0%); \$500,000-749,999 (2.2%); \$750,000-999,999 (1.7%).

Analysis of the other size categories reveals that 69 establishments or 6.4% with net revenues of \$1,000,000-\$1,499,999 contributed 2.9% of the total volume whereas the remaining 50 establishments in the \$1,500,000-\$1,999,999 size range represented 4.6% and 2.9% respectively of the establishments and total construction volume.

#### **Type of Construction**

Chart 1 provides a breakdown of the highway, road, street and bridge contracting industry's 1979 output by type of construction on the basis of total construction revenue.

#### Levels of Profit and Loss

Summarized in Chart 2 are the 1980 highway, road, street and bridge contracting industry levels of total profit (before loss), net profit and loss for Canada and the ten provinces. The provinces are arranged in ascending order on the graph on the basis of their individual total profit level.

# Distribution of Inputs to Total Operating Revenue, 1975-1980

Data for the highway, road, street and bridge contracting industry are currently available for the years 1970-1980. A selected portion of this data showing the relationship of certain inputs to total operating revenue is illustrated in Chart 3 for the 1975 to 1980 census years. The dollar value of each component is also expressed as a percentage of the related total operating revenue for each year.

#### Balance Sheet Sample (Table 2)

A sample of balance sheet information for 458 establishments with related income statement data appears in Table 2.

While Table 2 is primarily a cross-classification of statistical data by region or province and by size group, establishments having operations in more than one province (i.e., "multiple establishments") are consolidated and published separately on the last page of the table. This special treatment of "multiple establishments" was utilized because satisfactory techniques for allocating their consolidated balance sheet data by region and province were not available.

The 458 establishments included within the balance sheet sample reported total construction revenues of \$2,636,371,391 or 93.8% of the total con-

L'analyse des autres tranches de taille démontre que 69 établissements ou  $6.4\,^\circ c$  avec des revenus nets de \$1,000,000-1,499,999 ont contribué  $2.9\,^\circ c$  du volume total. Enfin, les autres 50 établissements qui ont enregistré des revenus nets de \$1,500,000-1,999,999 représentaient  $4.6\,^\circ c$  et  $2.9\,^\circ c$  relativement à l'ensemble des établissements et au volume total des travaux de construction.

#### Genre de construction

Le graphique 1 démontre la répartition des genres de construction exécutés par les entrepreneurs de grande route, chemin, rue et pont selon les revenus de construction en 1979.

#### Niveaux des bénéfices et pertes

Le graphique 2 représente pour l'année 1980 les niveaux de bénéfices totaux (avant pertes), bénéfices nets et pertes pour le Canada et les dix provinces pour les entrepreneurs de grande route, chemin, rue et pont. Les provinces sont rangées dans le graphique selon l'importance individuelle de leur bénéfice total.

# Répartition des entrées relatives au revenu d'exploitation, 1975-1980

Les données de l'industrie des entrepreneurs de grande route, chemin, rue et pont sont disponibles pour les années 1970-1980 inclusive. Certaines de ces données qui apparaissent dans le graphique 3 ont été choisies dans le but de démontrer le rapport qui existe entre certaines entrées et le revenu total d'exploitation pour les années 1975 à 1980. Le volume en dollars des éléments constituants est aussi exprimé d'après son pourcentage du revenu total d'exploitation pour l'année.

#### Échantillon des bilans (tableau 2)

Un échantillon des données relatives au bilan accompagnées de données se rapportant à l'état de revenus et dépenses apparaît dans le tableau 2. L'information a été recueillie de 458 établissements déclarants.

Même si le tableau 2 contient essentiellement des données statistiques recoupées par région ou province et selon la tranche de taille, les établissements qui ont exécuté des travaux dans plus d'une province (c.-à-d., des établissements "multiples") sont regroupés et publiés séparément sur la dernière page du tableau. Cette présentation distincte des "établissements multiples" a été utilisée vu l'absence de méthodes satisfaisantes pour répartir les données de bilan par région et par province.

Les 458 établissements inclus dans l'échantillon des bilans ont déclaré un montant total de \$2,636,371,391 titre de revenus de construction, soit 93.8% par rapport au montant

struction revenue of \$2,810,339,471 reported by all establishments classified to this industry in 1980.

An analysis of the \$1,840,966,501 of assets held by these 458 establishments reveals that the distribution was as follows: cash and short-term investments 7.3%; accounts receivable 26.3%; inventories 8.9% other current assets 9.3%; fixed assets 38.9%; and other long-term assets 9.3%. Total liabilities which amounted to \$1,234,460,825 were comprised of 59.1% of current liabilities and 40.9% of long-term liabilities. The overall net worth of establishments included within the sample amounted to \$606,505,676.

## Selected Financial Ratios (Table 3)

Table 3 presents a series of selected financial ratios based on income statement and balance sheet items reported in Table 2.

While only the more commonly used financial ratios are published in Table 3, basic data for deriving additional ratios are available from Tables 1 and 2.

total de \$2,810,339,471 pour le revenu de construction déclaré par l'ensemble des établissements classés à cette industrie en 1980.

L'analyse de l'actif total de \$1,840,966,501 rapporté par ces 458 établissements indique qu'il était réparti comme suit: encaisse et placements temporaires de fonds, 7.3%, comptes à recevoir, 26.3%; inventaires, 8.9%; autres actifs à court terme, 9.3%; immobilisations, 38.9%; et autres actifs à long terme, 9.3%. Le passif total était de \$1,234,460,825 et réparti entre passif à court terme avec 59.1% et passif à long terme avec 40.9%. L'ensemble du capital des établissements compris dans l'échantillon s'élevait à \$606,505,676.

### Proportions financières (tableau 3)

Le tableau 3 présente une série de proportions financières provenant des postes de l'état des profits et pertes et du bilan qui apparaissent dans le tableau 2.

Bien que seules les proportions financières les plus souvent utilisées sont publiées au tableau 3, d'autres proportions peuvent être établies d'après les données des tableaux 1 et

Table from Construction in Canada, 1980-1982.

Represents work done dy the about rock of utilities, government departments and other employees not primarily engaged in the construction industry. Degining in 1905, materials supplied free of charge to contractors by project owners (previously included in "contract construction") are included in other construction. Comprend les travaux effectués par la main-d'oeuvre des Services d'utilité publique, des ministères gouvernementaux et d'autres employeurs qui n'appartiennent pas à l'industrie de la construction. À partir de 1969 la valeur des matériaux de construction fournis gratuitement aux entrepreneurs par les propriétaires des projets de construction (antérieurement incluse dans "construction sous contrat") est comprise dans "autre construction"

 Actual expenditures 1978-1980.
 Dépenses réelles en 1978-1980.
 "Other engineering", item 87 contains structures which would not be published in their specific categories due to the secrecy provisions of the Statistics Act.
 Le poste 87 (autres travaux de génie) comprend des constructions qui ne peuvent être rangées dans leurs catégories propres en vertu des dispositions de la Loi sur la statistique relatives au secret.

# Distribution by Type of Construction, Canada, 1980 Répartition selon le genre de construction, Canada, 1980

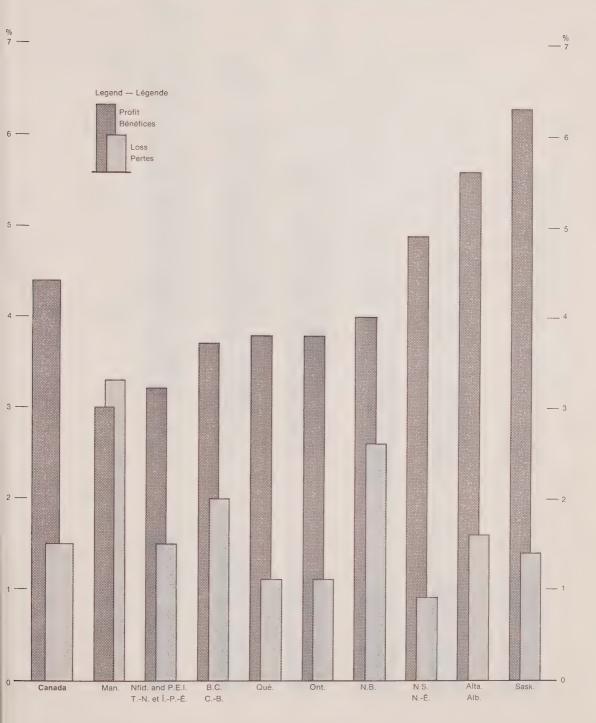

Legend — Légende

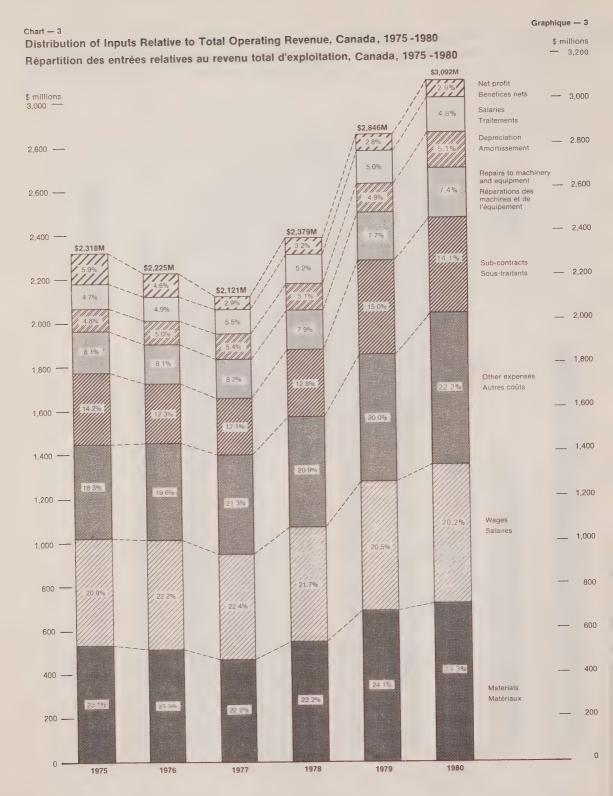

- (1) Includes sewers and watermains, parking lots and driveways, buildings, airport runways, etc.
- (1) Comprend égouts et tuyaux d'aqueduc, parcs de stationnement et entrées de cour, bâtiments, pistes d'aéroport, etc.

Chart — 2
Levels of Profit and Loss Relative to Total Operating Revenue, Canada and Provinces, 1980
Niveau des bénéfices et pertes relatifs au revenu total d'exploitaion, Canada et provinces, 1980

See footnote(s) at end of tables. - Voir note(s) à la fin des tableaux.

#### **Footnotes**

- The cross-classification table by size group is based on total gross operating revenue. Information in certain columns does not always add to Canada, regional and provincial totals to meet secrecy requirements of the Statistics Act.
- (2) "Total value of construction output" is equivalent to "Construction revenue".
- (3) "Other" contracts include mining, logging roads, sub-division roads, etc., for private companies.
- (4) "Other construction" includes airport runways, pipelines, dams, hydro-electric projects, etc.
- (5) "Other revenue" includes sale of asphalt and ready mix concrete, gravel pit operations, etc.
- (6) All values in Tables 2 and 3 are at a sample or sub-census level, as defined by establishments reporting balance sheet information.
- (7) Establishments with operations in more than one province are consolidated and published separately on the last page of Table 2 (see table titled "multiple establishments"). This special treatment of "multiple establishments" in Table 2 was utilized because satisfactory techniques for allocating their consolidated balance sheet data by province and region were not available. Accordingly, the figures in the columns of Table 2, Canada, may not agree in certain cases with those published in the corresponding columns of Table 1, Canada.
- (8) "Working capital" is defined as the excess of current assets over current liabilities.
- (9) This size group was established to meet secrecy requirements of the Statistics Act.
- (10) British Columbia includes Yukon and Northwest Territories.
- Information has been omitted to meet secrecy requirements of the Statistics Act.
- (12) Total capital employed is the sum of long-term liabilities and equity.

#### Notes

- (1) Le tableau des données recoupées selon la tranche de taille est établi d'après le total du revenu brut d'exploitation. Les données de certaines colonnes n'égalent pas toujours le total pour le Canada, les régions et les provinces afin de satisfaire aux prescriptions de la Loi sur la statistique relatives au secret.
- (2) "Valeur globale du produit de la construction" est équivalent à "revenus de construction".
- (3) "Autres" contrats comprennent les chemins d'accès pour les mines, les chantiers d'exploitation forestière, les rues dans les projets de maisons, etc., pour des sociétés privées.
- (4) "Autres travaux de construction" comprennent les pistes de roulement d'aéroports, les pipes lines, les barrages, les projets hydro-électrique, etc.
- (5) "Autres revenus" comprennent la vente d'asphalte et de béton préparé, les exploitations gravières, etc.
- (6) Toutes les informations dans les tableaux 2 et 3 sont au niveau échantillon ou sous-recensement, définies par les établissements fournissant des informations sur leur bilan.
- (7) Les établissements qui ont exécuté des travaux dans plus d'une province sont regroupés et publiés séparément sur la dernière page du tableau 2 (voir la page intitulée "établissements multiples"). Ce groupement distinct accordé à ces établissements dans le tableau 2 a été utilisé vu l'absence de méthodes satisfaisantes pour faire une répartition par province et par région des données de bilan déclarées sur une base totale seulement. Il s'ensuit que les chiffres qui apparaissent dans les colonnes du tableau 2, Canada, ne comparent pas dans certains cas avec ceux publiés dans les colonnes correspondantes du tableau 1, Canada.
- (8) "Fonds de roulement" est défini par l'excès des actifs à court terme sur les passifs à court terme.
- (9) On a établi cette tranche de taille pour satisfaire aux prescriptions de la Loi sur la statistique relatives au secret.
- (10) La Colombie-Britannique comprend également le Yukon et les Territoires du Nord-Ouest.
- (11) On a omis les données pertinentes pour satisfaire aux prescriptions de la Loi sur la statistique relatives au secret.
- (12) Capital total investi est la somme obtenue lorsqu'on additionne le passif à long terme avec le capital.

Les entrepreneurs de grande route, chemin, rue et pont

#### Data in Many Forms . . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

#### How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Construction Census Section, Construction Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 995-8423) or to the Statistics Canada reference centre in:

| St. John's | (772-4073) | Sturgeon Falls | (753-4888) |
|------------|------------|----------------|------------|
| Halifax    | (426-5331) | Winnipeg       | (949-4020) |
| Montréal   | (283-5725) | Regina         | (359-5405) |
| Ottawa     | (992-4734) | Edmonton       | (420-3027) |
| Toronto    | (966-6586) | Vancouver      | (666-3691) |

Toll-free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional reference centres.

#### How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0V7.

#### Des données sous plusieurs formes . . .

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

## Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section du recensement de la construction, Division de la construction,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 995-8423) ou au centre de consultation de Statistique Canada à:

| St. John's | (772-4073) | Sturgeon Falls | (753-4888) |

# Introduction

The highway, road, street and bridge contracting industry, which is the subject of this publication, is one of the component industries covered by Statistics Canada's annual Census of the Construction Industries. Other publications resulting from this census are listed on page 43. For survey purposes, economic activity is subdivided into industries based on specialization of producer groups (a complete definition of principles and industries is available in Statistics Canada's Standard Industrial Classification, catalogue number 12-501). Accordingly, the Construction Industry segment dealt with in this document is defined as consisting of all establishments primarily engaged in the construction and repair of highways, roads, streets, bridges and airport runways.

In addition to the primary specializations, this industry derives revenues from other types of contract construction, such as sewers, watermains and residential or non-residential building; as well as from other operations, such as sales of asphalt, aggregate or ready mix concrete, equipment rentals and snow clearing. Figure I illustrates the distribution of the contract portion of revenues.

The construction activity of the highway, road, street and bridge contracting industry is only a portion of the total value of construction performed in these categories. A substantial amount of highway and bridge work is done by the labour forces of the various municipal, provincial and federal government departments, particularly in the areas of repair, maintenance, materials supply, planning and design. The total volume of this portion, often referred to as own account construction, amounts to 25 to 30 percent of the total put in place nationally. In addition, some 10 to 15 percent of highway and bridge work is performed as a secondary construction activity by contractors specializing in other types of construction (such as heavy engineering or non-residential building).

# Introduction

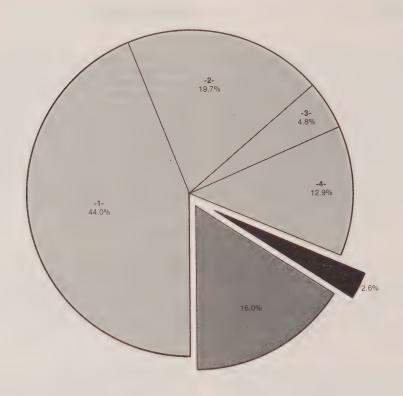

L'industrie de la construction de grandes routes, de chemins, de rues et de ponts, qui fait l'objet de cette publication, est une des industries visées par le recensement des industries de la construction que Statistique Canada effectue annuellement. On trouvera à la page 43 les titres d'autres publications qui découlent de ce recensement. Aux fins de l'enquête, l'activité économique est divisée en industries sur la base de la spécialisation des groupes producteurs (on trouvera une définition complète des principes et des industries dans la "Classification type des industries" de Statistique Canada, nº 12-501 au catalogue). En conséquence, la portion de l'industrie de la construction dont traite le présent document est définie comme formée de toutes les entreprises principalement engagées dans la construction et la réparation de grandes routes, de chemins, de rues, de ponts et de pistes d'aéroport.

En plus de ses principaux domaines de spécialisation, cette industrie tire des revenus d'autres genres de construction à contrat, tels que les égouts, les conduites d'eau et la construction de bâtiments domiciliaires ou autres, ainsi que d'autres opérations, comme la vente d'asphalte, de granulat ou de béton préparé, la location de matériel et le déneigement. La figure I montre la distribution des revenus provenant de contrats.

L'activité de construction de l'industrie des entrepreneurs de grandes routes, chemins, rues et ponts ne représente qu'une partie de la valeur totale de la construction exécutée dans ces catégories. Le personnel des divers services municipaux, provinciaux et fédéraux réalise une part considérable des travaux qu'exigent les grandes routes et les ponts, principalement pour la réparation, l'entretien, la fourniture de matériel, la planification et la conception. Cette part, souvent appelée construction pour propre compte, compte au total pour 25 à 30% des travaux réalisés à l'échelle du pays. De plus, des entrepreneurs spécialisés dans d'autres types de construction (entrepreneurs en gros travaux de génie ou en construction non domiciliaire) réalisent, à titre d'activité de construction secondaire, environ 10 à 15% des travaux de construction de routes et de ponts.

<sup>(1)</sup> Comprend égouts et tuyaux d'aqueduc, parcs de stationnement et entrées de cour, bâtiments, pistes d'aéroport, etc.

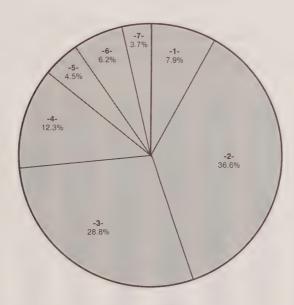

Data on total highway, road, street and bridge construction are provided in the Statistics Canada publication "Construction in Canada" (catalogue number 64-201). The text tables I to IV, below, are reproduced from that publication. Figure II presents a breakdown of the total construction program for 1981, by major structure groups, based on the data in text table IV.

On trouvera des données sur l'activité totale de construction de grandes routes, chemins, rues et ponts dans la publication de Statistique Canada "Construction au Canada" (numéro 64-201 au catalogue). Les tableaux explicatifs I à IV qui suivent sont reproduits de cette publication. La figure II présente une ventilation du total de la construction en 1981, selon le genre de construction, en se fondant sur les données du tableau explicatif IV.

The 7.9% of total construction activity, shown in the figure above, for highway, road and bridge construction, represents an absolute value of \$4,506,222,000 out of a total of \$56,883,932,000 for the total 1981 Canadian construction program (lines 46 to 49 plus 80, divided by the total line in text table IV). This value includes the industry output of \$2,884,553,928 (table 1, items 3 to 7 plus 9) as well as other industries' output and own account, as related earlier.

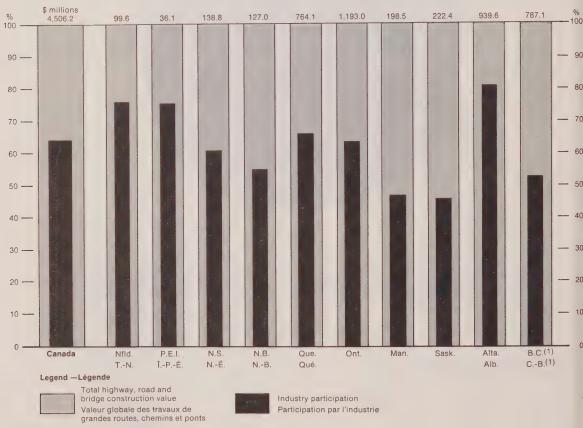

The proportion, by province, that the industry commands of the total market is reflected in figure III.

Le 7.9% des activités totales de construction, indiqué dans la figure ci-dessus pour la construction de grandes routes, chemins, rues et ponts, représente, en valeur absolue, \$4,506,222,000, sur un total de \$56,883,932,000 pour l'ensemble de la construction au Canada en 1981 (la somme des lignes 46 à 49 et 80, divisée par le total du tableau explicatif IV). Ce montant comprend la production de l'industrie, qui s'élève à \$2,884,553,928 (tableau 1, postes 3 à 7, plus 9) ainsi que la production d'autres industries et la production à propre compte, tels qu'indiqués plus haut.

La figure III donne, par province, la proportion du marché total de la construction de grandes routes, chemins, rues et ponts réalisée par l'industrie elle-même.

Figure III
Output of the Highway, Road and Bridge Construction Industry as a Percent
of Provincial Highway, Road and Bridge Construction Put in Place, 1981

Pourcentages provinciaux de la construction de grandes routes, chemins et ponts comparativement aux données de l'industrie en construction de grandes routes, chemins et ponts pour l'année, 1981

(1) British Columbia includes Yukon and Northwest Territories.

(1) La Colombie-Britannique comprend également le Yukon et les Territoires du Nord-Ouest.

A detailed reconciliation between construction industry output and construction activity is available from the Construction Division of Statistics Canada.

On peut obtenir de la Division de la construction de Statistique Canada une conciliation détaillée de la production de l'industrie de la construction et de l'activité de la construction.

Census results for 1981 indicate that road builders performed \$3,282,396,226 worth of construction work (Statistical table 1). This figure includes \$524,257,025 of work subcontracted out to general or trade contractors. Additionally, a volume of \$264,483,996 of other revenues was generated, making the total operating revenue for the industry \$3,546,880,222. On the basis of work put in place by own labour force (i.e. total construction revenue minus sub-contracts), the 1,203 establishments classified to this industry in 1981 were responsible for \$2,758,139,201 of construction. The reported values for total construction revenue are known to contain some duplication of volume. The latter, in effect, could be reported on two occasions, first by the general contractor who sub-contracted out a certain portion of a project, and secondly by the general contractor to whom this same portion was awarded. If the contract was awarded to a firm acting primarily as a subcontractor, then no danger of volume duplication exists, as trade contractors are not included in this census group.

With highways being largely a provincial jurisdiction, 55.5% or \$2,499,184,000 of the total highway construction value for 1981 (\$4,506,222,000 text table IV) was acquired by this level of government. Of this volume, \$1,444,091,336 worth of roadwork was produced by the road building industry (statistical Table 1, item 3). Thus, although (as we have seen in figure I) provincial government contracts are the largest single source of contract revenue for the industry, provincial government own account construction, preconstruction planning and design and prime subcontract activity still creates a major portion of nationally constructed highways.

Statistical table 1 provides industry characteristics by province and by size groups. The size group data can be used for performance appraisal by individual firms in the industry and they form a basis for economic analysis in such areas as concentration and business size. The largest 173 operations produce 72.5% of total output, the largest 336 produce 87.1% and the largest 397 produce 90.1%. With a 100 firm concentration ratio running at around 60% the industry compares favourably in terms of competitiveness with other industries such as manufacturing. Considerations of profit to assets ratios at the total Canada level (as in statistical table 3) would indicate a business size of between \$1,500,000 and \$1,999,999 dollars revenue size to have an optimum size in this industry.

An increase in productivity among the larger size groups, indicates some returns to scale. Compared to other construction industry sub-groups, this industry consists of a relatively small number of larger establishments, and expansion of output is to a great extent

Les résultats du recensement de 1981 indiquent que les constructeurs de routes ont réalisé pour \$3,282,396,226 de travaux de construction (tableau statistique 1). Ce chiffre comprend \$524,257,025 de travaux cédés en sous-traitance à des entrepreneurs généraux ou spécialisés. De plus, ces établissements avaient d'autres recettes qui se chiffraient à \$264,483,996 ce qui porte à \$3,546,880,222 les revenus de fonctionnement totaux de l'industrie. En ne prenant en compte que les travaux réalisés par leur propre personnel (c.-à-d. le total des revenus de construction moins la soustraitance), les 1203 établissements classés dans cette industrie en 1981 ont réalisé pour \$2,758,139,201 de construction. Nous savons que le "total des revenus de construction" déclaré contient une certaine quantité de déclarations en double. Certains travaux pourraient en effet être déclarés deux fois, d'abord par l'entrepreneur général qui a cédé en sous-traitance une certaine partie du projet, puis par l'entrepreneur général qui a réalisé le travail en sous-traitance. Si le contrat a été adjugé à une entreprise agissant principalement comme sous-traitant, il n'existe aucun danger de double déclaration, étant donné que les entrepreneurs spécialisés ne sont pas compris dans cette catégorie d'enquêtés.

Comme les grandes routes sont principalement de juridiction provinciale, 55.5% ou \$2,499,184,000 de la valeur totale de la construction de grandes routes réalisée en 1981 (\$4,506,222,000 au tableau IV) est attribuable à ce palier de gouvernement. De ce montant, l'industrie de la construction de routes en a produit pour \$1,444,091,336 de travaux de routes (tableau statistique 1, poste 3). Ainsi, bien que (comme nous l'avons vu dans la figure I) les contrats des gouvernements provinciaux soient, pour l'industrie, la plus importante source de revenus tirés de contrats, les activités provinciales de construction pour propre compte, de planification et conception préalables, ainsi que de sous-traitance directe produisent toujours une majeur partie des grandes routes construites au Canada.

Le tableau statistique 1 présente les caractéristiques de l'industrie par province et par tranche de taille. Les données par tranche de taille, en plus de permettre à chaque entreprise de construction d'évaluer son propre rendement, forment la base d'une analyse économique de domaines comme la concentration et la taille des entreprises. Les 173 plus grandes opérations produisent 72.5% de la production totale, les 336 plus grandes en produisent 87.1% et les 397 plus grandes en produisent 90.1%. Avec un taux de concentration pour les 100 principales entreprises d'environ 60%, l'industrie se compare favorablement, sur le plan de la compétitivité, avec d'autres industries comme la fabrication. Si on considère la proportion des bénéfices par rapport aux immobilisations pour l'ensemble du Canada (comme dans le tableau statistique 3), il semble que la taille optimale des entreprises dans cette branche d'activité est celle dont le revenu se situe entre \$1,500,000 et \$1,999,999.

L'augmentation de la productivité chez les groupes de plus grande taille indique qu'il existe un certain rendement d'échelle. Comparativement à d'autres sous-groupes de l'industrie de la construction, cette industrie regroupe un nombre relativement petit de grandes entreprises, et l'augmentaachieved by increasing the scale of operations. Machinery and equipment purchases may not give a clear picture of substitution of capital investment for labour due to a high incidence of equipment rental and leasing. It should be noted that size groups are based on current dollars; this causes an artifical movement toward the larger size groups over time.

Figure IV compares profit levels among the provinces.

tion de la production s'accomplit dans une grande mesure par l'expansion des opérations. Les achats de machines et d'équipement ne donnent pas nécessairement une bonne idée du taux de remplacement de la main d'oeuvre par les immobilisations parce qu'une grande partie de l'équipement est loué. Il faut noter que les tranches de taille sont établies en se fondant sur des chiffres en dollars courants, ce qui produit avec le temps un mouvement artificiel vers les plus grands groupes.

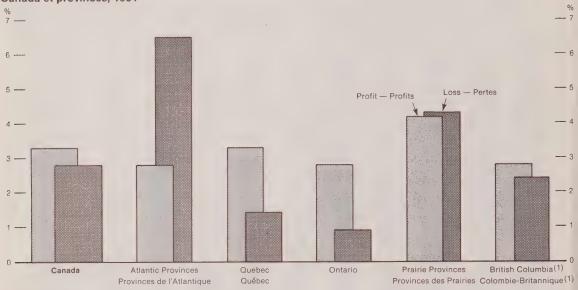

La figure IV compare les niveaux des bénéfices entre les provinces.

Figure IV

Levels of Profit and Loss Relative to Total Operating Revenue,

Canada and Provinces, 1981

Niveaux des bénéfices et pertes relatifs au revenu total d'exploitation, Canada et provinces, 1981

- (1) British Columbia includes Yukon and Northwest Territories.
- (1) La Colombie-Britannique comprend le Yukon et les Territoires du Nord-Ouest.

A sample of balance sheet information for establishments with related income statement data appears in Table 2. While Table 2 is primarily a crossclassification of statistical data by region or province and by size group, establishments having operations in more than one province (i.e., "multiple establishments") are consolidated and published separately on the last page of the table. This special treatment of "multiple establishments" was utilized because satisfactory techniques for allocating their consolidated balance sheet data by region and province were not available.

Table 3 presents a series of selected financial ratios based on income statement and balance sheet items

Le tableau 2 présente un échantillon de données relatives au bilan des établissements et de données connexes tirées d'états des revenus et dépenses. Bien que ce tableau renferme principalement des recoupements de données statistiques par région ou province et par tranche de taille, les données des établissements qui ont des activités dans plus d'une province (les "établissements multiples") sont regroupées et publiées séparément à la dernière page du tableau 2. Ces établissements étaient assujettis à ce traitement spécial faute de méthodes satisfaisantes pour répartir par province et par région les données globales de leurs bilans.

Le tableau 3 présente une série de proportions financières basées sur les postes des états des profits et dépenses et des reported in Table 2. While only the more commonly used financial ratios are published in Table 3, basic data for deriving additional ratios are available from Tables 1 and 2.

## Methodology

In censuses prior to 1975, data were collected by direct survey questionnaire and made available at the reported level only. No estimate was made for non-response or for firms not included in the census. It was known, however, that the majority of missing firms were small and that the coverage in terms of dollar volume ranged from 85% to 90% for most of the various sub-industry groups. For census cycles beginning 1975, a blend of direct survey and random sampling methods is used to provide universe estimates.

For 1981, construction firms were separated by total operating revenue into two groups: Those with more than \$500,000 annual revenue and those with annual revenue in the range of \$10,000 to \$500,000. The larger firms received the census long form, of which a copy is provided at the end of this publication. The smaller firms were stratified by sub-industry group, size range and province, from which a sample was selected for the collection of financial and nonfinancial data. The sampling rates varied between 10% and 50% for firms with less than \$50,000 annual revenue. Financial data were collected for all firms with between \$375,000 and \$500,000 total operating revenue. The financial information was obtained from administrative records provided by Revenue Canada. Non-financial data (i.e. operating characteristics and labour data) were collected for a sub sample of this group, numbering approximately 7,000 contractors, by means of an abbreviated survey form. The sample results were inflated to the universe level using the weight associated with each record in the sample. The weight for a record was calculated as the inverse of its probability of inclusion in the sample (sampling rate). The large and small firms results were then merged and tabulated to produce the tables contained in this publication.

Over the last three years, a comprehensive review was undertaken of sampling procedures, data qualities and methodologies employed in the generation of the Census of the Construction Industry small firm universe. As a result of this review, improvements were made possible. Statistical users familiar with previous year issues of this publication will note that the 1981 data show an increase in population and activity level, some of which is attributable to these improvements.

## **FURTHER INFORMATION**

The data presented in this publication represent only a selected portion of total 1981 statistical information available on the highway, road, street and bilans que renferme le tableau 2. Même s'il ne présente que les proportions financières les plus fréquemment utilisées, les données de base qui se trouvent aux tableaux 1 et 2 permettent de calculer d'autres proportions.

## Méthodologie

Lors des recensements antérieurs à 1975, les données étaient recueillies directement au moyen de questionnaires et diffusées telles quelles. En d'autres termes, aucune estimation n'était faite pour tenir compte des non-répondants ou des entreprises non recensées. On savait toutefois que la plupart des entreprises omises étaient petites et que le volume, en dollars, que représentaient les entreprises recensées se situait entre 85% et 90% pour la plupart des divers sous-groupes de l'industrie. À partir de 1975, on s'est servi pour les recensements à la fois de l'enquête directe et de l'échantillonnage aléatoire pour obtenir des estimations visant l'ensemble de l'univers.

Pour 1981, les entreprises de construction ont été partagées en deux groupes selon le montant annuel de leurs revenus d'exploitation: plus de \$500,000 et \$10,000 à \$500,000. Les grandes entreprises ont reçu le questionnaire de recensement détaillé, qui est reproduit à la fin de cette publication. Les petites entreprises ont, d'autre part, été stratifiées par sousgroupe, tranche de taille et province avant qu'on ne tire, de chaque strate, un échantillon pour la collecte de données financières et autres. Parmi les entreprises dont le revenu annuel était inférieur à \$50,000, la fraction de sondage allait de 10% à 50%. Des données financières ont été obtenues pour toutes les entreprises dont le revenu d'exploitation se situait entre \$375,000 et \$500,000. Elles ont été tirées des dossiers administratifs de Revenu Canada. Pour recueillir les données non financières (c.-à-d. les caractéristiques d'exploitation et les données sur la main-d'oeuvre) on a envoyé à un souséchantillon de ce groupe, comprenant environ 7,000 entrepreneurs, une formule d'enquête abrégée. Les chiffres obtenus de l'échantillon ont été gonflés au niveau de l'univers à l'aide du coefficient de pondération lié à chaque enregistrement de l'échantillon. D'après les calculs, ce coefficient de pondération était égal à l'inverse de la probabilité d'inclusion de l'entreprise dans l'échantillon (fraction de sondage). Les résultats des grandes et des petites entreprises ont ensuite été regroupés et mis en forme pour produire les tableaux de la présente publication.

Au cours des trois dernières années, on a entrepris un examen général des techniques d'échantillonnage, de la qualité des données et des méthodes utilisées pour établir l'univers des petites entreprises du recensement de l'industrie de la construction. Cet examen a permis d'apporter certaines améliorations. Les utilisateurs de statistiques qui connaissent bien cette publication pour en avoir consulté les numéros antérieurs noteront que les données de 1981 indiquent une augmentation de la population et du niveau d'activité, augmentation attribuable en partie à ces améliorations.

## RENSEIGNEMENTS SUPPLÉMENTAIRES

Les données présentées dans cette publication ne constituent qu'une partie de l'information recueillie, pour 1981, sur les entrepreneurs de grandes routes, chemins, rues et ponts. bridge contracting industry. Additional breakdowns, statistics and definitions are available on request to users subject to the conditions of the Statistics Act. Please contact the Construction Division of Statistics Canada.

On peut obtenir sur demande d'autres ventilations, données statistiques et définitions, sous réserve des stipulations de la Loi sur la statistique. Veuillez communiquer, à cette fin, avec la Division de la construction de Statistique Canada.

| 38. Docks, wharves, piers, breakwaters - Bassins, quais, jetées, brise-lames  | 137,449           | 149,197          | 239,809            | 275,967    | 269,361          |
| 39. Retaining walls, embankments, riprapping - Murs de soutènement, digues, enrochements  | 17,977            | 17,590           | 26,266             | 17,223     | 19,034           |
| 40. Canals and waterways - Canaux et voies navigables   | 23,020            | 28,298           | 35,908             | 38,969     | 44,870           |
| 41. Dredging and pile driving - Dragage et battage de pieux   | 19,010            | 34,784           | 34,432             | 80,592     |                  |
| 42. Dyke construction - Construction de digues  | 13,576            | 21,112           | 14,280             | 10,743     | 76,176<br>13,360 |
| 43. Logging booms - Estacades   | 1,814             | 2,279            | 1,825              | 1,624      | 1,815            |
| 44. Other marine construction - Autres constructions maritimes  | 21,642            | 15,958           | 24,262             | 34,511     | 40,157           |
| Road, highway and aerodrome construction - Travaux routiers et aérodromes   | 3,380,189         | 3,730,616        | 4,091,517          | 4,303,976  | 4,306,237        |
| 46. Highway, road and street construction (includes grading, scraping, boiling, filling) – Grandes routes, chemins et rues (terrassement, nivellement, épandage d'huile et remblayage)  | 3,238,187         | 3,553,265        | 3,910,604          | 4,071,075  | 4,039,211        |
| 47. Parking lots - Terrains de stationnement  | 42,129            | 52,868           | 46,977             | 78,270     | 105,744          |
| 48. Sidewalks, paths - Trottoirs, allées  | 66,410            | 73,347           | 75,041             | 81,065     | 86,526           |
| 49. Runways, landing fields, tarmac – Pistes d'envol, terrains d'atterrissage, aires d'embarquement   | 33,463            | 51,136           | 58,895             | 73,566     | 74,756           |
| Waterworks and sewage systems - Canalisations et systèmes d'égoûts  | 1,863,309         | 1,996,450        | 2,144,648          | 2,294,927  | 2,420,845        |
| 51. Tile drains, drainage ditches, storm sewers – Drains, fossés de drainage, égoûts pluviaux   | 450,407           | 504,246          | 580,401            | 542,179    | 514,400          |
| 52. Water mains, hydrants and services — Conduites principales, bouches d'incendie et conduites de branchement  | 501,178           | 542,779          | 606,480            | 683,578    | 731,528          |
| 53. Sewage systems disposal plants and connections – Usines d'épuration, égoûts et raccords   | 639,285           | 663,970          | 664,530            | 733,598    | 836,663          |
| 54. Water pumping stations and filtration plants - Stations de pompage (eau) et usines de filtration  | 251,964           | 261,071          | 268,908            | 298,748    | 299,860          |
| 55. Water storage tanks - Réservoirs (eau)  | 20,475            | 24,384           | 24,329             | 36,824     | 38,394           |
| Dams and irrigation - Barrages et irrigation  | 174,094           | 202,160          | 300,513            | 260,611    | 264,456          |
| 57. Dams and reservoirs - Barrages et barrages-réservoirs   | 58,489            | 61,960           | 130,778            | 91,223     | 100,506          |
| 58. Irrigation and land reclamation projects - Irrigation et mise en valeur des terres  | 115,605           | 140,200          | 169,735            | 169,388    | 163,950          |
| Electric power construction - Réseaux électriques   | 4,279,464         | 4,296,966        | 4,800,872          | 5,427,718  | 5,722,433        |
| 60. Electric power generating plants, including water conveying and controlling structures - Centrales électriques (y compris les conduites d'eau et les dispositifs de régularisation) | 2,609,494         | 2,583,487        | 2,912,054          | 3,281,188  | 3,364,382        |
| 61. Electric transformer stations - Postes de transformation  | 7,871             | 17,547           | 16,636             | 12,426     | 6,968            |
| 62. Power transmission and distribution lines, trolley wires(3) – Lignes de transport de distribution, caténaires(3)  | 1,622,689         | 1,656,295        | 1,819,077          | 2,081,477  | 2,294,886        |
| 63. Street lighting - Eclairage (rues)  | 39,410            | 39,637           | 53,105             | 52,627     | 56,197           |
| See footnote(s) at end of table.  | 1                 |                  |                    |            |                  |

See footnote(s) at end of tables. - Voir note(s) à la fin des tableaux.

## **Footnotes**

- The cross-classification table by size group is based on total gross operating revenue. Information in certain columns does not always add to Canada, regional and provincial totals to meet secrecy requirements of the Statistics Act.
- (2) "Total value of construction output" is equivalent to "Construction revenue".
- (3) "Other" contracts include mining, logging roads, sub-division roads, etc., for private companies.
- (4) "Other construction" includes airport runways, pipelines, dams, hydro-electric projects, etc.
- (5) "Other revenue" includes sale of asphalt and ready mix concrete, gravel pit operations, etc.
- (6) All values in Tables 2 and 3 are at a sample or sub-census level, as defined by establishments reporting balance sheet information.
- (7) Establishments with operations in more than one province are consolidated and published separately on the last page of Table 2 (see table titled "multiple establishments"). This special treatment of "multiple establishments" in Table 2 was utilized because satisfactory techniques for allocating their consolidated balance sheet data by province and region were not available. Accordingly, the figures in the columns of Table 2, Canada, may not agree in certain cases with those published in the corresponding columns of Table 1, Canada.
- (8) "Working capital" is defined as the excess of current assets over current liabilities.
- (9) This size group was established to meet secrecy requirements of the Statistics Act.
- British Columbia includes Yukon and Northwest Territories.
- (11) Information has been omitted to meet secrecy requirements of the Statistics Act.
- (12) Total capital employed is the sum of long-term liabilities and equity.

### Notes

- (1) Le tableau des données recoupées selon la tranche de taille est établi d'après le total du revenu brut d'exploitation. Les données de certaines colonnes n'égalent pas toujours le total pour le Canada, les régions et les provinces afin de satisfaire aux prescriptions de la Loi sur la statistique relatives au secret.
- (2) "Valeur globale du produit de la construction" est équivalent à "revenus de construction".
- (3) "Autres" contrats comprennent les chemins d'accès pour les mines, les chantiers d'exploitation forestière, les rues dans les projets de maisons, etc., pour des sociétés privées.
- (4) "Autres travaux de construction" comprennent les pistes de roulement d'aéroports, les pipes lines, les barrages, les projets hydro-électrique, etc.
- (5) "Autres revenus" comprennent la vente d'asphalte et de béton préparé, les exploitations gravières, etc.
- (6) Toutes les informations dans les tableaux 2 et 3 sont au niveau échantillon ou sous-recensement, définies par les établissements fournissant des informations sur leur bilan.
- (7) Les établissements qui ont exécuté des travaux dans plus d'une province sont regroupés et publiés séparément sur la dernière page du tableau 2 (voir la page intitulée "établissements multiples"). Ce groupement distinct accordé à ces établissements dans le tableau 2 a été utilisé vu l'absence de méthodes satisfaisantes pour faire une répartition par province et par région des données de bilan déclarées sur une base totale seulement. Il s'ensuit que les chiffres qui apparaissent dans les colonnes du tableau 2, Canada, ne comparent pas dans certains cas avec ceux publiés dans les colonnes correspondantes du tableau 1, Canada.
- pondantes du tableau 1, Canada. (8) "Fonds de roulement" est défini par l'excès des actifs à court terme sur les passifs à court terme.
- (9) On a établi cette tranche de taille pour satisfaire aux prescriptions de la Loi sur la statistique relatives au secret.
- (10) La Colombie-Britannique comprend également le Yukon et les Territoires du Nord-Ouest.
- (11) On a omis les données pertinentes pour satisfaire aux prescriptions de la Loi sur la statistique relatives au secret.
- (12) Capital total investi est la somme obtenue lorsqu'on additionne le passif à long terme avec le capital.

### Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

# How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Construction Census Section, Construction Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9812) or to the Statistics Canada reference centre in:

| St. John's | (772-4073) | Sturgeon Falls | (753-4888) |

# Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

# Comment obtenir d'autres renseignements

# Introduction

The highway, road, street and bridge contracting industry, which is the subject of this publication, is one of the component industries covered by Statistics Canada's annual Census of the Construction Industries. Other publications resulting from this census are listed on page 43. For survey purposes, economic activity is subdivided into industries based on specialization of producer groups (a complete definition of principles and industries is available in Statistics Canada's Standard Industrial Classification, Catalogue 12-501). Accordingly, the Construction Industry segment dealt with in this document is defined as consisting of all establishments primarily engaged in the construction and repair of highways, roads, streets, bridges, parking lots and airport runways.

In addition to the primary specializations, this industry derives revenues from other types of contract construction, such as sewers, watermains and residential or non-residential building; as well as from other operations, such as sales of asphalt, aggregate or ready mix concrete, equipment rentals and snow clearing. Figure I illustrates the distribution of the contract portion of revenues.

The construction activity of the highway, road, street and bridge contracting industry is only a portion of the total value of construction performed in these categories. A substantial amount of highway and bridge work is done by the labour forces of the various municipal, provincial and federal government departments, particularly in the areas of repair, maintenance, materials supply, planning and design. The total volume of this portion, often referred to as own account construction, amounts to 25% to 30% of the total put in place nationally. In addition, some 10% to 15% of highway and bridge work is performed as a secondary construction activity by contractors specializing in other types of construction (such as heavy engineering or non-residential building).

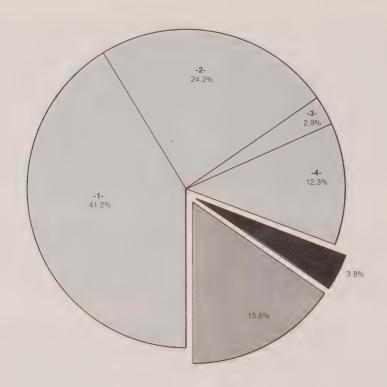

# Introduction

L'industrie de la construction de grandes routes, de chemins, de rues et de ponts, qui fait l'objet de cette publication, est une des industries visées par le recensement des industries de la construction que Statistique Canada effectue annuellement. On trouvera à la page 43 les titres d'autres publications qui découlent de ce recensement. Aux fins de l'enquête, l'activité économique est divisée en industries sur la base de la spécialisation des groupes producteurs (on trouvera une définition complète des principes et des industries dans la Classification type des industries de Statistique Canada, nº 12-501 au catalogue). En conséquence, la portion de l'industrie de la construction dont traite le présent document est définie comme formée de toutes les entreprises principalement engagées dans la construction et la réparation de grandes routes, de chemins, de rues, de ponts, terrains de stationnement et de pistes d'aéroport.

En plus de ses principaux domaines de spécialisation, cette industrie tire des revenus d'autres genres de construction à contrat, tels que les égouts, les conduites d'eau et la construction de bâtiments domiciliaires ou autres, ainsi que d'autres opérations, comme la vente d'asphalte, de granulat ou de béton préparé, la location de matériel et le déneigement. La figure I montre la distribution des revenus provenant de contrats.

L'activité de construction de l'industrie des entrepreneurs de grandes routes, chemins, rues et ponts ne représente qu'une partie de la valeur totale de la construction exécutée dans ces catégories. Le personnel des divers services municipaux, provinciaux et fédéraux réalise une part considérable des travaux qu'exigent les grandes routes et les ponts, principalement pour la réparation, l'entretien, la fourniture de matériel, la planification et la conception. Cette part, souvent appelée construction pour propre compte, compte au total pour 25% à 30% des travaux réalisés à l'échelle du pays. De plus, des entrepreneurs spécialisés dans d'autres types de construction (entrepreneurs en gros travaux de génie ou en construction non domiciliaire) réalisent, à titre d'activité de construction secondaire, environ 10% à 15% des travaux de construction de routes et de ponts.

<sup>(1)</sup> Autres que grandes routes, chemins et ponts.

The 8.5% of total construction activity, shown in the figure above, for highway, road and bridge construction, represents an absolute value of \$4,761,393,000 out of a total of \$56,065,389,000 for the total 1982 Canadian construction program (lines 46 to 49 plus 80, divided by the total line in Text Table IV). The total highway, road and bridge construction value includes the industry output of \$2,990,243,032 (Table 1, items 3 to 7 plus 9) as well as other industries' output and own account, as related earlier.

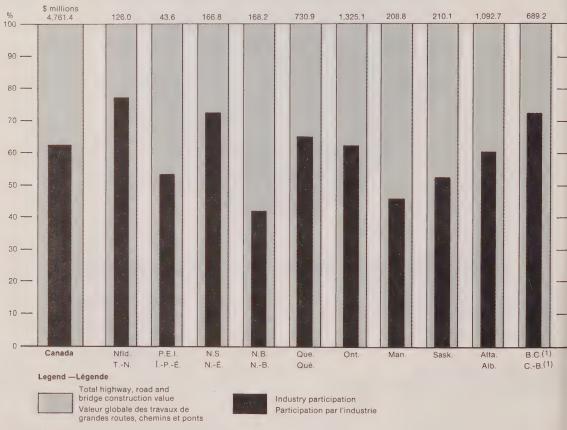

The proportion, by province, that the industry commands of the total market is reflected in Figure III.

Le 8.5% des activités totales de construction, indiqué dans la figure ci-dessus pour la construction de grandes routes, chemins, rues et ponts, représente, en valeur absolue, \$4,761,393,000, sur un total de \$56,065,389,000 pour l'ensemble de la construction au Canada en 1982 (la somme des lignes 46 à 49 et 80, divisée par le total du tableau explicatif IV). La valeur globale des travaux de grandes routes, chemins et ponts comprend la production de l'industrie, qui s'élève à \$2,990,243,032 (tableau 1, postes 3 à 7, plus 9) ainsi que la production d'autres industries et la production à propre compte, tels qu'indiqués plus haut.

La figure III donne, par province, la proportion du marché total de la construction de grandes routes, chemins, rues et ponts réalisée par l'industrie elle-même.

Figure III
Output of the Highway, Road and Bridge Construction Industry as a Percent
of Provincial Highway, Road and Bridge Construction Put in Place, 1982

Pourcentages provinciaux de la construction de grandes routes, chemins et ponts comparativement aux données de l'industrie en construction de grandes routes, chemins et ponts pour l'année, 1982

(1) British Columbia includes Yukon and Northwest Territories.

(1) La Colombie-Britannique comprend également le Yukon et les Territoires du Nord-Ouest.

A detailed reconciliation between construction industry output and construction activity is available from the Construction Division of Statistics Canada. On peut obtenir de la Division de la construction de Statistique Canada une conciliation détaillée de la production de l'industrie de la construction et de l'activité de la construction.

Census results for 1982 indicate that road builders performed \$3,352,662,990 worth of construction work (statistical Table 1). This figure includes \$609,130,835 of work subcontracted out to general or trade contractors. Additionally, a volume of \$308,813,053 of other revenues was generated, making the total operating revenue for the industry \$3,661,476,043 On the basis of work put in place by own labour force (i.e. total construction revenue minus sub-contracts), the 1,381 establishments classified to this industry in 1982 were responsible for \$2,743,532,155 of construction. The reported values for total construction revenue are known to contain some duplication of volume. The latter, in effect, could be reported on two occasions. first by the general contractor who sub-contracted out a certain portion of a project, and secondly by the general contractor to whom this same portion was awarded. If the contract was awarded to a firm acting primarily as a subcontractor, then no danger of volume duplication exists, as trade contractors are not included in this census group.

With highways being largely a provincial jurisdiction, 59.9% or \$2,720,285,000 of the total highway construction value for 1982 (\$4,540,034,000 Text Table IV) was acquired by this level of government. Of this volume, \$1,382,555,237 worth of roadwork was produced by the road building industry (statistical Table 1, item 3). Thus, although (as we have seen in Figure I) provincial government contracts are the largest single source of contract revenue for the industry, provincial government own account construction, preconstruction planning and design and prime subcontract activity still creates a major portion of nationally constructed highways.

Statistical Table 1 provides industry characteristics by province and by size groups. The size group data can be used for performance appraisal by individual firms in the industry and they form a basis for economic analysis in such areas as concentration and business size. The largest 173 operations produce 68.1% of total output, the largest 358 produce 84.6% and the largest 435 produce 88.5%. With a 100 firm concentration ration running at around 55% the industry compares favourably in terms of competitiveness with other industries such as manufacturing. Considerations of profit to assets ratios at the total Canada level (as in statistical Table 3) would indicate a business size of between \$1,000,000 and \$1,499,999 follars revenue size to have an optimum size in this ndustry.

An increase in productivity among the larger size groups, indicates some returns to scale. Compared to other construction industry sub-groups, this industry consists of a relatively small number of larger establishments, and expansion of output is to a great extent

Les résultats du recensement de 1982 indiquent que les constructeurs de routes ont réalisé pour \$3,352,662,990 de travaux de construction (tableau statistique 1). Ce chiffre comprend \$609,130,835 de travaux cédés en sous-traitance à des entrepreneurs généraux ou spécialisés. De plus, ces établissements avaient d'autres recettes qui se chiffraient à \$308,813,053 ce qui porte à \$3,661,476,043 les revenus de fonctionnement totaux de l'industrie. En ne prenant en compte que les travaux réalisés par leur propre personnel (c.-à-d. le total des revenus de construction moins la soustraitance), les 1,381 établissements classés dans cette industrie en 1982 ont réalisé pour \$2,743,532,155 de construction. Nous savons que le "total des revenus de construction" déclaré contient une certaine quantité de déclarations en double. Certains travaux pourraient en effet être déclarés deux fois, d'abord par l'entrepreneur général qui a cédé en sous-traitance une certaine partie du projet, puis par l'entrepreneur général qui a réalisé le travail en sous-traitance. Si le contrat a été adjugé à une entreprise agissant principalement comme sous-traitant, il n'existe aucun danger de double déclaration, étant donné que les entrepreneurs spécialisés ne sont pas compris dans cette catégorie d'enquêtés.

Comme les grandes routes sont principalement de juridiction provinciale, 59.9% ou \$2,720,285,000 de la valeur totale de la construction de grandes routes réalisée en 1982 (\$4,540,034,000 au tableau IV) est attribuable à ce palier de gouvernement. De ce montant, l'industrie de la construction de routes en a produit pour \$1,382,555,237 de travaux de routes (tableau statistique 1, poste 3). Ainsi, bien que (comme nous l'avons vu dans la figure I) les contrats des gouvernements provinciaux soient, pour l'industrie, la plus importante source de revenus tirés de contrats, les activités provinciales de construction pour propre compte, de planification et conception préalables, ainsi que de sous-traitance directe produisent toujours une majeur partie des grandes routes construites au Canada.

Le tableau statistique 1 présente les caractéristiques de l'industrie par province et par tranche de taille. Les données par tranche de taille, en plus de permettre à chaque entreprise de construction d'évaluer son propre rendement, forment la base d'une analyse économique de domaines comme la concentration et la taille des entreprises. Les 173 plus grandes opérations produisent 68.1% de la production totale, les 358 plus grandes en produisent 84.6% et les 435 plus grandes en produisent 88.5%. Avec un taux de concentration pour les 100 principales entreprises d'environ 55%, l'industrie se compare favorablement, sur le plan de la compétitivité, avec d'autres industries comme la fabrication. Si on considère la proportion des bénéfices par rapport aux immobilisations pour l'ensemble du Canada (comme dans le tableau statistique 3), il semble que la taille optimale des entreprises dans cette branche d'activité est celle dont le revenu se situe entre \$1,000,000 et \$1,499,999.

L'augmentation de la productivité chez les groupes de plus grande taille indique qu'il existe un certain rendement d'échelle. Comparativement à d'autres sous-groupes de l'industrie de la construction, cette industrie regroupe un nombre relativement petit de grandes entreprises, et l'augmentaachieved by increasing the scale of operations. Machinery and equipment purchases may not give a clear picture of substitution of capital investment for labour due to a high incidence of equipment rental and leasing. It should be noted that size groups are based on current dollars; this causes an artifical movement toward the larger size groups over time.

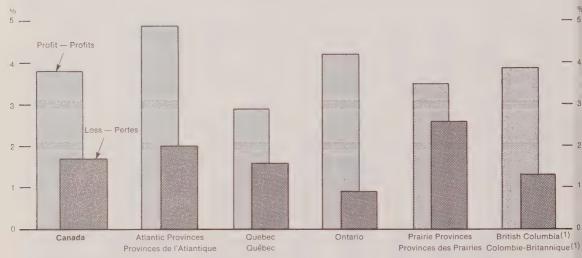

Figure IV compares profit levels among the provinces.

tion de la production s'accomplit dans une grande mesure par l'expansion des opérations. Les achats de machines et d'équipement ne donnent pas nécessairement une bonne idée du taux de remplacement de la main d'oeuvre par les immobilisations parce qu'une grande partie de l'équipement est loué. Il faut noter que les tranches de taille sont établies en se fondant sur des chiffres en dollars courants, ce qui produit avec le temps un mouvement artificiel vers les plus grands groupes.

La figure IV compare les niveaux des bénéfices entre les provinces.

Figure IV
Levels of Profit and Loss Relative to Total Operating Revenue,
Canada and Provinces, 1982

Niveaux des bénéfices et pertes relatifs au revenu total d'exploitation, Canada et provinces, 1982

(1) British Columbia includes Yukon and Northwest Territories.

(1) La Colombie-Britannique comprend le Yukon et les Territoires du Nord-Ouest.

A sample of balance sheet information for establishments with related income statement data appears in Table 2. While Table 2 is primarily a crossclassification of statistical data by region or province and by size group, establishments having operations in more than one province (i.e., "multiple establishments") are consolidated and published separately on the last page of the table. This special treatment of "multiple establishments" was utilized because satisfactory techniques for allocating their consolidated balance sheet data by region and province were not available.

Table 3 presents a series of selected financial ratios based on income statement and balance sheet items

Le tableau 2 présente un échantillon de données relatives au bilan des établissements et de données connexes tirées d'états des revenus et dépenses. Bien que ce tableau renferme principalement des recoupements de données statistiques par région ou province et par tranche de taille, les données des établissements qui ont des activités dans plus d'une province (les "établissements multiples") sont regroupées et publiées séparément à la dernière page du tableau 2. Ces établissements étaient assujettis à ce traitement spécial faute de méthodes satisfaisantes pour répartir par province et par région les données globales de leurs bilans.

Le tableau 3 présente une série de proportions financières basées sur les postes des états des profits et dépenses et des reported in Table 2. While only the more commonly used financial ratios are published in Table 3, basic data for deriving additional ratios are available from Tables 1 and 2.

### **Definitions**

Size groups used in the statistical tables are based on the current period's total gross operating revenue of individual provincial establishments.

New construction or capital expenditures (Text Tables I-IV) represents the total acquisition cost of new durable plant. Included are additions, replacements, alterations, conversions and renovations. All other construction is defined as repair. This consists of non-capitalized outlays made to maintain the operating efficiency of structures and is generally necessitated by damage or deterioration. Minor renovations and alterations are included in repair, but routine care of assets and maintenance are excluded.

Types of construction definitions include the following:

Highways, roads and streets: grading, scraping, oiling, filling, and construction of sidewalks and paths.

Bridges: trestles, culverts, overpasses, viaducts and approach work.

Sewers and watermains: sewage systems, tile drains, drainage ditches, storm sewers, water mains, hydrants and services, and other water and sewer facilities.

Parking lots: open surface area construction only, parking garages are included in non-residential building construction.

Non-residential buildings: light industrial, commercial, institutional and other non-residential buildings.

Residential buildings: single, row, apartment and other residential buildings.

Other construction: airport runways, landing fields and tarmac, as well as any other type of construction, not included in the above structure groups.

# Methodology

In censuses prior to 1975, data were collected by direct survey questionnaire and made available at the reported level only. No estimate was made for non-response or for firms not included in the census. It was known, however, that the majority of missing firms were small and that the coverage in terms of dollar volume ranged from 85% to 90% for most of the

bilans que renferme le tableau 2. Même s'il ne présente que les proportions financières les plus fréquemment utilisées, les données de base qui se trouvent aux tableaux 1 et 2 permettent de calculer d'autres proportions.

# **Définitions**

Les groupes de taille qui figurent dans les tableaux statistiques sont établis selon les recettes d'exploitation brutes totales des établissements provinciaux individuels pour la période courante.

Les nouvelles dépenses de construction ou en immobilisations (voir les tableaux I à IV du texte) représentent le coût d'acquisition total d'une nouvelle installation durable. Sont compris les adjonctions, les remplacements, les modifications, les transformations et les rénovations. Toute autre construction est définie comme étant une réparation. Il s'agit de dépenses non capitalisées faites pour assurer le fonctionnement efficace des ouvrages et généralement occasionnées par des dommages ou par la détérioration. Les rénovations et les modifications mineures sont comprises dans les réparations, mais non l'entretien régulier des biens.

Voici les types de travaux que l'on retrouve dans les genres de constructions:

Grandes routes, chemins et rues: terrassement, nivelement, épandage d'huile, remblayage, trottoirs et allées.

Ponts: chevalets, ponceaux, voies supérieures, viaducs et rampes d'accès.

Égouts et tuyaux d'aqueduc: systèmes d'égouts, drains, fossés de drainage, égouts pluviaux, tuyaux d'aqueduc, bouches d'incendie, conduites de branchement; autres genres de canalisations et de systèmes d'égouts.

Terrains de stationnement: construction de terrains de stationnement ouvert seulement; les édifices de stationnement figurent à la rubrique "bâtiments non-domiciliaires".

Bâtiments non-domiciliaires: bâtiments industriels légers, commerciaux et institutionnels; autres bâtiments non-domiciliaires.

Bâtiments domiciliaires: bâtiments simples, en rangée et appartements; autres bâtiments domiciliaires.

Autres travaux de construction: pistes d'envol, terrains d'atterrissage, aires d'embarquement, terrains de stationnement; autres travaux de construction qui ne sont pas compris ci-dessus.

# Méthodologie

Lors des recensements antérieurs à 1975, les données étaient recueillies directement au moyen de questionnaires et diffusées telles quelles. En d'autres termes, aucune estimation n'était faite pour tenir compte des non-répondants ou des entreprises non recensées. On savait toutefois que la plupart des entreprises omises étaient petites et que le volume, en dollars, que représentaient les entreprises recen-

various sub-industry groups. For census cycles beginning 1975, a blend of direct survey and random sampling methods is used to provide universe estimates.

Construction firms were separated by total operating revenue into two groups: those with more than \$500,000 annual revenue and those with annual revenue in the range of \$10,000 to \$500,000. The larger firms received the census long form, of which a copy is provided at the end of this publication. The smaller firms were stratified by sub-industry group, size range and province, from which a sample was selected for the collection of financial and non-financial data. The sampling rates varied between 10% and 50% for firms with less than \$50,000 annual revenue. Financial data were collected for all firms with between \$375,000 and \$500,000 total operating revenue. The financial information was obtained from administrative records provided by Revenue Canada. Non-financial data (i.e. operating characteristics and labour data) were collected for a sub sample of this group, numbering approximately 10,000 contractors, by means of an abbreviated survey form. The sample results were inflated to the universe level using the weight associated with each record in the sample. The weight for a record was calculated as the inverse of its probability of inclusion in the sample (sampling rate). The large and small firms results were then merged and tabulated to produce the tables contained in this publication.

During 1980 to 1983 a comprehensive review was undertaken of sampling procedures, data qualities and methodologies employed in the generation of the Census of the Construction Industry small firm universe. As a result of this review, several improvements were implemented resulting in better estimates of construction output. Because of this, users of the series are cautioned that universe measures for the years before 1981 are comparatively understated.

## **Further Information**

The data presented in this publication represent only a selected portion of total 1982 statistical information available on the highway, road, street and bridge contracting industry. Additional breakdowns, statistics and definitions are available on request to users subject to the conditions of the Statistics Act. Please contact the Construction Division of Statistics Canada.

sées se situait entre 85% et 90% pour la plupart des divers sous-groupes de l'industrie. À partir de 1975, on s'est servi pour les recensements à la fois de l'enquête directe et de l'échantillonnage aléatoire pour obtenir des estimations visant l'ensemble de l'univers.

Les entreprises de construction ont été partagées en deux groupes selon le montant annuel de leurs revenus d'exploitation: plus de \$500,000 et \$10,000 à \$500,000. Les grandes entreprises ont reçu le questionnaire de recensement détaillé, qui est reproduit à la fin de cette publication. Les petites entreprises ont, d'autre part, été stratifiées par sous-groupe, tranche de taille et province avant qu'on ne tire, de chaque strate, un échantillon pour la collecte de données financières et autres. Parmi les entreprises dont le revenu annuel était inférieur à \$50,000, la fraction de sondage allait de 10% à 50%. Des données financières ont été obtenues pour toutes les entreprises dont le revenu d'exploitation se situait entre \$375,000 et \$500,000. Elles ont été tirées des dossiers administratifs de Revenu Canada. Pour recueillir les données non financières (c.-à-d. les caractéristiques d'exploitation et les données sur la main-d'oeuvre) on a envoyé à un souséchantillon de ce groupe, comprenant environ 10,000 entrepreneurs, une formule d'enquête abrégée. Les chiffres obtenus de l'échantillon ont été gonflés au niveau de l'univers à l'aide du coefficient de pondération lié à chaque enregistrement de l'échantillon. D'après les calculs, ce coefficient de pondération était égal à l'inverse de la probabilité d'inclusion de l'entreprise dans l'échantillon (fraction de sondage). Les résultats des grandes et des petites entreprises ont ensuite été regroupés et mis en forme pour produire les tableaux de la présente publication.

De 1980 à 1983 on a entrepris un examen général des techniques d'échantillonnage, de la qualité des données et des méthodes utilisées pour établir l'univers des petites entreprises du recensement de l'industrie de la construction. Par suite de cet examen, plusieurs améliorations ont été apportées qui ont permis de mieux évaluer les sorties de la construction. C'est pourquoi les utilisateurs de la série sont priés de noter que les mesures de l'univers qui se rapportent aux années précédant 1981 sont relativement sous-évaluées.

## Renseignements supplémentaires

Les données présentées dans cette publication ne constituent qu'une partie de l'information recueillie, pour 1982, sur les entrepreneurs de grandes routes, chemins, rues et ponts. On peut obtenir sur demande d'autres ventilations, données statistiques et définitions, sous réserve des stipulations de la Loi sur la statistique. Veuillez communiquer, à cette fin, avec la Division de la construction de Statistique Canada.

### **Footnotes**

- The cross-classification table by size group is based on total gross operating revenue. Information in certain columns does not always add to Canada, regional and provincial totals to meet secrecy requirements of the Statistics Act.
- (2) "Total value of construction output" is equivalent to "Construction revenue".
- (3) "Other" contracts include mining, logging roads, sub-division roads, etc., for private companies.
- (4) "Other construction" includes airport runways, pipelines, dams, hydro-electric projects, etc.
- (5) "Other revenue" includes sale of asphalt and ready mix concrete, gravel pit operations, etc.
- (6) All values in Tables 2 and 3 are at a sample or sub-census level, as defined by establishments reporting balance sheet information.
- (7) Establishments with operations in more than one province are consolidated and published separately on the last page of Table 2 (see table titled "multiple establishments"). This special treatment of "multiple establishments" in Table 2 was utilized because satisfactory techniques for allocating their consolidated balance sheet data by province and region were not available. Accordingly, the figures in the columns of Table 2, Canada, may not agree in certain cases with those published in the corresponding columns of Table 1, Canada.
- (8) "Working capital" is defined as the excess of current assets over current liabilities.
- This size group was established to meet secrecy requirements of the Statistics Act.
- British Columbia includes Yukon and Northwest Territories.
- (11) Information has been omitted to meet secrecy requirements of the Statistics Act.
- (12) Total capital employed is the sum of long-term liabilities and equity.

### Notes

- (1) Le tableau des données recoupées selon la tranche de taille est établi d'après le total du revenu brut d'exploitation. Les données de certaines colonnes n'égalent pas toujours le total pour le Canada, les régions et les provinces afin de satisfaire aux prescriptions de la Loi sur la statistique relatives au secret.
- (2) "Valeur globale du produit de la construction" est équivalent à "revenus de construction".
- (3) "Autres" contrats comprennent les chemins d'accès pour les mines, les chantiers d'exploitation forestière, les rues dans les projets de maisons, etc., pour des sociétés privées.
- (4) "Autres travaux de construction" comprennent les pistes de roulement d'aéroports, les pipes lines, les barrages, les projets hydro-électrique, etc.
- (5) "Autres revenus" comprennent la vente d'asphalte et de béton préparé, les exploitations gravières, etc.
- (6) Toutes les informations dans les tableaux 2 et 3 sont au niveau échantillon ou sous-recensement, définies par les établissements fournissant des informations sur leur bilan.
- (7) Les établissements qui ont exécuté des travaux dans plus d'une province sont regroupés et publiés séparément sur la dernière page du tableau 2 (voir la page intitulée "établissements multiples"). Ce groupement distinct accordé à ces établissements dans le tableau 2 a été utilisé vu l'absence de méthodes satisfaisantes pour faire une répartition par province et par région des données de bilan déclarées sur une base totale seulement. Il s'ensuit que les chiffres qui apparaissent dans les colonnes du tableau 2, Canada, ne comparent pas dans certains cas avec ceux publiés dans les colonnes correspondantes du tableau 1, Canada.
- (8) "Fonds de roulement" est défini par l'excès des actifs à court terme sur les passifs à court terme.
- (9) On a établi cette tranche de taille pour satisfaire aux prescriptions de la Loi sur la statistique relatives au secret.
- (10) La Colombie-Britannique comprend également le Yukon et les Territoires du Nord-Ouest.
- (11) On a omis les données pertinentes pour satisfaire aux prescriptions de la Loi sur la statistique relatives au secret.
- (12) Capital total investi est la somme obtenue lorsqu'on additionne le passif à long terme avec le capital.

|-----|--|------------------------|-------|------------|
| 7   | Gross revenue from construction operations   |                        |       |            |
| 8   | 8. Other gross operating revenue (e.g. sale of asphalt, ready-mix concrete, sand, gravel, rental of equipment (without the of snow removal, engineering fees, sand blasting, swimming pool service and parts, etc.) Please specify.  | perator),              |       |            |
|     | (a)  |                        |       |            |
|     | (b)  |                        |       |            |
|     | (c)  |                        |       |            |
| 9   | TOTAL GROSS OPERATING REVENUE  |                        |       |            |
|     | EXPENSES  Note: Complete questions 10 and 11 below only if work-in-progress is shown as separate items in the Profit and Loss Statement  | ent                    |       |            |
| 10  | . Work-in-progress at beginning of reporting period  |                        |       |            |
| 11  | . Work-in-progress at end of reporting period (brackets denote subtraction during totalling of this section)   |                        |       | )          |
|     |  |                        |       |            |
| 12  | . Sub-contracts**  (If billings from sub-contractors are not separable from another reported item, please provide best dollar estimate)  |                        |       |            |
| 13  | Materials.  Exclude on site expenses and other direct costs which are not construction materials (e.g. purchase of equipment pa oil, repairs to equipment, rentals, etc.). These costs should be reported in the appropriate items below. Estimate cost of n if actual is not available.   | rts, gas,<br>naterials |       |            |
| 14  | . (a) Gross wages paid to all hourly-rated employees   |                        |       |            |
|     | \$ and ¢   |                        | -     |            |
| 15  | (b) Estimated average hourly rate for all employees whose wages are shown in item 14(a) above  (a) Gross salaries paid (e.g. executives, management and administrative employees, supervisors, etc. including bonu   | ses and                | -     |            |
|     | commissions)   |                        |       |            |
|     | (b) Estimated average annual number of salaried employees whose salaries are shown in item 15(a) above   |                        | 1     |            |
| 16  | Employer contributions to employee welfare and benefit plans:  (Sum of all contributions not included in questions 14(a) and 15(a) above, such as Workmen's Compensation; Unempl Insurance; Canada or provincial pension plan; private pension plan; life, health and accident insurance plan; union vacation and statutory holiday pay, etc; include allowances for travel, board and lodging). | welfare;               |       |            |
| 17. | . Gas, oil and utilities (light, heat, etc.) expenses.   |                        |       |            |
| 18  | . Repair expenditures on all machinery and equipment   |                        |       |            |
| 19  | . Repair expenditures on all buildings and structures  |                        |       |            |
| 20. | . Total depreciation expense on buildings, machinery, equipment, etc.  |                        |       |            |
| 21. | All other expenses not specified above (e.g. interest charges, licences, insurance, hired trucking, equipment rental**, etc.)  |                        |       |            |
| 22  |  |                        |       |            |
| 23. | . NET OPERATING PROFIT BEFORE TAXES (IF LOSS PLEASE BRACKET)   |                        |       |            |
| 24. | . NON-OPERATING MISCELLANEOUS REVENUE (NET) – (IF LOSS PLEASE BRACKET):  |                        |       |            |
|     | (a) Income from construction Joint Venture operations  |                        |       |            |
|     | (b) Other (e.g. bad debts recovered, gain or loss on sale of fixed assets, investment income, etc.)  |                        |       |            |
| 25. | EARNINGS AND WITHDRAWALS OF WORKING OWNERS OR PARTNERS (UNINCORPORATED COMPANIES ONLY)   |                        |       |            |
| 26. | . Were any of the materials reported above in item 13 (e.g. liquid asphalt, granular materials, culverts, guardrails, structure ready-mix concrete, piping etc.) provided to your sub-contractors for installation?  | al steel,              | Yes 🗆 | No         |
| 27. | Were any construction materials installed by your own labour force (e.g. liquid asphalt, granular materials, culverts, gua structural steel, ready-mix concrete, piping, etc.) provided by project owners (e.g. companies, governments, individuals)?  | rdrails,               | Yes 🗆 | No         |

<sup>\*\*</sup>If your firm rented equipment with the operator, the cost of such expenses should be entered under item 12, "Sub-contracts". However, if the rented equipment was supplied without the operator, include under item 21, "All other expenses not specified above".

| Of the revenue from construction operations reported in item 7, page 2, estimate what percentage was derived from:  |           |                                      |
|---|-----------|--------------------------------------|
| a) New construction (including reconstruction)  |           |                                      |
|   |           |                                      |
| ) Repair construction   | -1 - 100  | 61                                   |
| 100   | al = 1009 | 70                                   |
| Please indicate each type of construction performed during the reporting period. (if exact percentages are not available, provide four best estimates).   |           | Type(s                               |
| a. Highways, roads, streets including elevated highways, overpasses, bridges including approach work, parking lots and airport runways:  (a) Highways, roads including elevated highways, overpasses, streets, sidewalks and curbs:   |           | %                                    |
| (i) Provincial Government contracts   | . [0]     |                                      |
| (ii) Local Government contracts   | . [02]    |                                      |
| (iii) Federal Government contracts  | . 03      |                                      |
| (iv) Private company roads (e.g. oil field access roads, logging roads, mining roads, subdivision roads, etc.)  |           |                                      |
| Please specify:   | 04        |                                      |
| (b) Bridges including approach work (separate contracts only)   | 05        | ]                                    |
|   | •         |                                      |
| (c) Parking lots  | . 06      |                                      |
| (d) Airport runways   | . 07      |                                      |
| Other heavy construction:  (e) Electric power facilities (includes hydro-electric stations, nuclear and thermal power plants, communication towers, power dams, cabi installation such as transmission and distribution lines (hydro, telephone, telegraph, underground, marine, cablevision, microwave, etc and other types of energy and power related structures |           |                                      |
| (f) Water and sewer facilities (includes watermains, water treatment and filtration plants, sanitary and storm sewers, storm ditches, sewag plants, pumping stations, water storage tanks, reservoirs, and other types of waterworks and sewage systems)  |           |                                      |
| (g) Gas and oil facilities (includes gas and oil pipelines, refineries, processing plants, pumping stations, gas mains and other types of gas an oil facilities)  |           |                                      |
| (h) Heavy industrial structures: smelters, pulp and paper mills, heavy water plants, steel mills, pelletizing plants, cement plants and othe heavy industrial plants  | 15        |                                      |
| (i) Marine facilities (includes dredging, water control dams, canals, waterways, docks, wharves, piers, breakwaters, retaining walls, embank ments and other types of marine facilities)  | 17        |                                      |
| (j) Other engineering construction: swimming pool installation, irrigation projects, land clearing and draining, mine shafts and other un derground mining facilities, tunnels and subways, railway tracks and roadbeds, tennis courts and other outdoor recreation facilities, parks etc.  | ,         |                                      |
| Please specify:   |           |                                      |
|   | 18        |                                      |
| Building construction: (k) Non residential buildings (warehouses, office buildings, schools, hospitals, etc.)   |           |                                      |
| (l) Residential buildings (single, duplex, triplex, row houses, etc.)   |           |                                      |
| Other construction:   |           |                                      |
| (m) Other construction not shown above.   | 1         |                                      |

## INFORMATION BULLETIN

# **BULLETIN D'INFORMATION**

1982

# THE HEAVY ENGINEERING CONTRACTING INDUSTRY

The heavy engineering contracting industry is defined as consisting of all establishments earning revenue primarily from the construction and repair of heavy construction projects other than buildings. Included are projects such as power generating stations, dams, water mains, sewer lines, oil and gas refineries, pipelines, dredging, docks and other marine facilities; heavy industrial structures such as cement plants, petro-chemical plants, smelters, pulp and paper mills. Highway and road contractors are the subject of a separate census, as shown below.

This information bulletin provides a series of preliminary financial and operational ratios based on statistics taken from early returns in the 1982 census of the industry.

The gross construction output for the establishments included in this bulletin totalled \$3,856 million in 1982. The sample from which the information in the accompanying tables is derived is deemed to be large enough to permit the release of ratios which are not likely to vary appreciably from those pertaining to the completed census. It is anticipated that full census data for this sector will be available in mid-1984. Historical census results are available for this sector covering the period 1975 to 1981 in Statistics Canada Publication *The Heavy Engineering Contracting Industry*, Catalogue 64-209. The information provided relates to the calendar year 1982 but for companies not using the calendar year for accounting purposes, fiscal periods ending between April 1, 1982 to March 31, 1983 are included.

1982

## L'INDUSTRIE DES ENTREPRENEURS EN GROS TRA-VAUX DE GÉNIE

L'industrie des entrepreneurs en gros travaux de génie comprend tous les établissements dont la source primaire de revenu est la construction et la réparation de gros travaux de génie, autre que le bâtiment. Inclus sont les centrales d'énergie, les barrages, conduites d'eau, lignes d'égoûts, raffineries de pétrole et de gaz, pipelines, dragage, quais et autres constructions maritimes; les grosses structures industrielles telles que usines de ciment, usines pétrochimiques, usines d'affinage des métaux, usines de pâte et papier. Les entrepreneurs de grandes routes et de chemins sont le sujet d'un autre recensement, tel qu'indiqué ci-dessous.

Ce bulletin d'information présente une série préliminaire de proportions financières et opérationnelles calculées d'après les données dérivant des rapports, reçus à date, du recensement 1982 sur l'industrie.

Le revenu brut d'exploitation pour les établissements inclus dans ce bulletin s'élevait à \$3,856 millions en 1982. On estime que l'échantillon utilisé pour recueillir les données de ces tableaux est suffisamment grand pour permettre de publier des ratios qui ne devraient pas varier grandement en comparaison de ceux du recensement completé. Les données complètes de recensement pour ce secteur devraient être disponibles vers le milieu de 1984. Les résultats historiques des recensements 1975 à 1981 sont disponibles dans la publication *L'industrie des entrepreneurs en gros travaux de génie*, n<sup>0</sup> 64-209 au catalogue de Statistique Canada. Les données publiées se rapportent à l'année civile 1982 mais pour les entreprises qui n'utilisent pas l'année civile pour fins comptables, celles des périodes fiscales se terminant entre le 1er avril 1982 et le 31 mars 1983 sont également incluses.

January 1984 Catalogue 64-209-P Annual Janvier 1984 Catalogue 64-209-P Annuel

The financial ratios in Table 1 are based on profit and loss and balance sheet data as submitted in the sample, and are aggregated by principal type of construction. The ratios can be used as a standard to compare individual performance by firms. Ratios can also be compared over a number of years in order to provide an insight as to the performance of the industry. Table 2 provides the basis for such an analysis. Here are outlined some of the more significant ratios covering the period 1975-1982.

Table 3 provides additional operational information in ratio form related to revenues, costs, profit and loss classified by type of construction within provinces and regions. Some of these ratios are again summarized at the Canada level, for the years 1975 to 1982, in Table

Heavy Engineering General Contractors comprise one component of the Construction Industry census program currently being conducted by Statistics Canada. This program was initiated in response to various governmental and non-governmental demands to substantially improve the quality and quantity of statistical information on the Construction Industry. For census purposes the industry has been delineated into seven sectors comprising some 46 sub-industry groups. The seven sectors are individually surveyed and results are published as follows:

Further information. Requests for further information, or suggestions, should be addressed to Mr. Claude Robillard (telephone: 613-995-8423), Construction Division, Statistics Canada, Ottawa, Ontario, K1A 0Z6.

The co-operation of the general contractors in the Heavy Engineering Industry is gratefully acknowledged. Their early response to the census made this bulletin possible.

Les proportions financières présentées dans le tableau 1 sont calculées d'après les données recueillies des états de profits et pertes et des bilans et sont rassemblées par genre de construction. Les ratios peuvent servir de modèles aux compagnies qui veulent comparer leur accomplissement à celui de l'industrie. Les ratios peuvent être comparés sur plusieurs périodes pour en arriver à fournir un aperçu tant qu'au fonctionnement de l'industrie. Le tableau 2 démontre le fondement d'un tel rendement. Il trace les proportions les plus significatives pour la période 1975-1982.

Le tableau 3 fournit des données d'exploitation supplémentaires sous forme de proportions opérationnelles portant sur les revenus, les coûts, les profits et les pertes classées selon le genre de construction, par province et région. Certaines de ces proportions financières, au niveau du Canada, pour les années 1975 à 1982, sont résumées au tableau 4.

Le recensement des entrepreneurs généraux en gros travaux de génie est un élément du programme de recensement de l'industrie de la construction que mène couramment Statistique Canada. Ce programme a été lancé pour donner suite aux différentes demandes des secteurs publics et privés en vue d'améliorer de façon appréciable la qualité et la quantité des données statistiques recueillies sur l'industrie de la construction. Aux fins du recensement, l'industrie a été divisée en sept secteurs comportant quelque 46 sous-groupes. Ces sept secteurs sont enquêtés séparément et les résultats sont publiés comme suit:

Autres renseignements. Adresser toute demande de renseignement ou toute suggestion à M. Claude Robillard (téléphone: 613-995-8423), Division de la construction, Statistique Canada, Ottawa (Ontario), K1A 0Z6.

Nous remercions les entrepreneurs généraux qui font partie de l'industrie de la construction en gros travaux de génie de leur collaboration. Une réponse rapide de leur part a permis la préparation de ce bulletin.

# NON-RESIDENTIAL CONTRACTORS

GENERAL BUILDING

Selected Financial and Operational Ratios

Non-residential General Contractors constitute one component of the Construction Industry census program being conducted by Statistics Canada. This program was initiated in response to various governmental and non-governmental demands to substantially improve the quality and quantity of statistical information on the Construction industry.

For the purpose of this census, the Non-Residential General Contractors Industry is defined as all establishments earning revenue primarily from non-residential building activity (i.e., factories, office buildings, schools, hospitals, etc.) as a general contractor. In addition to construction of entirely new structures, this industry includes additions, renovations, alterations and repairs to similar structures. The information provided relates to the calender year 1982 but for companies not using the calender year for accounting purposes, fiscal periods ending between April 1, 1982 and March 31, 1983 are included.

Included in this early data release is financial information relating to the profit and loss and balance sheetstatements. Labour data such as manhours worked, number of salaried employees; operational and organizational data such as types of construction performed by province and size group, structure, type of work and legal entity will become available after completion of the ongoing census.

# ENTREPRENEURS GÉNÉRAUX EN CONSTRUCTION NON-DOMICILIAIRE

Quelques ratios des finances et de l'exploitation

Le recensement des entrepreneurs généraux en construction non-domiciliaire est un élément du programme de recensement de l'industrie de la construction que Statistique Canada est en train de réaliser. Ce programme a été lancé pour donner suite aux différentes demandes des secteurs publics et privés en vue d'améliorer de façon appréciable la qualité et la quantité des données statistiques recueillies sur l'industrie de la construction.

Aux fins de ce recensement, on entend par industrie de la construction non-domiciliaire toutes les entreprises dont le revenu provient principalement de la construction non-domiciliaire (c.-à-d., manufactures, édifices à bureaux, écoles, hôpitaux, etc.) en qualité d'entrepreneurs généraux. Cela ne comprend pas seulement la construction de nouvelles structures mais aussi les rajouts, rénovations, modifications et réparations à ce genre de structures. Les données visent l'année civile 1982 mais, pour les entreprises dont l'exercice ne correspond pas à l'année civile, les exercices financiers se terminant entre le 1er avril 1982 et le 31 mars 1983 sont également pris en compte.

On y trouve les données financières contenues dans les états de profits et pertes et les bilans. Les données sur la maind'oeuvre telles que le nombre d'heures-homme travaillées, le nombre d'employés salariés, etc., ainsi que les données opérationnelles et structurelles comme le genre de construction exécutée par province et tranche de taille, la structure, la nature des activités et les formes juridiques seront disponibles après le parachèvement du recensement en cours.

February 1984 64-207P

Février 1984 64-207P

This release provides information from a sample of 750 general contractors primarily engaged in non-residential building during 1982. These businesses reported revenues during 1982 of \$4.1 billion. It is anticipated that full census data for this sector will be available by mid-1984. However, the sample from which the information in the accompanying tables is derived, is large enough to permit the release of ratios which are not likely to vary appreciably from those derived from the completed census. It should be mentioned that historical data are available for this census group covering the period 1971-1981 in Statistics Canada, Catalogue 64-207.

**Further information.** Requests for further information or suggestions, should be addressed to : Construction Division, Statistics Canada, Ottawa, Ontario, K1A 9Z9. Mr. T. Dempsey, Tel. 995-8423.

On trouvera ici des renseignements fondés sur un échantillon de quelques 750 entrepreneurs généraux dont la construction non-domiciliaire a constitué la principale activité en 1982. Ces firmes ont déclaré des revenus bruts se chiffrant à \$4.1 milliards en 1982. Toutes les données de recensement pour ce secteur devraient sortir vers le milieu de 1984. On croit toutefois que l'échantillon utilisé pour recueillir les données des tableaux annexés est suffisant pour permettre de publier des ratios que ne différeront vraisemblablement guère de ceux tirés du recensement. Il est à mentionner que Statistique Canada présente, pour ce groupe du recensement, des données rétrospectives semblables pour la période de 1971-1981 dans sa publication 64-207.

Autres renseignements. Adresser toute demande de renseignements ou toute suggestion à: Division de la construction, Statistique Canada, Ottawa (Ontario), K1A 9Z9. M. T. Dempsey, tél. 995-8423.

"Capital employed" is the sum of long-term liabilities and equity.

In Table 2 size groups are based on total contract revenue and in Table 3 on total value of work performed.

Dans le tableau 2 les tranches de taille sont basées sur le total des revenus de construction et dans le tableau 3 sur le total des travaux exécutés.

All values in Table 2 are at a sub-sample level, as defined by establishments reporting balance sheet information.

Toutes les informations dans le tableau 2 sont au niveau sous-échantillon, définies par les établissements fournissant des informations de leur bilan. (1) (1) (2) (2) (3) (3) (4) (4)

<sup>&</sup>quot;Capital investi" est la somme obtenue lorsqu'on additionne les passifs à long terme avec le capital.
"Working capital" la defined as current assets minus current liabilities.
"Fonds de roulement" est la différence obtenue lorsqu'on déduit les passifs à court terme des actifs à court terme.

In Table 2 size groups are based on total contract revenue and in Table 3 on total value of work performed.

Dans le tableau 2 les tranches de taille sont basées sur le total des revenus de construction et dans le tableau 3 sur le total des travaux exécutés.

"Other revenue" includes sales of building materials, project management, building rentals and other types of operating revenue.

"Autres revenus" comprennent la vente de matériaux, la gérance de projets, la location de bâtiments et autres genres de revenus d'exploitation.

British Columbia includes Yukon and Northwest Territories.

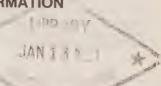

La Colombie-Britannique comprend également le Yukon et les Territoires du Nord-Ouest.

# THE HIGHWAY ROAD STREET AND BRIDGE CONTRACTING INDUSTRY

The highway, road, street and bridge contracting industry is defined as consisting of all establishments earning revenue primarily from the construction, reconstruction or repair of the following types of work: highways including overpasses, access roads and ramps; subsdivision and private company roads; sidewalks and curbs; bridges and related approach work; the paving of commercial parking lots and airport runway construction.

This information bulletin provides a series of preliminary financial and operational ratios based on statistics taken from early returns in the 1982 census of the Industry.

The gross construction output for the establishments included in this bulletin totalled \$1,923 million in 1982. The sample from which the information in the accompanying tables is derived is deemed to be large enough to permit the release of ratios which are not likely to vary appreciably from those pertaining to the completed census. It is anticipated that full census data for this sector will be available in mid-1984. Historical census results are available covering the period 1975 to 1981 in the Statistics Canada Publication The Highway, Road, Street and Bridge Contracting Industry, Catalogue 64-206. The information provided relates to the calendar year 'or accounting purposes, fiscal periods ending between April 1, 1982 to March 31, 1983 are included.

The financial ratios in Table 1 are based on profit and oss and balance sheet data as submitted in the sample, and are aggregated by principal size groups. The ratios an be used as a standard to compare individual perormance by firms. Ratios can also be compared over a number of years in order to provide an insight as to the erformance of the industry. *Table 2* provides the basis or such an analysis. Here are outlined some of the more ignificant ratios covering the period 1975-1982.

anuary 1984 atalogue 64-206-P Annual 1982

## LES ENTREPRENEURS DE GRANDE ROUTE, CHE-MIN, RUE ET PONT

L'industrie des entrepreneurs de grande route, chemin, rue et pont comprend tous les établissements dont la source primaire de revenu est la construction, la réfection ou la réparation de travaux tels que: routes et échangeurs routiers, voies de passage, chemins et rampes d'accès; rues dans les projets d'habitation et chemins d'entreprise privés; trottoirs et bordures; ponts et travaux d'accès connexes; asphaltage des terrains de stationnement commerciaux et pistes d'atterrissage.

Ce bulletin d'information présente une série préliminaire de proportions financières et opérationnelles calculées d'après les données dérivant des rapports, reçus à date, du recensement 1982 sur l'industrie.

Le revenu brut d'exploitation pour les établissements inclus dans ce bulletin s'élevait à \$1,923 millions en 1982. On estime que l'échantillon utilisé pour recueillir les données de ces tableaux est suffisamment grand pour permettre de publier des ratios qui ne devraient pas varier grandement en comparaison de ceux du recensement complété. Les données complètes de recensement pour ce secteur devraient être disponibles vers le milieu de 1984. Les résultats historiques des recensements 1975 à 1981 sont disponibles dans la publication *Entrepreneurs généraux de grande route, chemin, rue et pont,* n<sup>0</sup> 64-206 au catalogue de Statistique Canada. Les données publiées se rapportent à l'année civile 1982 mais pour les entreprises qui n'utilisent pas l'année civile pour fins comptables, celles des périodes fiscales se terminant entre le 1er avril 1982 et le 31 mars 1983 sont également incluses.

Les proportions financières présentées dans le tableau 1 sont calculées d'après les données recueillies des états de profits et pertes et des bilans, et sont rassemblées par tranche de taille. Les ratios peuvent servir de modèles aux compagnies qui veulent comparer leur accomplissement à celui de l'industrie. Les ratios peuvent être comparés sur plusieurs périodes pour en arriver à fournir un aperçu tant qu'au fonctionnement de l'industrie. Le tableau 2 démontre le fondement d'un tel rendement. Il trace les proportions les plus significatives pour la période 1975-1982.

Janvier 1984 Catalogue 64-206-P Annuel

Table 3 provides additional operational information in ratio form related to revenues, costs, profit and loss classified by type of construction within provinces and regions. Some of these ratios are again summarized at the Canada level, for the years 1975 to 1982, in Table

Highway, Road, Street and Bridge General Contractors comprise one component of the Construction Industry census program currently being conducted by Statistics Canada. This program was initiated in reponse to various governmental and non-governmental demands to substantially improve the quality and quantity of statistical information on the Construction Industry. For census purposes the industry has been delineated into seven sectors comprising some 46 sub-industry groups. The seven sectors are individually surveyed and results are published as follows:

Further information. Requests for further information, or suggestions, should be addressed to Mr. Claude Robillard (telephone: 613-995-8423), Construction Division, Statistics Canada, Ottawa, Ontario, K1A 0Z6.

The co-operation of the general contractors in the Highway, Road, Street and Bridge Industry is gratefully acknowledged. Their early response to the census made this bulletin possible.

Le tableau 3 fournit des données d'exploitation supplémentaires sous forme de proportions opérationnelles portant sur les revenus, les coûts, les profits et les pertes classés selon le genre de construction, par province et région. Certaines de ces proportions financières, au niveau du Canada, pour les années 1975 à 1982, sont résumées au tableau 4.

Le Recensement des entrepreneurs généraux dans la contruction de grande route, chemin, rue et pont est un élément du programme de recensement de l'industrie de la construction que mène couramment Statistique Canada. Ce programme a été lancé pour donner suite aux différentes demandes des secteurs publics et privés en vue d'améliorer de façon appréciable la qualité et la quantité des données statistiques recueillies sur l'industrie de la construction. Aux fins du recensement, l'industrie a été divisée en sept secteurs comportant quelque 46 sousgroupes. Ces sept secteurs sont enquêtés séparément et les résultats sont publiés comme suit:

The cross-classification by size group is based on total gross operating revenue.
Les données recoupées selon la tranche de taille sont établies d'après le revenu brut d'exploitation.
All values in Table 1 are at a sub-sample level, as defined by establishments reporting balance sheet information.
Toutes les informations dans le tableau 1 sont au niveau sous-échantillon, définies par les établissements fournissant des informations de leur bilan.
"Working capital" is défined as current assets minus current liablifise.
"Fonds de roulement" est la différence obtenue lorsqu'on déduit les passifs à court terme des actifs à court terme.

## Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machinereadable data base and retrieval system.

#### How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Construction Census Section, Industry Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9814) or to the Statistics Canada reference centre in:

| St. John's            | (772-4073)                   | Sturgeon Falls | (753-4888) |

## How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6.

1(613)990-8114 1(613)990-8115

## Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

## Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section du recensement de la construction, Division de l'industrie,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9814) ou au centre de consultation de Statistique Canada à:

| St. John's            | (772-4073)                          | Sturgeon Falls       | (753-4888) |

## Introduction

The highway, road, street and bridge contracting industry, which is the subject of this publication, is one of the component industries covered by Statistics Canada's annual Census of the Construction Industries. Other publications resulting from this census are listed on page 43. For survey purposes, economic activity is subdivided into industries based on specialization of producer groups (a complete definition of principles and industries is available in Statistics Canada's Standard Industrial Classification, Catalogue 12-501). Accordingly, the Construction Industry segment dealt with in this document is defined as consisting of all establishments primarily engaged in the construction and repair of highways, roads, streets, bridges, parking lots and airport runways.

In addition to the primary specializations, this industry derives revenues from other types of contract construction, such as sewers, watermains and residential or non-residential building; as well as from other operations, such as sales of asphalt, aggregate or ready mix concrete, equipment rentals and snow clearing. Figure I illustrates the distribution of the contract portion of revenues.

The construction activity of the highway, road, street and bridge contracting industry is only a portion of the total value of construction performed in these categories. A substantial amount of highway and bridge work is done by the labour forces of the various municipal, provincial and federal government departments, particularly in the areas of repair, maintenance, materials supply, planning and design. The total volume of this portion, often referred to as own account construction, amounts to 25% to 30% of the total put in place nationally. In addition, some 10% to 15% of highway and bridge work is performed as a secondary construction activity by contractors specializing in other types of construction (such as heavy engineering or non-residential building).

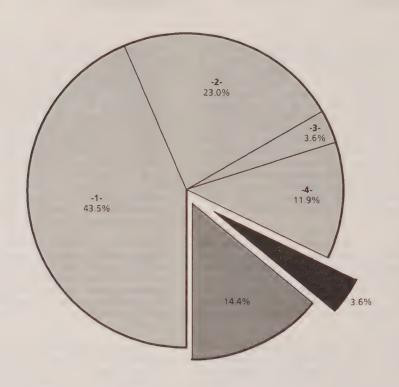

# Introduction

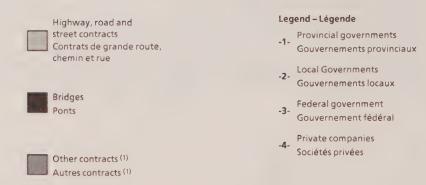

L'industrie de la construction de grandes routes, de chemins, de rues et de ponts, qui fait l'objet de cette publication, est une des industries visées par le recensement des industries de la construction que Statistique Canada effectue annuellement. On trouvera à la page 43 les titres d'autres publications qui découlent de ce recensement. Aux fins de l'enquête, l'activité économique est divisée en industries sur la base de la spécialisation des groupes producteurs (on trouvera une définition complète des principes et des industries dans la Classification type des industries de Statistique Canada, nº 12-501 au catalogue). En conséquence, la portion de l'industrie de la construction dont traite le présent document est définie comme formée de toutes les entreprises principalement engagées dans la construction et la réparation de grandes routes, de chemins, de rues, de ponts, terrains de stationnement et de pistes d'aéroport.

En plus de ses principaux domaines de spécialisation, cette industrie tire des revenus d'autres genres de construction à contrat, tels que les égouts, les conduites d'eau et la construction de bâtiments domiciliaires ou autres, ainsi que d'autres opérations, comme la vente d'asphalte, de granulat ou de béton préparé, la location de matériel et le déneigement. La figure I montre la distribution des revenus provenant de contrats.

L'activité de construction de l'industrie des entrepreneurs de grandes routes, chemins, rues et ponts ne représente qu'une partie de la valeur totale de la construction exécutée dans ces catégories. Le personnel des divers services municipaux, provinciaux et fédéraux réalise une part considérable des travaux qu'exigent les grandes routes et les ponts, principalement pour la réparation, l'entretien, la fourniture de matériel, la planification et la conception. Cette part, souvent appelée construction pour propre compte, compte au total pour 25% à 30% des travaux réalisés à l'échelle du pays. De plus, des entrepreneurs spécialisés dans d'autres types de construction (entrepreneurs en gros travaux de génie ou en construction non domiciliaire) réalisent, à titre d'activité de construction secondaire, environ 10% à 15% des travaux de construction de routes et de ponts.

The 8.5% of total construction activity, shown in the figure above, for highway, road and bridge construction, represents an absolute value of \$4,758,222,000 out of a total of \$55,947,767,000 for the total 1983 Canadian construction program (lines 46 to 49 plus 80, divided by the total line in Text Table IV). The total highway, road and bridge construction value includes the industry output of \$2,761,160,673 (Table 1, items 3 to 7 plus 9) as well as other industries' output and own account, as related earlier.

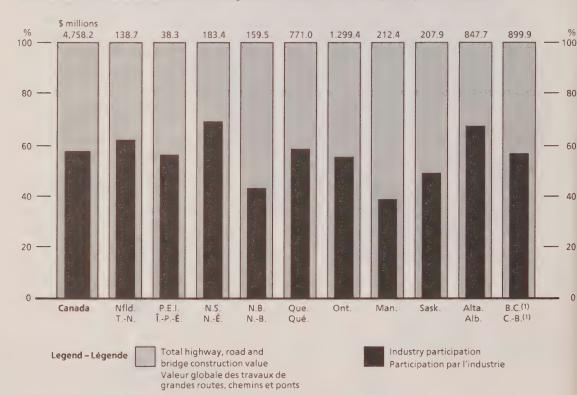

The proportion, by province, that the industry commands of the total market is reflected in Figure III

Le 8.5% des activités totales de construction, indiqué dans la figure ci-dessus pour la construction de grandes routes, chemins, rues et ponts, représente, en valeur absolue, \$4,758,222,000, sur un total de \$55,947,767,000 pour l'ensemble de la construction au Canada en 1983 (la somme des lignes 46 à 49 et 80, divisée par le total du tableau explicatif IV). La valeur globale des travaux de grandes routes, chemins et ponts comprend la production de l'industrie, qui s'élève à \$2,761,160,673 (tableau 1, postes 3 à 7, plus 9) ainsi que la production d'autres industries et la production à propre compte, tels qu'indiqués plus haut.

La figure III donne, par province, la proportion du marché total de la construction de grandes routes, chemins, rues et ponts réalisée par l'industrie elle-même.

Figure - III
Output of the Highway, Road and Bridge Construction Industry as a Percent of Provincial Highway, Road and Bridge Construction Put in Place, 1983

Pourcentages provinciaux de la construction de grandes routes, chemins et ponts comparativement aux données de l'industrie en construction de grandes routes, chemins et ponts pour l'année, 1983

(1) British Columbia includes Yukon and Northwest Territories.

(1) La Colombie-Britannique comprend également le Yukon et les Territoires du Nord-Ouest.

A detailed reconciliation between construction industry output and construction activity is available from the Census of Construction Section, Industry Division of Statistics Canada. On peut obtenir de la Section du recensement de la construction, Division de l'industrie de Statistique Canada une conciliation détaillée de la production de l'industrie de la construction et de l'activité de la construction.

Census results for 1983 indicate that road builders performed \$3,077,848,395 worth of construction work (statistical Table 1). This figure includes \$512.439.169 of work subcontracted out to general or trade contractors. Additionally, a volume of \$288,605,871 of other revenues was generated, making the total operating revenue for the industry \$3,366,454,266 On the basis of work put in place by own labour force (i.e. total construction revenue minus sub-contracts), the 1,335 establishments classified to this industry in 1983 were responsible for \$2,565,409,226 of construction. The reported values for total construction revenue are known to contain some duplication of volume. The latter, in effect, could be reported on two occasions, first by the general contractor who sub-contracted out a certain portion of a project, and secondly by the general contractor to whom this same portion was awarded. If the contract was awarded to a firm acting primarily as a subcontractor, then no danger of volume duplication exists, as trade contractors are not included in this census group.

With highways being largely a provincial jurisdiction, 61.5% or \$2,788,586,000 of the total highway construction value for 1983 (\$4,536,886,000 Text Table IV) was acquired by this level of government. Of this volume, \$1,338,494,375 worth of roadwork was produced by the road building industry (statistical Table 1, item 3). Thus, although (as we have seen in Figure I) provincial government contracts are the largest single source of contract revenue for the industry, provincial government own account construction, preconstruction planning and design and prime subcontract activity still creates a major portion of nationally constructed highways.

Statistical Table 1 provides industry characteristics by province and by size groups. The size group data can be used for performance appraisal by individual firms in the industry and they form a basis for economic analysis in such areas as concentration and business size. The largest 165 operations produce 67.2% of total output, the largest 341 produce 84.3% and the largest 409 produce 88.0%. With a 100 firm concentration ration running at around 57% the industry compares favourably in terms of competitiveness with other industries such as manufacturing. Considerations of profit to assets ratios at the total Canada level (as in statistical Table 3) would indicate a business size of between \$500,000 and \$749,999 dollars revenue size to have an optimum size in this industry.

An increase in productivity among the larger size groups, indicates some returns to scale. Compared to other construction industry sub-groups, this industry consists of a relatively small number of larger establishments, and expansion of output is to a great extent

Les résultats du recensement de 1983 indiquent que les constructeurs de routes ont réalisé pour \$3,077,848,395 de travaux de construction (tableau statistique 1). Ce chiffre comprend \$512,439,169 de travaux cédés en sous-traitance à des entrepreneurs généraux ou spécialisés. De plus, ces établissements avaient d'autres recettes qui se chiffraient à \$288,605,871 ce qui porte à \$3,366,454,266 les revenus de fonctionnement totaux de l'industrie. En ne prenant en compte que les travaux réalisés par leur propre personnel (c.-à-d. le total des revenus de construction moins la soustraitance), les 1,335 établissements classés dans cette industrie en 1983 ont réalisé pour \$2,565,409,226 de construction. Nous savons que le "total des revenus de construction" déclaré contient une certaine quantité de déclarations en double. Certains travaux pourraient en effet être déclarés deux fois, d'abord par l'entrepreneur général qui a cédé en sous-traitance une certaine partie du projet, puis par l'entrepreneur général qui a réalisé le travail en sous-traitance. Si le contrat a été adjugé à une entreprise agissant principalement comme sous-traitant, il n'existe aucun danger de double déclaration, étant donné que les entrepreneurs spécialisés ne sont pas compris dans cette catégorie d'enquêtés.

Comme les grandes routes sont principalement de juridiction provinciale, 61.5% ou \$2,788,586,000 de la valeur totale de la construction de grandes routes réalisée en 1983 (\$4,536,886,000 au tableau IV) est attribuable à ce palier de gouvernement. De ce montant, l'industrie de la construction de routes en a produit pour \$1,338,494,375 de travaux de routes (tableau statistique 1, poste 3). Ainsi, bien que (comme nous l'avons vu dans la figure I) les contrats des gouvernements provinciaux soient, pour l'industrie, la plus importante source de revenus tirés de contrats, les activités provinciales de construction pour propre compte, de planification et conception préalables, ainsi que de sous-traitance directe produisent toujours une majeur partie des grandes routes construites au Canada.

Le tableau statistique 1 présente les caractéristiques de l'industrie par province et par tranche de taille. Les données par tranche de taille, en plus de permettre à chaque entreprise de construction d'évaluer son propre rendement, forment la base d'une analyse économique de domaines comme la concentration et la taille des entreprises. Les 165 plus grandes opérations produisent 67.2% de la production totale, les 341 plus grandes en produisent 84.3% et les 409 plus grandes en produisent 88.0%. Avec un taux de concentration pour les 100 principales entreprises d'environ 57%, l'industrie se compare favorablement, sur le plan de la compétitivité, avec d'autres industries comme la fabrication. Si on considère la proportion des bénéfices par rapport aux immobilisations pour l'ensemble du Canada (comme dans le tableau statistique 3), il semble que la taille optimale des entreprises dans cette branche d'activité est celle dont le revenu se situe entre \$500,000 et \$749,999.

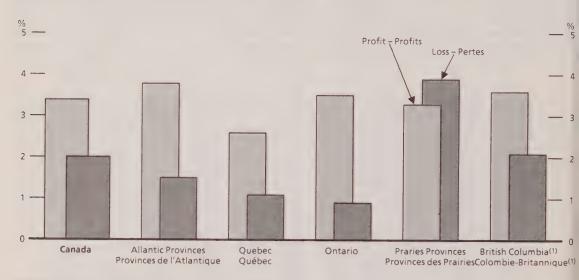

L'augmentation de la productivité chez les groupes de plus grande taille indique qu'il existe un certain rendement d'échelle. Comparativement à d'autres sous-groupes de l'industrie de la construction, cette industrie regroupe un nombre relativement petit de grandes entreprises, et l'augmentaachieved by increasing the scale of operations. Machinery and equipment purchases may not give a clear picture of substitution of capital investment for labour due to a high incidence of equipment rental and leasing. It should be noted that size groups are based on current dollars; this causes an artifical movement toward the larger size groups over time.

Figure IV compares profit levels among the provinces.

tion de la production s'accomplit dans une grande mesure par l'expansion des opérations. Les achats de machines et d'équipement ne donnent pas nécessairement une bonne idée du taux de remplacement de la main d'oeuvre par les immobilisations parce qu'une grande partie de l'équipement est loué. Il faut noter que les tranches de taille sont établies en se fondant sur des chiffres en dollars courants, ce qui produit avec le temps un mouvement artificiel vers les plus grands groupes.

La figure IV compare les niveaux des bénéfices entre les provinces.

Figure - IV
Levels of Profit and Loss Relative to Total Operating Revenue, Canada and Provinces, 1983
Niveaux des bénéfices et pertes relatifs au revenu total d'exploitation, Canada et provinces, 1983

- (1) British Columbia includes Yukon and Northwest Territories.
- (1) La Colombie-Britannique comprend le Yukon et les Territoires du Nord-Ouest.

A sample of balance sheet information for establishments with related income statement data appears in Table 2. While Table 2 is primarily a crossclassification of statistical data by region or province and by size group, establishments having operations in more than one province (i.e., "multiple establishments") are consolidated and published separately on the last page of the table. This special treatment of "multiple establishments" was utilized because satisfactory techniques for allocating their consolidated balance sheet data by region and province were not available.

Table 3 presents a series of selected financial ratios based on income statement and balance sheet items Le tableau 2 présente un échantillon de données relatives au bilan des établissements et de données connexes tirées d'états des revenus et dépenses. Bien que ce tableau renferme principalement des recoupements de données statistiques par région ou province et par tranche de taille, les données des établissements qui ont des activités dans plus d'une province (les "établissements multiples") sont regroupées et publiées séparément à la dernière page du tableau 2. Ces établissements étaient assujettis à ce traitement spécial faute de méthodes satisfaisantes pour répartir par province et par région les données globales de leurs bilans.

Le tableau 3 présente une série de proportions financières basées sur les postes des états des profits et dépenses et des reported in Table 2. While only the more commonly used financial ratios are published in Table 3, basic data for deriving additional ratios are available from Tables 1 and 2.

#### **Definitions**

Size groups used in the statistical tables are based on the current period's total gross operating revenue of individual provincial establishments.

New construction or capital expenditures (Text Tables I-IV) represents the total acquisition cost of new durable plant. Included are additions, replacements, alterations, conversions and renovations. All other construction is defined as repair. This consists of non-capitalized outlays made to maintain the operating efficiency of structures and is generally necessitated by damage or deterioration. Minor renovations and alterations are included in repair, but routine care of assets and maintenance are excluded.

Types of construction definitions include the following:

Highways, roads and streets: grading, scraping, oiling, filling, and construction of sidewalks and paths.

Bridges: trestles, culverts, overpasses, viaducts and approach work.

Sewers and watermains: sewage systems, tile drains, drainage ditches, storm sewers, water mains, hydrants and services, and other water and sewer facilities.

Parking lots: open surface area construction only, parking garages are included in non-residential building construction.

Non-residential buildings: light industrial, commercial, institutional and other non-residential buildings.

Residential buildings: single, row, apartment and other residential buildings.

Other construction: airport runways, landing fields and tarmac, as well as any other type of construction, not included in the above structure groups.

### Methodology

In censuses prior to 1975, data were collected by direct survey questionnaire and made available at the reported level only. No estimate was made for non-response or for firms not included in the census. It was known, however, that the majority of missing firms were small and that the coverage in terms of dollar volume ranged from 85% to 90% for most of the

bilans que renferme le tableau 2. Même s'il ne présente que les proportions financières les plus fréquemment utilisées, les données de base qui se trouvent aux tableaux 1 et 2 permettent de calculer d'autres proportions.

### **Définitions**

Les groupes de taille qui figurent dans les tableaux statistiques sont établis selon les recettes d'exploitation brutes totales des établissements provinciaux individuels pour la période courante.

Les nouvelles dépenses de construction ou en immobilisations (voir les tableaux I à IV du texte) représentent le coût d'acquisition total d'une nouvelle installation durable. Sont compris les adjonctions, les remplacements, les modifications, les transformations et les rénovations. Toute autre construction est définie comme étant une réparation. Il s'agit de dépenses non capitalisées faites pour assurer le fonctionnement efficace des ouvrages et généralement occasionnées par des dommages ou par la détérioration. Les rénovations et les modifications mineures sont comprises dans les réparations, mais non l'entretien régulier des biens.

Voici les types de travaux que l'on retrouve dans les genres de constructions:

Grandes routes, chemins et rues: terrassement, nivelement, épandage d'huile, remblayage, trottoirs et allées.

Ponts: chevalets, ponceaux, voies supérieures, viaducs et rampes d'accès.

Égouts et tuyaux d'aqueduc: systèmes d'égouts, drains, fossés de drainage, égouts pluviaux, tuyaux d'aqueduc, bouches d'incendie, conduites de branchement; autres genres de canalisations et de systèmes d'égouts.

Terrains de stationnement: construction de terrains de stationnement ouvert seulement; les édifices de stationnement figurent à la rubrique "bâtiments non-domiciliaires".

Bâtiments non-domiciliaires: bâtiments industriels légers, commerciaux et institutionnels; autres bâtiments non-domiciliaires.

Bâtiments domiciliaires: bâtiments simples, en rangée et appartements; autres bâtiments domiciliaires.

Autres travaux de construction: pistes d'envol, terrains d'atterrissage, aires d'embarquement, terrains de stationnement; autres travaux de construction qui ne sont pas compris ci-dessus.

### Méthodologie

Lors des recensements antérieurs à 1975, les données étaient recueillies directement au moyen de questionnaires et diffusées telles quelles. En d'autres termes, aucune estimation n'était faite pour tenir compte des non-répondants ou des entreprises non recensées. On savait toutefois que la plupart des entreprises omises étaient petites et que le volume, en dollars, que représentaient les entreprises recen-

various sub-industry groups. For census cycles beginning 1975, a blend of direct survey and random sampling methods is used to provide universe estimates.

Construction firms were separated by total operating revenue into two groups: those with more than \$750,000 annual revenue and those with annual revenue in the range of \$10,000 to \$750,000. The larger firms received the census long form, of which a copy is provided at the end of this publication. The smaller firms were stratified by sub-industry group, size range and province, from which a sample was selected for the collection of financial and non-financial data. The sampling rates varied between 10% and 50% for firms with less than \$50,000 annual revenue. Financial data were collected for all firms with between \$375,000 and \$750,000 total operating revenue. The financial information was obtained from administrative records provided by Revenue Canada. Non-financial data (i.e. operating characteristics and labour data) were collected for a sub sample of this group, numbering approximately 10,000 contractors, by means of an abbreviated survey form. The sample results were inflated to the universe level using the weight associated with each record in the sample. The weight for a record was calculated as the inverse of its probability of inclusion in the sample (sampling rate). The large and small firms results were then merged and tabulated to produce the tables contained in this publication.

During 1980 to 1983 a comprehensive review was undertaken of sampling procedures, data qualities and methodologies employed in the generation of the Census of the Construction Industry small firm universe. As a result of this review, several improvements were implemented resulting in better estimates of construction output. Because of this, users of the series are cautioned that universe measures for the years before 1981 are comparatively understated.

## **Further Information**

The data presented in this publication represent only a selected portion of total 1983 statistical information available on the highway, road, street and bridge contracting industry. Additional breakdowns, statistics and definitions are available to users subject to the conditions of the Statistics Act. Please contact the Census of Construction Section, Industry Division of Statistics Canada.

sées se situait entre 85% et 90% pour la plupart des divers sous-groupes de l'industrie. À partir de 1975, on s'est servi pour les recensements à la fois de l'enquête directe et de l'échantillonnage aléatoire pour obtenir des estimations visant l'ensemble de l'univers.

Les entreprises de construction ont été partagées en deux groupes selon le montant annuel de leurs revenus d'exploitation: plus de \$750,000 et \$10,000 à \$750,000. Les grandes entreprises ont reçu le questionnaire de recensement détaillé, qui est reproduit à la fin de cette publication. Les petites entreprises ont, d'autre part, été stratifiées par sous-groupe, tranche de taille et province avant qu'on ne tire, de chaque strate, un échantillon pour la collecte de données financières et autres. Parmi les entreprises dont le revenu annuel était inférieur à \$50,000, la fraction de sondage allait de 10% à 50%. Des données financières ont été obtenues pour toutes les entreprises dont le revenu d'exploitation se situait entre \$375,000 et \$750,000. Elles ont été tirées des dossiers administratifs de Revenu Canada. Pour recueillir les données non financières (c.-à-d. les caractéristiques d'exploitation et les données sur la main-d'oeuvre) on a envoyé à un souséchantillon de ce groupe, comprenant environ 10,000 entrepreneurs, une formule d'enquête abrégée. Les chiffres obtenus de l'échantillon ont été gonflés au niveau de l'univers à l'aide du coefficient de pondération lié à chaque enregistrement de l'échantillon. D'après les calculs, ce coefficient de pondération était égal à l'inverse de la probabilité d'inclusion de l'entreprise dans l'échantillon (fraction de sondage). Les résultats des grandes et des petites entreprises ont ensuite été regroupés et mis en forme pour produire les tableaux de la présente publication.

De 1980 à 1983 on a entrepris un examen général des techniques d'échantillonnage, de la qualité des données et des méthodes utilisées pour établir l'univers des petites entreprises du recensement de l'industrie de la construction. Par suite de cet examen, plusieurs améliorations ont été apportées qui ont permis de mieux évaluer les sorties de la construction. C'est pourquoi les utilisateurs de la série sont priés de noter que les mesures de l'univers qui se rapportent aux années précédant 1981 sont relativement sous-évaluées.

# Renseignements supplémentaires

Les données présentées dans cette publication ne constituent qu'une partie de l'information recueillie, pour 1983, sur les entrepreneurs de grandes routes, chemins, rues et ponts. On peut obtenir d'autres ventilations, données statistiques et définitions, sous réserve des stipulations de la Loi sur la statistique. Veuillez communiquer, à cette fin, avec la Section du recensement de la construction, Division de l'industrie de Statistique Canada.

See footnote(s) at end of tables. - Voir note(s) à la fin des tableaux.

#### **Footnotes**

- The cross-classification table by size group is based on total gross operating revenue. Information in certain columns does not always add to Canada, regional and provincial totals to meet secrecy requirements of the Statistics Act.
- (2) "Total value of construction output" is equivalent to "Construction revenue".
- (3) "Other" contracts include mining, logging roads, sub-division roads, etc., for private companies.
- (4) "Other construction" includes airport runways, pipelines, dams, hydro-electric projects, etc.
- (5) "Other revenue" includes sale of asphalt and ready mix concrete, gravel pit operations, etc.
- (6) All values in Tables 2 and 3 are at a sample or sub-census level, as defined by establishments reporting balance sheet information.
- (7) Establishments with operations in more than one province are consolidated and published separately on the last page of Table 2 (see table titled "multiple establishments"). This special treatment of "multiple establishments" in Table 2 was utilized because satisfactory techniques for allocating their consolidated balance sheet data by province and region were not available. Accordingly, the figures in the columns of Table 2, Canada, may not agree in certain cases with those published in the corresponding columns of Table 1, Canada.
- (8) "Working capital" is defined as the excess of current assets over current liabilities.
- (9) This size group was established to meet secrecy requirements of the Statistics Act.
- (10) British Columbia includes Yukon and Northwest Territories.
- (11) Information has been omitted to meet secrecy requirements of the Statistics Act.
- (12) Total capital employed is the sum of long-term liabilities and equity.

#### Notes

- (1) Le tableau des données recoupées selon la tranche de taille est établi d'après le total du revenu brut d'exploitation. Les données de certaines colonnes n'égalent pas toujours le total pour le Canada, les régions et les provinces afin de satisfaire aux prescriptions de la Loi sur la statistique relatives au secret.
- "Valeur globale du produit de la construction" est équivalent à "revenus de construction".
- (3) "Autres" contrats comprennent les chemins d'accès pour les mines, les chantiers d'exploitation forestière, les rues dans les projets de maisons, etc., pour des sociétés privées.
- (4) "Autres travaux de construction" comprennnent les pistes de roulement d'aéroports, les pipes lines, les barrages, les projets hydro-électrique, etc.
- (5) "Autres revenus" comprennent la vente d'asphalte et de béton préparé, les exploitations gravières, etc.
- (6) Toutes les informations dans les tableaux 2 et 3 sont au niveau échantillon ou sous-recensement, définies par les établissements fournissant des informations sur leur bilan.
- (7) Les établissements qui ont exécuté des travaux dans plus d'une province sont regroupés et publiés séparément sur la dernière page du tableau 2 (voir la page intitulée "établissements multiples"). Ce groupement distinct accordé à ces établissements dans le tableau 2 a été utilisé vu l'absence de méthodes satisfaisantes pour faire une répartition par province et par région des données de bilan déclarées sur une base totale seulement. Il s'ensuit que les chiffres qui apparaissent dans les colonnes du tableau 2, Canada, ne comparent pas dans certains cas avec ceux publiés dans les colonnes correspondantes du tableau 1, Canada.
- (8) "Fonds de roulement" est défini par l'excès des actifs à court terme sur les passifs à court terme.
- (9) On a établi cette tranche de taille pour satisfaire aux prescriptions de la Loi sur la statistique relatives au secret.
- (10) La Colombie-Britannique comprend également le Yukon et les Territoires du Nord-Ouest.
- (11) On a omis les données pertinentes pour satisfaire aux prescriptions de la Loi sur la statistique relatives au secret.
- (12) Capital total investi est la somme obtenue lorsqu'on additionne le passif à long terme avec le capital.

| GROSS OPERATING REVENUE   |                 |
| 7. Gross revenue from construction operations   |                 |
| <ol> <li>Other gross operating revenue (e.g. sale of asphalt, ready-mix concrete, sand, gravel, rental of equipment (without the operator),<br/>snow removal, engineering fees, sand blasting, swimming pool service and parts, etc.) Please specify.</li> </ol>  |                 |
| (a)   |                 |
| (b)   |                 |
| (c)   |                 |
| 9. TOTAL GROSS OPERATING REVENUE  |                 |
| EXPENSES  |                 |
| Note: Complete questions 10 and 11 below only if work-in-progress is shown as separate items in the Profit and Loss Statement   |                 |
| 10. Work-in-progress at beginning of reporting period   |                 |
| 11. Work-in-progress at end of reporting period (brackets denote subtraction during totalling of this section)  |                 |
| 12. Sub-contracts**  (If billings from sub-contractors are not separable from another reported item, please provide best dollar estimate)   |                 |
|   |                 |
| 13 Materials. Exclude on site expenses and other direct costs which are not construction materials (e.g. purchase of equipment parts, gas, oil, repairs to equipment, rentals, etc.). These costs should be reported in the appropriate items below. Estimate cost of materials if actual is not available. |                 |
| 14. (a) Gross wages paid to all hourly-rated employees  |                 |
| \$ and \$   |                 |
|   |                 |
| (b) Estimated average hourly rate for all employees whose wages are shown in item 14(a) above   |                 |
| 15. (a) Gross salaries paid (e.g. executives, management and administrative employees, supervisors, etc. including bonuses and commissions)   |                 |
| Number  |                 |
| (b) Estimated average annual number of salaried employees whose salaries are shown in item 15(a) above  | 1               |
| above   |                 |
| 16. Employer contributions to employee welfare and benefit plans:   |                 |
| (Sum of all contributions not included in questions 14(a) and 15(a) above, such as Workmen's Compensation; Unemployment Insurance; Canada or provincial pension plan; private pension plan; life, health and accident insurance plan; union welfare;  | i               |
| vacation and statutory holiday pay, etc; include allowances for travel, board and lodging)  |                 |
| 17. Gas, oil and utilities (light, heat, etc.) expenses.  |                 |
| 18. Repair expenditures on all machinery and equipment  |                 |
| 19. Repair expenditures on all buildings and structures   |                 |
| 20. Total depreciation expense on buildings, machinery, equipment, etc.   |                 |
| 21 All other expenses not specified above (e.g. interest charges, licences, insurance, hired trucking, equipment rental**, leasing,   |                 |
| etc)  |                 |
| TOTAL EXPENSES (sum of items 10 minus 11 plus 12, 13, 14(a), 15(a), 16, 17, 18, 19, 20, 21)   |                 |
| 23. NET OPERATING PROFIT BEFORE TAXES (IF LOSS PLEASE BRACKET)  |                 |
| 24. NON-OPERATING MISCELLANEOUS REVENUE (NET) – (IF LOSS PLEASE BRACKET):   |                 |
| (a) Income from construction Joint Venture operations   |                 |
| (b) Other (e.g. bad debts recovered, gain or loss on sale of fixed assets, investment income, etc.)   |                 |
| 25. EARNINGS AND WITHDRAWALS OF WORKING OWNERS OR PARTNERS (UNINCORPORATED COMPANIES ONLY)  |                 |
| 26. Were any of the materials reported above in item 13 (e.g. liquid asphalt, granular materials, culverts, guardrails, structural steel, ready-mix concrete, piping etc.) provided to your sub-contractors for installation?   |                 |
| 27. Were any construction materials installed by your own labour force (e.g. liquid asphalt, granular materials, culverts, guardrails, structural steel, ready-mix concrete, piping, etc.) provided by project owners (e.g. companies, governments, individuals)?   | Yes 🗆 No        |

<sup>\*\*</sup>If your firm rented equipment with the operator, the cost of such expenses should be entered under item 12, "Sub-contracts". However, if the rented equipment was supplied without the operator, include under item 21, "All other expenses not specified above".

|   | -        |  |
|---|----------|--|
| SECTION C. ADDITIONAL INFORMATION RELATING TO SECTION B, PAGE 2.  |          |  |
| 8. Of the revenue from construction operations reported in item 7, page 2, estimate what percentage was derived from:   |          |  |
| a) New construction (including reconstruction)  |          |  |
| b) Repair construction  |          |  |
|   | 1 = 100% | ŧ6                                     |
| 9. Please indicate each type of construction performed during the reporting period. (if exact percentages are not available, provide your best estimates).  | 1        | Type(s)<br>construct                   |
| A. Highways, roads, streets including elevated highways, overpasses, bridges including approach work, parking lots and airport runways:  (a) Highways, roads including elevated highways, overpasses, streets, sidewalks and curbs:   |          | %                                      |
| (i) Provincial Government contracts   | 01       |  |
| (ii) Local Government contracts   | . 1021   |  |
| (iii) Federal Government contracts  | ,03      |  |
|   |          |  |
| (iv) Private company roads (e.g. oil field access roads, logging roads, mining roads, subdivision roads, etc.)  |          |  |
| Please specify:   | 04       |  |
| (b) Bridges including approach work (separate contracts only)   | . 05     | r                                      |
| (c) Parking lots  | . 06     |  |
| (d) Airport runways   | 07       |  |
| B. Other heavy construction:  (e) Electric power facilities (includes hydro-electric stations, nuclear and thermal power plants, communication towers, power dams, cable installation such as transmission and distribution lines (hydro, telephone, telegraph, underground, marine, cablevision, microwave, etc.) and other types of energy and power related structures  (f) Water and sewer facilities (includes watermains, water treatment and filtration plants, sanitary and storm sewers, storm ditches, sewage plants, pumping stations, water storage tanks, reservoirs, and other types of waterworks and sewage systems)  (g) Gas and oil facilities (includes gas and oil pipelines, refineries, processing plants, pumping stations, gas mains and other types of gas and oil facilities) | 12       |  |
| (h) Heavy industrial structures: smelters, pulp and paper mills, heavy water plants, steel mills, pelletizing plants, cement plants and other heavy industrial plants.  | 15       |  |
| (i) Marine facilities (includes dredging, water control dams, canals, waterways, docks, wharves, piers, breakwaters, retaining walls, embankments and other types of marine facilities)   | 17       |  |
| (j) Other engineering construction: swimming pool installation, irrigation projects, land clearing and draining, mine shafts and other underground mining facilities, tunnels and subways, railway tracks and roadbeds, tennis courts and other outdoor recreation facilities, parks, etc.  |          |  |
| Please specify:   |          |  |
|   | 18       |  |
| C. Building construction:  (k) Non residential buildings (warehouses, office buildings, schools, hospitals, etc.) Please specify:   |          |  |
| (l) Residential buildings (single, duplex, triplex, row houses, etc.)   |          |  |
| D. Other construction: (m) Other construction not shown above.  |          |  |
| Please specify  |          | Sum of<br>all above<br>items<br>= 100% |
| . For total wages paid and reported in item 14(a), page 2, please indicate the estimated total hours worked by your hourly paid labour force  |          | hours                                  |

(Reported figure should be the total hours actually worked, i.e. count an hour of overtime paid at time and one-half or double time as one hour worked only).

## SECTION D. BALANCE SHEET AND CAPITAL EXPENDITURES

| BALANCE SHEET   | \$ (omit cents)       |
|---|-----------------------|
| ASSETS  31. Cash and short-term investments.  |                       |
|   |                       |
| 32. Accounts receivable including holdbacks (less allowance for bad debts)  |                       |
| 33. Inventories (e.g. materials, work-in-progress, equipment parts, etc.)   |                       |
| 34. Other current assets (e.g. deposits, prepaid expenses, etc.) \$ (omit cents)  |                       |
| 35. Fixed assets:  (a) Property, plant, equipment, etc., at cost  |                       |
| (b) Accumulated depreciation  |                       |
| (c) Fixed assets less accumulated depreciation .  |                       |
| 36. Other long-term assets (e.g. investments, mortgages, incorporation fees, goodwill and other intangibles, etc.)  |                       |
| JU. Other long term asset (e.g. m   |                       |
| 37. TOTAL ASSETS  |                       |
| LIABILITIES AND EQUITY:   |                       |
| 38. Current liabilities (e.g. accounts payable, short-term bank loans and notes payable, holdbacks, advances, etc.)   |                       |
| 39. Long-term liabilities (e.g. long-term debts, loans, mortgages, etc.)  |                       |
| 40. Equity (share capital, contributed surplus, retained earnings, etc.).   |                       |
| 41. TOTAL LIABILITIES AND EQUITY  |                       |
| CAPITAL EXPENDITURES  | \$ (omit cents)       |
| 42. Capital expenditures on NEW buildings and structures (excluding land) used by your firm or rented to others (including capitalized                                    |                       |
| leasehold improvements)  43. Capital expenditures on NEW machinery and equipment used by your firm or rented to others (e.g. cars, trucks, heavy equipment, office        |                       |
| machines, furniture, etc.)  44. Capital expenditures on USED machinery and equipment (include any machinery and equipment leased prior to 1983 on which                   |                       |
| the option to purchase has been exercised)  |                       |
| RESPONDENT'S EXPLANATORY NOTES:   |                       |

#### Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

#### How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Construction Census Section, Industry Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9814) or to the Statistics Canada reference centre in:

## ntroduction

The highway, road, street and bridge contracting ndustry, which is the subject of this publication, is ne of the component industries covered by Statistics lanada's annual Census of the Construction Industries. Other publications resulting from this census re listed on page 43. For survey purposes, economic ctivity is subdivided into industries based on specialization of producer groups (a complete definition of rinciples and industries is available in Statistics lanada's Standard Industrial Classification, Catalogue 2-501). Accordingly, the Construction Industry segnent dealt with in this document is defined as consisting of all establishments primarily engaged in the onstruction and repair of highways, roads, streets, ridges, parking lots and airport runways.

In addition to the primary specializations, this idustry derives revenues from other types of contract onstruction, such as sewers, watermains and residenal or non-residential building; as well as from other perations, such as sales of asphalt, aggregate or ready its concrete, equipment rentals and snow clearing. igure I illustrates the distribution of the contract ortion of revenues.

The construction activity of the highway, road, reet and bridge contracting industry is only a poron of the total value of construction performed in inese categories. A substantial amount of highway in bridge work is done by the labour forces of the arious municipal, provincial and federal government epartments, particularly in the areas of repair, maintanance, materials supply, planning and design. The otal volume of this portion, often referred to as own acount construction, amounts to around 35% of the otal put in place nationally. In addition, some 10% of ighway and bridge work is performed as a secondary instruction activity by contractors specializing in their types of construction (such as heavy engineering r non-residential building).

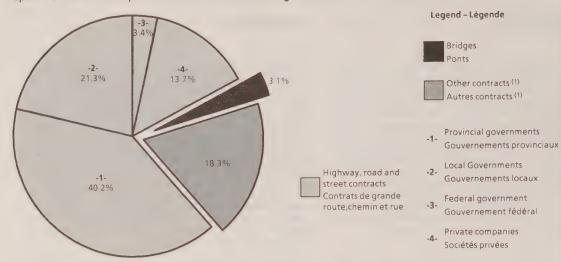

## Introduction

L'industrie de la construction de grandes routes, de chemins, de rues et de ponts, qui fait l'objet de cette publication, est une des industries visées par le recensement des industries de la construction que Statistique Canada effectue annuellement. On trouvera à la page 43 les titres d'autres publications qui découlent de ce recensement. Aux fins de l'enquête, l'activité économique est divisée en industries sur la base de la spécialisation des groupes producteurs (on trouvera une définition complète des principes et des industries dans la Classification type des industries de Statistique Canada, no 12-501 au catalogue). En conséquence, la portion de l'industrie de la construction dont traite le présent document est définie comme formée de toutes les entreprises principalement engagées dans la construction et la réparation de grandes routes, de chemins, de rues, de ponts, terrains de stationnement et de pistes d'aéroport.

En plus de ses principaux domaines de spécialisation, cette industrie tire des revenus d'autres genres de construction à contrat, tels que les égouts, les conduites d'eau et la construction de bâtiments domiciliaires ou autres, ainsi que d'autres opérations, comme la vente d'asphalte, de granulat ou de béton préparé, la location de matériel et le déneigement. La figure I montre la distribution des revenus provenant de contrats.

L'activité de construction de l'industrie des entrepreneurs de grandes routes, chemins, rues et ponts ne représente qu'une partie de la valeur totale de la construction exécutée dans ces catégories. Le personnel des divers services municipaux, provinciaux et fédéraux réalise une part considérable des travaux qu'exigent les grandes routes et les ponts, principalement pour la réparation, l'entretien, la fourniture de matériel, la planification et la conception. Cette part, souvent appelée construction pour propre compte, compte au total pour environ 35% des travaux réalisés à l'échelle du pays. De plus, des entrepreneurs spécialisés dans d'autres types de construction (entrepreneurs en gros travaux de génie ou en construction non domiciliaire) réalisent, à titre d'activité de construction secondaire, environ 10% des travaux de construction de routes et de ponts.

Figure - I
Distribution of Contract Income by Type of Construction, Canada, 1984
Répartition des revenus provenant de contrats selon le genre de construction, Canada, 1984

(1) Includes sewers and watermains, parking lots and driveways, buildings, airport runways, etc.

(1) Comprend égouts et tuyaux d'aqueduc, parcs de stationnement et entrées de cour, bâtiments, pistes d'aéroport, etc.

Data on total highway, road, street and bridge construction are provided in the Statistics Canada publication *Construction in Canada* (Catalogue 64-201). The Text Tables I to IV, below, are reproduced from that publication. Figure II presents a breakdown of the total construction program for 1984, by major structure groups, based on the data in Text Table IV.

The 8.5% of total construction activity, shown in the figure below, for highway, road and bridge construction, represents an absolute value of \$4,827,284,000 out of a total of \$56,574,478,000 for the total 1984 Canadian construction program (lines 46 to 49 plus 80, divided by the total line in Text Table IV). The total highway, road and bridge construction value includes the industry output of \$2,977,475,985 (Table 1, items 3 to 7 plus 9) as well as other industries' output and own account, as related earlier.

The proportion, by province, that the industry commands of the total market is reflected in Figure III

A detailed reconciliation between construction industry output and construction activity is available from the Census of Construction Section, Industry Division of Statistics Canada.

On trouvera des données sur l'activité totale de construction de grandes routes, chemins, rues et ponts dans la publication de Statistique Canada *Construction au Canada* (nº 64-201 au catalogue). Les tableaux explicatifs I à IV qui suivent sont reproduits de cette publication. La figure II présente une ventilation du total de la construction en 1984, selon le genre de construction, en se fondant sur les données du tableau explicatif IV.

Le 8.5% des activités totales de construction, indiqué dans la figure ci-dessous pour la construction de grandes routes, chemins, rues et ponts, représente, en valeur absolue, \$4,827,284,000, sur un total de \$56,574,478,000 pour l'ensemble de la construction au Canada en 1984 (la somme des lignes 46 à 49 et 80, divisée par le total du tableau explicatif IV). La valeur globale des travaux de grandes routes, chemins et ponts comprend la production de l'industrie, qui s'élève à \$2,977,475,985 (tableau 1, postes 3 à 7, plus 9) ainsi que la production d'autres industries et la production à propre compte, tels qu'indiqués plus haut.

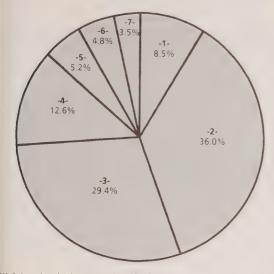

La figure III donne, par province, la proportion du marché total de la construction de grandes routes, chemins, rues et ponts réalisée par l'industrie elle-même.

On peut obtenir de la Section du recensement de la construction, Division de l'industrie de Statistique Canada une conciliation détaillée de la production de l'industrie de la construction et de l'activité de la construction.

1) British Columbia includes Yukon and Northwest Territories.

1) La Colombie-Britannique comprend également le Yukon et les Territoires du Nord-Ouest.

Census results for 1984 indicate that road builders performed \$3,442,102,734 worth of construction work (statistical Table 1). This figure includes \$675,023,443 of work subcontracted out to general or trade contractors. Additionally, a volume of \$304,661,891 of other revenues was generated, making the total operating revenue for the industry \$3,746,764,625 On the basis of work put in place by own labour force (i.e. total construction revenue minus sub-contracts), the 1,587 establishments classified to this industry in 1984 were responsible for \$2,767,079,291 of construction. The reported values for total construction revenue are known to contain some duplication of volume. The latter, in effect, could be reported on two occasions. first by the general contractor who sub-contracted out a certain portion of a project, and secondly by the general contractor to whom this same portion was awarded. If the contract was awarded to a firm acting primarily as a subcontractor, then no danger of volume duplication exists, as trade contractors are not included in this census group.

With highways being largely a provincial jurisdiction, 60.5% or \$2,437,369,000 of the total highway construction value for 1984 (\$4,028,994,000 Text Table IV) was acquired by this level of government. Of this volume, \$1,384,158,140 worth of roadwork was produced by the road building industry (statistical Table 1, item 3). Thus, although (as we have seen in Figure I) provincial government contracts are the largest single source of contract revenue for the industry, provincial government own account construction, preconstruction planning and design and prime subcontract activity still creates a major portion of nationally constructed highways.

Statistical Table 1 provides industry characteristics by province and by size groups. The size group data can be used for performance appraisal by individual firms in the industry and they form a basis for economic analysis in such areas as concentration and business size. The largest 178 operations produce 65.4% of total output, the largest 384 produce 83.6% and the largest 451 produce 86.9%. With a 100 firm concentration ration running at around 55% the industry compares favourably in terms of competitiveness with other industries such as manufacturing. Considerations of profit to assets ratios at the total Canada level (as in statistical Table 3) would indicate a business size of between \$750,000 and \$999,999 dollars revenue size to have an optimum size in this industry.

An increase in productivity among the larger size groups, indicates some returns to scale. Compared to other construction industry sub-groups, this industry consists of a relatively small number of larger establishments, and expansion of output is to a great extent

Les résultats du recensement de 1984 indiquent que les constructeurs de routes ont réalisé pour \$3,442,102,734 de travaux de construction (tableau statistique 1). Ce chiffre comprend \$675,023,443 de travaux cédés en sous-traitance à des entrepreneurs généraux ou spécialisés. De plus, ces établissements avaient d'autres recettes qui se chiffraient à \$304,661,891 ce qui porte à \$3,746,764,625 les revenus de fonctionnement totaux de l'industrie. En ne prenant en compte que les travaux réalisés par leur propre personnel (c.-à-d. le total des revenus de construction moins la soustraitance), les 1,587 établissements classés dans cette industrie en 1984 ont réalisé pour \$2,767,079,291 de construction. Nous savons que le "total des revenus de construction" déclaré contient une certaine quantité de déclarations en double. Certains travaux pourraient en effet être déclarés deux fois, d'abord par l'entrepreneur général qui a cédé en sous-traitance une certaine partie du projet, puis par l'entrepreneur général qui a réalisé le travail en sous-traitance. Si le contrat a été adjugé à une entreprise agissant principalement comme sous-traitant, il n'existe aucun danger de double déclaration, étant donné que les entrepreneurs spécialisés ne sont pas compris dans cette catégorie d'enquêtés.

Comme les grandes routes sont principalement de juridiction provinciale, 60.5% ou \$2,437,369,000 de la valeur totale de la construction de grandes routes réalisée en 1984 (\$4,028,994,000 au tableau IV) est attribuable à ce palier de gouvernement. De ce montant, l'industrie de la construction de routes en a produit pour \$1,384,158,140 de travaux de routes (tableau statistique 1, poste 3). Ainsi, bien que (comme nous l'avons vu dans la figure I) les contrats des gouvernements provinciaux soient, pour l'industrie, la plus importante source de revenus tirés de contrats, les activités provinciales de construction pour propre compte, de planification et conception préalables, ainsi que de sous-traitance directe produisent toujours une majeur partie des grandes routes construites au Canada.

Le tableau statistique 1 présente les caractéristiques de l'industrie par province et par tranche de taille. Les données par tranche de taille, en plus de permettre à chaque entreprise de construction d'évaluer son propre rendement, forment la base d'une analyse économique de domaines comme la concentration et la taille des entreprises. Les 178 plus grandes opérations produisent 65.4% de la production totale, les 384 plus grandes en produisent 83.6% et les 451 plus grandes en produisent 86.9%. Avec un taux de concentration pour les 100 principales entreprises d'environ 55%, l'industrie se compare favorablement, sur le plan de la compétitivité, avec d'autres industries comme la fabrication. Si on considère la proportion des bénéfices par rapport aux immobilisations pour l'ensemble du Canada (comme dans le tableau statistique 3), il semble que la taille optimale des entreprises dans cette branche d'activité est celle dont le revenu se situe entre \$750,000 et \$999,999.

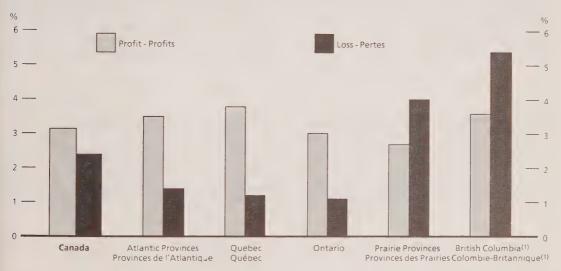

L'augmentation de la productivité chez les groupes de plus grande taille indique qu'il existe un certain rendement d'échelle. Comparativement à d'autres sous-groupes de l'industrie de la construction, cette industrie regroupe un nombre relativement petit de grandes entreprises, et l'augmentaachieved by increasing the scale of operations. Machinery and equipment purchases may not give a clear picture of substitution of capital investment for labour due to a high incidence of equipment rental and leasing. It should be noted that size groups are based on current dollars; this causes an artifical movement toward the larger size groups over time.

Figure IV compares profit levels among the provinces.

tion de la production s'accomplit dans une grande mesure par l'expansion des opérations. Les achats de machines et d'équipement ne donnent pas nécessairement une bonne idée du taux de remplacement de la main d'oeuvre par les immobilisations parce qu'une grande partie de l'équipement est loué. Il faut noter que les tranches de taille sont établies en se fondant sur des chiffres en dollars courants, ce qui produit avec le temps un mouvement artificiel vers les plus grands groupes.

La figure IV compare les niveaux des bénéfices entre les provinces.

Figure - IV
Levels of Profit and Loss Relative to Total Operating Revenue, Canada and Provinces, 1984
Niveaux des bénéfices et pertes relatifs au revenu total d'exploitation, Canada et provinces, 1984

(1) British Columbia includes Yukon and Northwest Territories

(1) La Colombie-Britannique comprend le Yukon et les Territoires du Nord-Ouest.

A sample of balance sheet information for establishments with related income statement data appears in Table 2. While Table 2 is primarily a crossclassification of statistical data by region or province and by size group, establishments having operations in more than one province (i.e., "multiple establishments") are consolidated and published separately on the last page of the table. This special treatment of "multiple establishments" was utilized because satisfactory techniques for allocating their consolidated balance sheet data by region and province were not available.

Table 3 presents a series of selected financial ratios based on income statement and balance sheet items

Le tableau 2 présente un échantillon de données relatives au bilan des établissements et de données connexes tirées d'états des revenus et dépenses. Bien que ce tableau renferme principalement des recoupements de données statistiques par région ou province et par tranche de taille, les données des établissements qui ont des activités dans plus d'une province (les "établissements multiples") sont regroupées et publiées séparément à la dernière page du tableau 2. Ces établissements étaient assujettis à ce traitement spécial faute de méthodes satisfaisantes pour répartir par province et par région les données globales de leurs bilans.

Le tableau 3 présente une série de proportions financières basées sur les postes des états des profits et dépenses et des

reported in Table 2. While only the more commonly used financial ratios are published in Table 3, basic data for deriving additional ratios are available from Tables 1 and 2.

**Definitions** 

Size groups used in the statistical tables are based on the current period's total gross operating revenue of individual provincial establishments.

New construction or capital expenditures (Text Tables I-IV) represents the total acquisition cost of new durable plant. Included are additions, replacements, alterations, conversions and renovations. All other construction is defined as repair. This consists of non-capitalized outlays made to maintain the operating efficiency of structures and is generally necessitated by damage or deterioration. Minor renovations and alterations are included in repair, but routine care of assets and maintenance are excluded.

Types of construction definitions include the following:

Highways, roads and streets: grading, scraping, oiling, filling, and construction of sidewalks and paths.

Bridges: trestles, culverts, overpasses, viaducts and approach work.

Sewers and watermains: sewage systems, tile drains, drainage ditches, storm sewers, water mains, hydrants and services, and other water and sewer facilities.

Parking lots: open surface area construction only, parking garages are included in non-residential building construction.

Non-residential buildings: light industrial, commercial and institutional.

Residential buildings: single, row, apartment and other residential buildings.

Other construction: airport runways, landing fields and tarmac, as well as any other type of construction, not included in the above structure groups.

#### Methodology

For census cycles beginning 1975, a blend of direct survey and random sampling methods is used to provide universe estimates.

Construction firms were separated by total operating revenue into two groups: those with more than \$750,000 annual revenue and those with annual revenue in the range of \$10,000 to \$750,000. The larger firms received the census long form, of which a copy

bilans que renferme le tableau 2. Même s'il ne présente que les proportions financières les plus fréquemment utilisées, les données de base qui se trouvent aux tableaux 1 et 2 permettent de calculer d'autres proportions.

#### Définitions

Les groupes de taille qui figurent dans les tableaux statistiques sont établis selon les recettes d'exploitation brutes totales des établissements provinciaux individuels pour la période courante.

Les nouvelles dépenses de construction ou en immobilisations (voir les tableaux I à IV du texte) représentent le coût d'acquisition total d'une nouvelle installation durable. Sont compris les adjonctions, les remplacements, les modifications, les transformations et les rénovations. Toute autre construction est définie comme étant une réparation. Il s'agit de dépenses non capitalisées faites pour assurer le fonctionnement efficace des ouvrages et généralement occasionnées par des dommages ou par la détérioration. Les rénovations et les modifications mineures sont comprises dans les réparations, mais non l'entretien régulier des biens.

Voici les types de travaux que l'on retrouve dans les genres de constructions:

Grandes routes, chemins et rues: terrassement, nivelement, épandage d'huile, remblayage, trottoirs et allées.

Ponts: chevalets, ponceaux, voies supérieures, viaducs et rampes d'accès.

Égouts et tuyaux d'aqueduc: systèmes d'égouts, drains, fossés de drainage, égouts pluviaux, tuyaux d'aqueduc, bouches d'incendie, conduites de branchement; autres genres de canalisations et de systèmes d'égouts.

Terrains de stationnement: construction de terrains de stationnement ouvert seulement; les édifices de stationnement figurent à la rubrique "bâtiments non-domiciliaires".

Bâtiments non-domiciliaires: bâtiments industriels légers, commerciaux et institutionnels.

Bâtiments domiciliaires: bâtiments simples, en rangée et appartements; autres bâtiments domiciliaires.

Autres travaux de construction: pistes d'envol, terrains d'atterrissage, aires d'embarquement, autres travaux de construction qui ne sont pas compris ci-dessus.

#### Méthodologie

À partir de 1975, on s'est servi pour les recensements à la fois de l'enquête directe et de l'échantillonnage aléatoire pour obtenir des estimations visant l'ensemble de l'univers.

Les entreprises de construction ont été partagées en deux groupes selon le montant annuel de leurs revenus d'exploitation: plus de \$750,000 et \$10,000 à \$750,000. Les grandes entreprises ont reçu le questionnaire de recensement détaillé, qui est reproduit à la fin de cette publication. Les petites

is provided at the end of this publication. The smaller firms were stratified by sub-industry group, size range and province, from which a sample was selected for the collection of financial and non-financial data. The sampling rates varied between 10% and 50% for firms with less than \$50,000 annual revenue. Financial data were collected for all firms with between \$375,000 and \$750,000 total operating revenue. The financial information was obtained from administrative records provided by Revenue Canada. Non-financial data (i.e. operating characteristics and labour data) were collected for a sub sample of this group, numbering approximately 10,000 contractors, by means of an abbreviated survey form. The sample results were inflated to the universe level using the weight associated with each record in the sample. The weight for a record was calculated as the inverse of its probability of inclusion in the sample (sampling rate). The large and small firms results were then merged and tabulated to produce the tables contained in this publication.

Users of the series are cautioned that universe measures for the years before 1981 are comparatively understated.

#### **Further Information**

The data presented in this publication represent only a selected portion of total 1984 statistical information available on the highway, road, street and bridge contracting industry. Additional breakdowns, statistics and definitions are available to users subject to the conditions of the Statistics Act. Please contact the Census of Construction Section, Industry Division of Statistics Canada.

entreprises ont, d'autre part, été stratifiées par sous-groupe, tranche de taille et province avant qu'on ne tire, de chaque strate, un échantillon pour la collecte de données financières et autres. Parmi les entreprises dont le revenu annuel était inférieur à \$50,000, la fraction de sondage allait de 10% à 50%. Des données financières ont été obtenues pour toutes les entreprises dont le revenu d'exploitation se situait entre \$375,000 et \$750,000. Elles ont été tirées des dossiers administratifs de Revenu Canada. Pour recueillir les données non financières (c.-à-d. les caractéristiques d'exploitation et les données sur la main-d'oeuvre) on a envoyé à un souséchantillon de ce groupe, comprenant environ 10,000 entrepreneurs, une formule d'enquête abrégée. Les chiffres obtenus de l'échantillon ont été gonflés au niveau de l'univers à l'aide du coefficient de pondération lié à chaque enregistrement de l'échantillon. D'après les calculs, ce coefficient de pondération était égal à l'inverse de la probabilité d'inclusion de l'entreprise dans l'échantillon (fraction de sondage). Les résultats des grandes et des petites entreprises ont ensuite été regroupés et mis en forme pour produire les tableaux de la présente publication.

Les utilisateurs de la série sont priés de noter que les mesures de l'univers qui se rapportent aux années précédant 1981 sont relativement sous-évaluées.

### Renseignements supplémentaires

Les données présentées dans cette publication ne constituent qu'une partie de l'information recueillie, pour 1984, sur les entrepreneurs de grandes routes, chemins, rues et ponts. On peut obtenir d'autres ventilations, données statistiques et définitions, sous réserve des stipulations de la Loi sur la statistique. Veuillez communiquer, à cette fin, avec la Section du recensement de la construction, Division de l'industrie de Statistique Canada.

See footnote(s) at end of tables. - Voir note(s) à la fin des tableaux.

#### **Footnotes**

- The cross-classification table by size group is based on total gross operating revenue. Information in certain columns does not always add to Canada, regional and provincial totals to meet secrecy requirements of the Statistics Act.
- (2) "Total value of construction output" is equivalent to "Construction revenue".
- (3) "Other" contracts include mining, logging roads, sub-division roads, etc., for private companies.
- (4) "Other construction" includes airport runways, pipelines, dams, hydro-electric projects, etc.
- (5) "Other revenue" includes sale of asphalt and ready mix concrete, gravel pit operations, etc.
- (6) All values in Tables 2 and 3 are at a sample or sub-census level, as defined by establishments reporting balance sheet information.
- (7) Establishments with operations in more than one province are consolidated and published separately on the last page of Table 2 (see table titled "multiple establishments"). This special treatment of "multiple establishments" in Table 2 was utilized because satisfactory techniques for allocating their consolidated balance sheet data by province and region were not available. Accordingly, the figures in the columns of Table 2, Canada, may not agree in certain cases with those published in the corresponding columns of Table 1, Canada.
- (8) "Working capital" is defined as the excess of current assets over current liabilities.
- (9) This size group was established to meet secrecy requirements of the Statistics Act.
- (10) British Columbia includes Yukon and Northwest Territories.
- (11) Information has been omitted to meet secrecy requirements of the Statistics Act.
- (12) Total capital employed is the sum of long-term liabilities and equity.

## Notes

- (1) Le tableau des données recoupées selon la tranche de taille est établi d'après le total du revenu brut d'exploitation. Les données de certaines colonnes n'égalent pas toujours le total pour le Canada, les régions et les provinces afin de satisfaire aux prescriptions de la Loi sur la statistique relatives au secret.
- "Valeur globale du produit de la construction" est équivalent à "revenus de construction".
- (3) "Autres" contrats comprennent les chemins d'accès pour les mines, les chantiers d'exploitation forestière, les rues dans les projets de maisons, etc., pour des sociétés privées.
- (4) "Autres travaux de construction" comprennnent les pistes de roulement d'aéroports, les pipes lines, les barrages, les projets hydro-électrique, etc.
- (5) "Autres revenus" comprennent la vente d'asphalte et de béton préparé, les exploitations gravières, etc.
- (6) Toutes les informations dans les tableaux 2 et 3 sont au niveau échantillon ou sous-recensement, définies par les établissements fournissant des informations sur leur bilan.
- (7) Les établissements qui ont exécuté des travaux dans plus d'une province sont regroupés et publiés séparément sur la dernière page du tableau 2 (voir la page intitulée "établissements multiples"). Ce groupement distinct accordé à ces établissements dans le tableau 2 a été utilisé vu l'absence de méthodes satisfaisantes pour faire une répartition par province et par région des données de bilan déclarées sur une base totale seulement. Il s'ensuit que les chiffres qui apparaissent dans les colonnes du tableau 2, Canada, ne comparent pas dans certains cas avec ceux publiés dans les colonnes correspondantes du tableau 1, Canada.
- (8) "Fonds de roulement" est défini par l'excès des actifs à court terme sur les passifs à court terme.
- (9) On a établi cette tranche de taille pour satisfaire aux prescriptions de la Loi sur la statistique relatives au secret.
- (10) La Colombie-Britannique comprend également le Yukon et les Territoires du Nord-Quest.
- (11) On a omis les données pertinentes pour satisfaire aux prescriptions de la Loi sur la statistique relatives au secret.
- (12) Capital total investi est la somme obtenue lorsqu'on additionne le passif à long terme avec le capital.

|--|---|
| GROSS OPERATING REVENUE  | \$ (omit cents)                             |
| 7. Gross revenue from construction operations  |   |
| <ol><li>Other gross operating revenue (e.g. sale of asphalt, ready-mix concrete, sand, gravel, rental of equipment (with<br/>snow removal, engineering fees, sand blasting, swimming pool service and parts, etc.) Please specify.</li></ol>   | out the operator),                          |
| (a)  |   |
| (b)  |   |
| (0)  |   |
| (c)  |   |
| 9. TOTAL GROSS OPERATING REVENUE   |   |
| EXPENSES  Note: Complete questions 10 and 11 below only if work-in-progress is shown as separate items in the Profit and Lo  | oss Statement                               |
| 10. Work-in-progress at beginning of reporting period  |   |
| 11. Work-in-progress at end of reporting period (brackets denote subtraction during totalling of this section)   |   |
|  |   |
| <ol> <li>Sub-contracts**</li> <li>Sub-contracts*</li> <li>If billings from sub-contractors are not separable from another reported item, please provide best dollar estimate)</li> </ol>   |   |
| 13. Materials. Exclude on site expenses and other direct costs which are not construction materials (e.g. purchase of eq oil, repairs to equipment, rentals, etc.). These costs should be reported in the appropriate items below. Estima if actual is not available.  | uipment parts, gas,<br>te cost of materials |
| 14. (a) Gross wages paid to all hourly-rated employees   | \$ and ¢                                    |
|  | - June 4                                    |
| (b) Estimated average hourly rate for all employees whose wages are shown in item 14(a) above  | uding bonuses and                           |
| 15. (a) Gross salaries paid (e.g. executives, management and administrative employees, supervised commissions)   | Number                                      |
| (b) Estimated average annual number of salaried employees whose salaries are shown in item 15(a)   |   |
| (b) Estimated average annual number of salaried employees whose salaried above   |   |
| 16. Employer contributions to employee welfare and benefit plans:  |   |
| 16. Employer contributions not included in questions 14(a) and 15(a) above, such as Workmen's Compensati Insurance; Canada or provincial pension plan; private pension plan; life, health and accident insurance p vacation and statutory holiday pay, etc; include allowances for travel, board and lodging). | ion; Unemployment                           |
| 17. Gas, oil and utilities (light, heat, etc.) expenses  |   |
| 18. Repair expenditures on all machinery and equipment   |   |
| 19. Repair expenditures on all buildings and structures  |   |
| 20. Total depreciation expense on buildings, machinery, equipment, etc.  |   |
| 21. All other expenses not specified above (e.g. interest charges, licences, insurance, hired trucking, equipme etc.)  | ent rental**, leasing,                      |
| 22. TOTAL EXPENSES (sum of items 10 minus 11 plus 12, 13, 14 (a), 15 (a), 16, 17, 18, 19, 20, 21)  |   |
| 23. NET OPERATING PROFIT BEFORE TAXES (IF LOSS PLEASE BRACKET).  (N.B. Please verify that item 22 plus (or minus) item 23 equals item 9 at top of page)  |   |
| 24. NON-OPERATING MISCELLANEOUS REVENUE (NET) – (IF LOSS PLEASE BRACKET):  |   |
| (a) Income from construction Joint Venture operations  |   |
| (b) Other (e.g. bad debts recovered, gain or loss on sale of fixed assets, investment income, etc.)  |   |
| 25. EARNINGS AND WITHDRAWALS OF WORKING OWNERS OR PARTNERS (UNINCORPORATED COMPA   |   |
| 26. Were any of the materials reported above in item 13 (e.g. liquid asphalt, granular materials, culverts, guard ready-mix concrete, piping etc.) provided to your sub-contractors for installation?  | rails, structural steel, Yes No             |
| 27. Were any construction materials installed by your own labour force (e.g. liquid asphalt, granular materials structural steel, ready-mix concrete, piping, etc.) provided by project owners (e.g. companies, governments, indi  | , culverts, guardrails, viduals)?           |

<sup>\*\*</sup>If your firm rented equipment with the operator, the cost of such expenses should be entered under item 12, "Sub-contracts". However, if the rented equipment was supplied without the operator, include under item 21, "All other expenses not specified above".

EN VERTU DE la Loi sur la statistique, Statuts du Canada de 1970 - 71 - 72, chapitre 15, et des lois et règlements de la province qui s'y appliquent. ACCORDS FÉDÉRAUX-PROVINCIAUX EN MATIÈRE D'ÉCHANGE DE RENSEIGNEMENTS. Afin d'éviter tout chevauchement des enquêtes et de fournir des statistiques uniformes, Statistique Canada mêne cette enquête aux termes d'un accord conjoint conclu en vertu de l'article 10 de la Loi sur la statistique. Statistique de 1970-71-72, chapitre 15, pour l'échange de renseignements avec l'Agence Centrale de la Statistique de la Colombie-Britannique, pour les répondants de cette province.

### Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

#### How to Obtain More Information

### Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous diverses formes. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

### Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section du recensement de la construction, Division de l'industrie.

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 1-613-951-9814) ou au centre de consultation de Statistique Canada à:

### HIGHLIGHTS

Selected highlights from the 1985 Census of Highway, Road, Street and Bridge Contractors indicate that:

- Total operating revenue for the industry in 1985 was \$4.3 billion. This represents an increase of 16% over 1984.
- Profits at 2.9% were up substantially from the 1984 level of .8%.
- Nationally, construction output, at 91% of total operating revenue, increased by 15%. Significant increases in construction output took place in British Columbia 51%, Newfoundland 34% and New Brunswick 30%. Increases in the remaining provinces ranged from 3% to 22%, except for Manitoba where construction revenue declined by 17%.
- Major proportions of total construction volume were: for highway, road and street contracts with provincial governments 39.7% and local governments 22.8%. The remainder was federal and other highway, street and road contracts 17.6%, and other construction 19.9%.
- Wage earners worked 62.3 million hours and were paid \$818.9 million in wages and benefits. Salaried employees worked 7,104 person years and were paid \$219.4 million in salaries and benefits.

### **FAITS SAILLANTS**

Voici certains faits saillants du recensement des entrepreneurs de grande route, chemin, rue et pont en 1985:

- En 1985, les recettes d'exploitation de cette branche d'activité ont totalisé \$4.3 milliards, soit une hausse de 16% par rapport au niveau observé en 1984.
- Atteignant un taux de 2.9%, les bénéfices se sont accrus de façon sensible comparativement au taux de 0.8% affiché en 1984.
- À l'échelle nationale, la production de la branche d'activité, qui représente 91% des recettes d'exploitation totales, a progressé de 15%. Les augmentations les plus importantes ont été enregistrées en Colombie-Britannique (51%), à Terre-Neuve (34%) et au Nouveau-Brunswick (30%). Dans les autres provinces, les hausses varient entre 3% et 22%, sauf au Manitoba où les recettes tirées de la construction ont fléchi de 17%.
- Voici une répartition des travaux de construction effectués: 39.7% pour les contrats de construction de grande route, de chemin et de rue conclus avec des administrations provinciales, 22.8% pour les contrats passés avec des administrations locales, 17.6% pour les contrats avec l'administration fédérale et autres clients, 19.9% pour autres travaux.
- Les ouvriers ont travaillé pendant 62.3 millions d'heures; les salaires et avantages qui leur ont été versés s'établissent à \$818.9 millions. Par ailleurs, le nombre d'annéespersonnes pour les employés a atteint 7,104, et la somme des traitements et avantages s'est élevée à \$219.4 millions.

## Introduction

The highway, road, street and bridge contracting industry, which is the subject of this publication, is one of the component industries covered by Statistics Canada's annual Census of the Construction Industries. Other publications resulting from this census are listed on page 43. For survey purposes, economic activity is subdivided into industries based on specialization of producer groups (a complete definition of principles and industries is available in Statistics Canada's Standard Industrial Classification, Catalogue 12-501). Accordingly, the Construction Industry segment dealt with in this document is defined as consisting of all establishments primarily engaged in the construction and repair of highways, roads, streets, bridges, parking lots and airport runways.

In addition to the primary specializations, this industry derives revenues from other types of contract construction, such as sewers, watermains and residential or non-residential building; as well as from other operations, such as sales of asphalt, aggregate or ready mix concrete, equipment rentals and snow clearing. Figure I illustrates the distribution of the contract portion of revenues.

The construction activity of the highway, road, street and bridge contracting industry is only a portion of the total value of construction performed in these categories. A substantial amount of highway and bridge work is done by the labour forces of the various municipal, provincial and federal government departments, particularly in the areas of repair, maintenance, materials supply, planning and design. The total volume of this portion, often referred to as own account construction, amounts to around 29% of the total put in place nationally. In addition, some 12% of highway and bridge work is performed as a secondary construction activity by contractors specializing in other types of construction (such as heavy engineering or non-residential building).

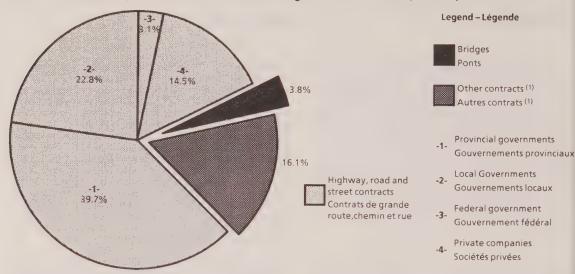

## Introduction

L'industrie de la construction de grandes routes, de chemins, de rues et de ponts, qui fait l'objet de cette publication, est une des industries visées par le recensement des industries de la construction que Statistique Canada effectue annuellement. On trouvera à la page 43 les titres d'autres publications qui découlent de ce recensement. Aux fins de l'enquête, l'activité économique est divisée en industries sur la base de la spécialisation des groupes producteurs (on trouvera une définition complète des principes et des industries dans la Classification type des industries de Statistique Canada, nº 12-501 au catalogue). En conséquence, la portion de l'industrie de la construction dont traite le présent document est définie comme formée de toutes les entreprises principalement engagées dans la construction et la réparation de grandes routes, de chemins, de rues, de ponts, terrains de stationnement et de pistes d'aéroport.

En plus de ses principaux domaines de spécialisation, cette industrie tire des revenus d'autres genres de construction à contrat, tels que les égouts, les conduites d'eau et la construction de bâtiments domiciliaires ou autres, ainsi que d'autres opérations, comme la vente d'asphalte, de granulat ou de béton préparé, la location de matériel et le déneigement. La figure I montre la distribution des revenus provenant de contrats.

L'activité de construction de l'industrie des entrepreneurs de grandes routes, chemins, rues et ponts ne représente qu'une partie de la valeur totale de la construction exécutée dans ces catégories. Le personnel des divers services municipaux, provinciaux et fédéraux réalise une part considérable des travaux qu'exigent les grandes routes et les ponts, principalement pour la réparation, l'entretien, la fourniture de matériel, la planification et la conception. Cette part, souvent appelée construction pour propre compte, compte au total pour environ 29% des travaux réalisés à l'échelle du pays. De plus, des entrepreneurs spécialisés dans d'autres types de construction (entrepreneurs en gros travaux de génie ou en construction non domiciliaire) réalisent, à titre d'activité de construction secondaire, environ 12% des travaux de construction de routes et de ponts.

Figure - I
Distribution of Contract Income by Type of Construction, Canada, 1985
Répartition des revenus provenant de contracts selon le genre de construction, Canada, 1985

(1) Includes sewers and watermains, parking lots and driveways, buildings, airport runways, etc.

(1) Comprend égouts et tuyaux d'aqueduc, parcs de stationnement et entrées de cour, bâtiments, pistes d'aéroport, etc.

Data on total highway, road, street and bridge construction are provided in the Statistics Canada publication *Construction in Canada* (Catalogue 64-201). The Text Tables I to IV, below, are reproduced from that publication. Figure II presents a breakdown of the total construction program for 1985, by major structure groups, based on the data in Text Table IV.

The 8.5% of total construction activity, shown in the figure below, for highway, road and bridge construction, represents an absolute value of \$5,780,914,000 out of a total of \$67,983,164,000 for the total 1985 Canadian construction program (lines 46 to 49 plus 80, divided by the total line in Text Table IV). The total highway, road and bridge construction value includes the industry output of \$3,499,166,882 (Table 1, items 3 to 7 plus 9) as well as other industries' output and own account, as related earlier.

The proportion, by province, that the industry commands of the total market is reflected in Figure III.

A detailed reconciliation between construction industry output and construction activity is available from the Census of Construction Section, Industry Division of Statistics Canada. On trouvera des données sur l'activité totale de construction de grandes routes, chemins, rues et ponts dans la publication de Statistique Canada Construction au Canada (nº 64-201 au catalogue). Les tableaux explicatifs I à IV qui suivent sont reproduits de cette publication. La figure II présente une ventilation du total de la construction en 1985, selon le genre de construction, en se fondant sur les données du tableau explicatif IV.

Le 8.5% des activités totales de construction, indiqué dans la figure ci-dessous pour la construction de grandes routes, chemins, rues et ponts, représente, en valeur absolue, \$5,780,914,000, sur un total de \$67,983,164,000 pour l'ensemble de la construction au Canada en 1985 (la somme des lignes 46 à 49 et 80, divisée par le total du tableau explicatif IV). La valeur globale des travaux de grandes routes, chemins et ponts comprend la production de l'industrie, qui s'élève à \$3,499,166,882 (tableau 1, postes 3 à 7, plus 9) ainsi que la production d'autres industries et la production à propre compte, tels qu'indiqués plus haut.

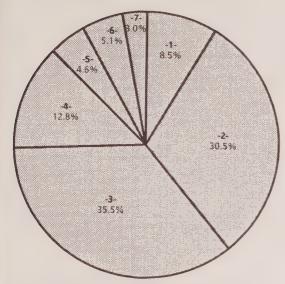

La figure III donne, par province, la proportion du marché total de la construction de grandes routes, chemins, rues et ponts réalisée par l'industrie elle-même.

On peut obtenir de la Section du recensement de la construction, Division de l'industrie de Statistique Canada une conciliation détaillée de la production de l'industrie de la construction et de l'activité de la construction.

### REVUE GÉNÉRALE

Census results for 1985 indicate that road builders performed \$3.957,707,926 worth of construction work (statistical Table 1). This figure includes \$668,010,840 of work subcontracted out to general or trade contractors. Additionally, a volume of \$390,372,438 of other revenues was generated, making the total operating revenue for the industry \$4,348,080,364 On the basis of work put in place by own labour force (i.e. total construction revenue minus sub-contracts), the 1,502 establishments classified to this industry in 1985 were responsible for \$3,289,697,086 of construction. The reported values for total construction revenue are known to contain some duplication of volume. The latter, in effect, could be reported on two occasions, first by the general contractor who sub-contracted out a certain portion of a project, and secondly by the general contractor to whom this same portion was awarded. If the contract was awarded to a firm acting primarily as a subcontractor, then no danger of volume duplication exists, as trade contractors are not included in this census group.

With highways being largely a provincial jurisdiction, 62.8% or \$3,129,251,000 of the total highway construction value for 1985 (\$4,981,790,000 Text Table IV) was acquired by this level of government. Of this volume, \$1,570,387,041 worth of roadwork was produced by the road building industry (statistical Table 1, item 3). Thus, although (as we have seen in Figure I) provincial government contracts are the largest single source of contract revenue for the industry, provincial government own account construction, preconstruction planning and design and prime subcontract activity still creates a major portion of nationally constructed highways.

Statistical Table 1 provides industry characteristics by province and by size groups. The size group data can be used for performance appraisal by individual firms in the industry and they form a basis for economic analysis in such areas as concentration and business size. The largest 211 operations produce 70.3% of total construction output, the largest 424 produce 86.7% and the largest 498 produce 89.8%. With a 100 firm concentration ratio running at around 55% the industry compares favourably in terms of competitiveness with other industries such as manufacturing. Considerations of profit to assets ratios at the total Canada level (as in statistical Table 3) would indicate a business size of between \$750,000 and \$999,999 dollars revenue size to have an optimum size in this industry.

An increase in productivity among the larger size groups, indicates some returns to scale. Compared to other construction industry sub-groups, this industry consists of a relatively small number of larger establishments, and expansion of output is to a great extent

Les résultats du recensement de 1985 indiquent que les constructeurs de routes ont réalisé pour \$3,957,707,926 de travaux de construction (tableau statistique 1). Ce chiffre comprend \$668,010,840 de travaux cédés en sous-traitance à des entrepreneurs généraux ou spécialisés. De plus, ces établissements avaient d'autres recettes qui se chiffraient à \$390,372,438 ce qui porte à \$4,348,080,364 les revenus de fonctionnement totaux de l'industrie. En ne prenant en compte que les travaux réalisés par leur propre personnel (c.-à-d. le total des revenus de construction moins la soustraitance), les 1,502 établissements classés dans cette industrie en 1985 ont réalisé pour \$3,289,697,086 de construction. Nous savons que le "total des revenus de construction" déclaré contient une certaine quantité de déclarations en double. Certains travaux pourraient en effet être déclarés deux fois, d'abord par l'entrepreneur général qui a cédé en sous-traitance une certaine partie du projet, puis par l'entrepreneur général qui a réalisé le travail en sous-traitance. Si le contrat a été adjugé à une entreprise agissant principalement comme sous-traitant, il n'existe aucun danger de double déclaration, étant donné que les entrepreneurs spécialisés ne sont pas compris dans cette catégorie d'enquêtés.

Comme les grandes routes sont principalement de juridiction provinciale, 62.8% ou \$3,129,251,000 de la valeur totale de la construction de grandes routes réalisée en 1985 (\$4,981,790,000 au tableau IV) est attribuable à ce palier de gouvernement. De ce montant, l'industrie de la construction de routes en a produit pour \$1,570,387,041 de travaux de routes (tableau statistique 1, poste 3). Ainsi, bien que (comme nous l'avons vu dans la figure I) les contrats des gouvernements provinciaux soient, pour l'industrie, la plus importante source de revenus tirés de contrats, les activités provinciales de construction pour propre compte, de planification et conception préalables, ainsi que de sous-traitance directe produisent toujours une majeur partie des grandes routes construites au Canada.

Le tableau statistique 1 présente les caractéristiques de l'industrie par province et par tranche de taille. Les données par tranche de taille, en plus de permettre à chaque entreprise de construction d'évaluer son propre rendement, forment la base d'une analyse économique de domaines comme la concentration et la taille des entreprises. Les 211 plus grandes opérations produisent 70.3% de la production totale en construction, les 424 plus grandes en produisent 86.7% et les 498 plus grandes en produisent 89.8%. Avec un taux de concentration pour les 100 principales entreprises d'environ 55%, l'industrie se compare favorablement, sur le plan de la compétitivité, avec d'autres industries comme la fabrication. Si on considère la proportion des bénéfices par rapport aux immobilisations pour l'ensemble du Canada (comme dans le tableau statistique 3), il semble que la taille optimale des entreprises dans cette branche d'activité est celle dont le revenu se situe entre \$750,000 et \$999,999.

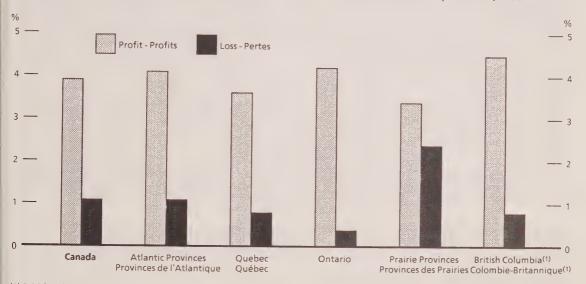

L'augmentation de la productivité chez les groupes de plus grande taille indique qu'il existe un certain rendement d'échelle. Comparativement à d'autres sous-groupes de l'industrie de la construction, cette industrie regroupe un nombre relativement petit de grandes entreprises, et l'augmentaachieved by increasing the scale of operations. Machinery and equipment purchases may not give a clear picture of substitution of capital investment for labour due to a high incidence of equipment rental and leasing. It should be noted that size groups are based on current dollars; this causes an artifical movement toward the larger size groups over time.

Figure IV compares profit levels among the provinces.

tion de la production s'accomplit dans une grande mesure par l'expansion des opérations. Les achats de machines et d'équipement ne donnent pas nécessairement une bonne idée du taux de remplacement de la main d'oeuvre par les immobilisations parce qu'une grande partie de l'équipement est loué. Il faut noter que les tranches de taille sont établies en se fondant sur des chiffres en dollars courants, ce qui produit avec le temps un mouvement artificiel vers les plus grands groupes.

La figure IV compare les niveaux des bénéfices entre les provinces.

(1) La Colombie-Britannique comprend le Yukon et les Territoires du Nord-Ouest.

A sample of balance sheet information for establishments with related income statement data appears in Table 2. While Table 2 is primarily a crossclassification of statistical data by region or province and by size group, establishments having operations in more than one province (i.e., "multiple establishments") are consolidated and published separately on the last page of the table. This special treatment of "multiple establishments" was utilized because satisfactory techniques for allocating their consolidated balance sheet data by region and province were not available.

Table 3 presents a series of selected financial ratios based on income statement and balance sheet items

Le tableau 2 présente un échantillon de données relatives au bilan des établissements et de données connexes tirées d'états des revenus et dépenses. Bien que ce tableau renferme principalement des recoupements de données statistiques par région ou province et par tranche de taille, les données des établissements qui ont des activités dans plus d'une province (les "établissements multiples") sont regroupées et publiées séparément à la dernière page du tableau 2. Ces établissements étaient assujettis à ce traitement spécial faute de méthodes satisfaisantes pour répartir par province et par région les données globales de leurs bilans.

Le tableau 3 présente une série de proportions financières basées sur les postes des états des profits et dépenses et des reported in Table 2. While only the more commonly used financial ratios are published in Table 3, basic data for deriving additional ratios are available from Tables 1 and 2.

### **Definitions**

Size groups used in the statistical tables are based on the current period's total gross operating revenue of individual provincial establishments.

New construction or capital expenditures (Text Tables I-IV) represents the total acquisition cost of new durable plant. Included are additions, replacements, alterations, conversions and renovations. All other construction is defined as repair. This consists of non-capitalized outlays made to maintain the operating efficiency of structures and is generally necessitated by damage or deterioration. Minor renovations and alterations are included in repair, but routine care of assets and maintenance are excluded.

Types of construction definitions include the following:

Highways, roads and streets: grading, scraping, oiling, filling, and construction of sidewalks and paths.

Bridges: trestles, culverts, overpasses, viaducts and approach work.

Sewers and watermains: sewage systems, tile drains, drainage ditches, storm sewers, water mains, hydrants and services, and other water and sewer facilities.

Parking lots: open surface area construction only, parking garages are included in non-residential building construction.

Non-residential buildings: light industrial, commercial and institutional.

Residential buildings: single, row, apartment and other residential buildings.

Other construction: airport runways, landing fields and tarmac, as well as any other type of construction, not included in the above structure groups.

### Methodology

Background. For the Census of Construction, a blend of direct survey and random sampling methods is used to provide universe estimates. Construction firms are separated into two groups: those with more than \$749,999 annual revenue and those with revenues in the range \$10,000-\$749,999. The larger firms are sent a census questionnaire. The smaller firms are stratified by sub-industry group, size range and province, from which samples are selected for the collec-

bilans que renferme le tableau 2. Même s'il ne présente que les proportions financières les plus fréquemment utilisées, les données de base qui se trouvent aux tableaux 1 et 2 permettent de calculer d'autres proportions.

### **Définitions**

Les groupes de taille qui figurent dans les tableaux statistiques sont établis selon les recettes d'exploitation brutes totales des établissements provinciaux individuels pour la période courante.

Les nouvelles dépenses de construction ou en immobilisations (voir les tableaux I à IV du texte) représentent le coût d'acquisition total d'une nouvelle installation durable. Sont compris les adjonctions, les remplacements, les modifications, les transformations et les rénovations. Toute autre construction est définie comme étant une réparation. Il s'agit de dépenses non capitalisées faites pour assurer le fonctionnement efficace des ouvrages et généralement occasionnées par des dommages ou par la détérioration. Les rénovations et les modifications mineures sont comprises dans les réparations, mais non l'entretien régulier des biens.

Voici les types de travaux que l'on retrouve dans les genres de constructions:

Grandes routes, chemins et rues: terrassement, nivelement, épandage d'huile, remblayage, trottoirs et allées.

Ponts: chevalets, ponceaux, voies supérieures, viaducs et rampes d'accès.

Égouts et tuyaux d'aqueduc: systèmes d'égouts, drains, fossés de drainage, égouts pluviaux, tuyaux d'aqueduc, bouches d'incendie, conduites de branchement; autres genres de canalisations et de systèmes d'égouts.

Terrains de stationnement: construction de terrains de stationnement ouvert seulement; les édifices de stationnement figurent à la rubrique "bâtiments non-domiciliaires".

Bâtiments non-domiciliaires: bâtiments industriels légers, commerciaux et institutionnels.

Bâtiments domiciliaires: bâtiments simples, en rangée et appartements; autres bâtiments domiciliaires.

Autres travaux de construction: pistes d'envol, terrains d'atterrissage, aires d'embarquement, autres travaux de construction qui ne sont pas compris ci-dessus.

### Méthodologie

Contexte. Dans le recensement de la construction, on utilise un mélange d'enquête directes et d'échantillonnages aléatoires pour obtenir des estimations de l'univers. Les entreprises du secteur de la construction sont classées dans deux groupes: celles dont les recettes annuelles dépassent \$749,999, et celles dont les recettes sont comprises entre \$10,000 et \$749,999. Les entreprises plus importantes reçoivent un questionnaire de recensement. Les entreprises plus petites sont classées par groupe de sous-activités, taille et province, et des échantillons

tion of financial and non-financial data. Financial data are transcribed from administrative records provided by Revenue Canada. The sampling rate varies between 10% and 50% for firms between \$10,-000 and \$374,999 annual revenue. Financial data are transcribed for all firms having total operating revenue in the range of \$375,000 to \$749,999. Nonfinancial data (e.g. type of construction specializations, labour characteristics etc.) are collected from a sub sample of this group, numbering approximately 14,000 contractors, by means of a condensed survey form. The sample results are inflated to universe levels using the weight associated with each record in the sample. The weight for a record is calculated as the inverse of its probability of selection in the sample (sampling ratio).

Coverage. The principal source of updates for the Census of Construction are administrative files of incorporated and unincorporated businesses. Since these sources can be up to a year out of date, the departmental Business Register is used to supplement these updates. This Register is principally sourced from Pay Deduction Accounts (another administrative source) provided monthly by Revenue Canada. It is also sourced from most Statistics Canada business surveys with which it is linked.

Sampling Error. Beginning with the 1986 data year, it will be possible to calculate estimates of standard error. For 1985 and prior years, however, the various samples used to create the estimates for the small firm segment were not completely random and sampling errors could not be generated; however, it is felt that for the period 1981-1985, the error was very small for most components due to the large sample sizes.

Response Rates. The overall response rates for the large firms approximates 95 per cent. For the remaining 5 per cent, administrative data from Revenue Canada, coupled with imputation for non available data items, are used. For the small firm sample portion, the response is close to 100 per cent.

Comparability Over Time. Data for the period 1981-1985 are reasonably comparable. In years prior to 1981, the data suffer from varying degrees of understatement due to less than complete samples. This is particularly true of industries dominated by large numbers of small businesses (e.g. trade and house building contractors). It should be noted, however, that while the magnitudes are less consistent, the use of the data in ratio form is quite valid due to the large sample sizes.

Benchmarking and revisions. Estimates prior to 1981 have not been revised. Statistics Canada will assess the feasibility of reprocessing the data for the period 1975-1980 through the current methodology.

Comparability With Other Data Sources. A reconciliation of industry volume with data produced by the

sont tirés pour la collecte des données financières et nonfinancières. Les données financières sont transcrites à partir des dossiers administratifs fournis par Revenu Canada. Le taux d'échantillonnage est compris entre 10% et 50% pour les entreprises dont les recettes annuelles sont comprises entre \$10,000 et \$374,999. Les données financières de toutes les compagnies ayant des recettes comprises entre \$375,000 et \$749,999 sont transcrites. Les données non-financières (spécialisations en construction, caractéristiques de la main d'oeuvre, etc.) sont recueillies auprès d'un sous-échantillon de ce groupe, se composant d'environ 14,000 entrepreneurs, grâce à un questionnaire d'enquête condensé. Les résultats de l'échantillon sont extrapolés au niveau de l'univers grâce au poids associé à chaque enregistrement de l'échantillon. Le poids d'un enregistrement est calculé comme étant l'inverse de sa probabilité de sélection dans l'échantillon (fraction de sondage).

Champ. La principale source des mises à jour du recensement de la construction sont les fichiers administratifs des entreprises constituées et individuelles. Comme ces sources peuvent avoir jusqu'à une année de retard, le registre des entreprises du Bureau les complète. Ce registre est alimenté principalement par les comptes de déduction à la source (une autre source administrative) communiqués chaque mois par Revenu Canada. Il est également alimenté par la plupart des enquêtes-entreprises de Statistique Canada auxquelles il est raccordé.

Erreur d'échantillonnage. À compter de l'année d'enquête 1986, il sera possible de calculer des estimations des erreurs types. Pour 1985 et les années antérieures, cependant, les divers échantillons utilisés pour établir les estimations du segment des petites entreprises n'étaient pas entièrement aléatoires, et les erreurs d'échantillonnage n'ont pu être calculées. On estime cependant que pour la période 1981-1985 l'erreur était très petite pour la plupart des composantes en raison de la grande taille des échantillons.

Taux de réponse. Les taux de réponse globaux pour les grandes entreprises sont d'environ  $95\,\%$ . Dans le cas des  $5\,\%$  restants, on utilise les données administratives communiquées par Revenu Canada et des imputations généralisées pour les données manquantes. Dans le cas des petites entreprises, le taux de réponse est proche de  $100\,\%$ .

Comparabilité dans le temps. Les données pour la période 1981-1985 se caractérisent par un degré de comparaison raisonnable. S'agissant des années antérieures à 1981, les données sont affectées d'une sous-estimation variable en raison d'échantillons moins que complets. Ceci est particulièrement le cas des branches dominées par un grand nombre de petites entreprises (métiers et entrepreneurs en construction résidentielle, par exemple). Il faut cependant remarquer que même si l'importance est moins systématique, l'utilisation des données sous forme de ratios est tout à fait valable en raison de la grande taille des échantillons.

Étalonnage et révisions. Les estimations d'avant 1981 n'ont pas été révisées. Statistique Canada étudie la possibilité de retraiter les données de la période 1975-1980 en utilisant la méthodologie actuelle.

Comparabilité avec les autres sources de données. Un rapprochement de l'activité de la branche et des données produites par Science, Technology and Capital Stock Division of Statistics Canada on total construction activity produced through its Capital Investment Surveys is done annually. As well, periodic reconciliations have been carried out on employment data collected on the Census with similar data generated by the Survey of Earnings, Employment and Payrolls and the Labour Force Survey. For further information please contact the Industry Division of Statistics Canada.

Editing of Questionnaires. Data received from respondents is both manually and machine edited. Rejects are scrutinized and, if warranted, respondents are contacted again. Previous years' reports, as well as administrative data, are also used as sources for missing or incomplete data.

### **Further Information**

The data presented in this publication represent only a selected portion of total 1985 statistical information available on the highway, road, street and bridge contracting industry. Additional breakdowns, statistics and definitions are available to users subject to the conditions of the Statistics Act. Please contact the Census of Construction Section, Industry Division of Statistics Canada.

la Division des Sciences, de la Technologie et du Stock de Capital de Statistique Canada sur l'ensemble de l'activité de la construction dans le cadre de ses enquêtes sur les immobilisations est fait chaque année. De plus, on a fait des rapprochements périodiques des données de l'emploi recueillies lors du recensement et des données semblables obtenues lors de l'enquête sur les gains, l'emploi et la rémunération et l'enquête sur la population active. Pour d'autres renseignements, s'adresser à la Division de l'Industrie de Statistique Canada.

Vérification des questionnaires. Les données communiquées par les répondants font l'objet d'une vérification manuelle et à la machine. Les rejets sont étudiés de près, et les répondants sont rappelés au besoin. Les rapports des années précédentes et les données administratives servent également de sources pour les données manquantes ou incomplètes.

### Renseignements supplémentaires

Les données présentées dans cette publication ne constituent qu'une partie de l'information recueillie, pour 1985, sur les entrepreneurs de grandes routes, chemins, rues et ponts. On peut obtenir d'autres ventilations, données statistiques et définitions, sous réserve des stipulations de la Loi sur la statistique. Veuillez communiquer, à cette fin, avec la Section du recensement de la construction, Division de l'industrie de Statistique Canada.

3 Source: Investissements privées et publics au Canada, perspective 1987, n° 61-205 au catalogue, Statistique Canada.

4 Due to changes in the Capital and Repair Expenditures Survey, changes have taken place in the structure classification. For details see footnote 12, Catalogue 64-201, 1985-1987.

<sup>(4)</sup> L'Enquête des dépenses en immobilisations et en réparations qui fait un relèvement par genre de construction a changé la classification de certaines structures. Pour plus de détails, voir la note 12, n° 64-201 au catalogue, 1985-1987.

See footnote(s) at end of tables. - Voir note(s) à la fin des tableaux.

#### Footnotes

- The cross-classification table by size group is based on total gross operating revenue. Information in certain columns does not always add to Canada, regional and provincial totals to meet secrecy requirements of the Statistics Act.
- (2) "Total value of construction output" is equivalent to "Construction revenue".
- (3) "Other" contracts include mining, logging roads, sub-division roads, etc., for private companies.
- (4) "Other construction" includes airport runways, pipelines, dams, hydro-electric projects, etc.
- (5) "Other revenue" includes sale of asphalt and ready mix concrete, gravel pit operations, etc.
- (6) All values in Tables 2 and 3 are at a sample or sub-census level, as defined by establishments reporting balance sheet information.
- (7) Establishments with operations in more than one province are consolidated and published separately on the last page of Table 2 (see table titled "multiple establishments"). This special treatment of "multiple establishments" in Table 2 was utilized because satisfactory techniques for allocating their consolidated balance sheet data by province and region were not available. Accordingly, the figures in the columns of Table 2, Canada, may not agree in certain cases with those published in the corresponding columns of Table 1, Canada.
- (8) "Working capital" is defined as the excess of current assets over current liabilities.
- (9) This size group was established to meet secrecy requirements of the Statistics Act.
- (10) British Columbia includes Yukon and Northwest Territories.
- (11) Information has been omitted to meet secrecy requirements of the Statistics Act.
- (12) Total capital employed is the sum of long-term liabilities and equity.

#### Notes

- (1) Le tableau des données recoupées selon la tranche de taille est établi d'après le total du revenu brut d'exploitation. Les données de certaines colonnes n'égalent pas toujours le total pour le Canada, les régions et les provinces afin de satisfaire aux prescriptions de la Loi sur la statistique relatives au secret.
- (2) "Valeur globale du produit de la construction" est équivalent à "revenus de construction".
- (3) "Autres" contrats comprennent les chemins d'accès pour les mines, les chantiers d'exploitation forestière, les rues dans les projets de maisons, etc., pour des sociétés privées.
- (4) "Autres travaux de construction" comprennnent les pistes de roulement d'aéroports, les pipes lines, les barrages, les projets hydro-électrique, etc.
- (5) "Autres revenus" comprennent la vente d'asphalte et de béton préparé, les exploitations gravières, etc.
- (6) Toutes les informations dans les tableaux 2 et 3 sont au niveau échantillon ou sous-recensement, définies par les établissements fournissant des informations sur leur bilan.
- (7) Les établissements qui ont exécuté des travaux dans plus d'une province sont regroupés et publiés séparément sur la dernière page du tableau 2 (voir la page intitulée "établissements multiples"). Ce groupement distinct accordé à ces établissements dans le tableau 2 a été utilisé vu l'absence de méthodes satisfaisantes pour faire une répartition par province et par région des données de bilan déclarées sur une base totale seulement. Il s'ensuit que les chiffres qui apparaissent dans les colonnes du tableau 2, Canada, ne comparent pas dans certains cas avec ceux publiés dans les colonnes correspondantes du tableau 1, Canada.
- (8) "Fonds de roulement" est défini par l'excès des actifs à court terme sur les passifs à court terme.
- (9) On a établi cette tranche de taille pour satisfaire aux prescriptions de la Loi sur la statistique relatives au secret.
- (10) La Colombie-Britannique comprend également le Yukon et les Territoires du Nord-Ouest.
- (11) On a omis les données pertinentes pour satisfaire aux prescriptions de la Loi sur la statistique relatives au secret.
- (12) Capital total investi est la somme obtenue lorsqu'on additionne le passif à long terme avec le capital.

#### Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

## **How to Obtain More Information**

Inquiries about this publication and related statistics or services should be directed to:

Construction Census Section, Industry Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 1-613-951-3499) or to the Statistics Canada reference centre in:

| St. John's     | (772-4073) | Winnipeg  | (983-4020) |
|----------------|------------|-----------|------------|
| Halifax        | (426-5331) | Regina    | (780-5405) |

## Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous diverses formes. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

#### Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section du recensement de la construction, Division de l'industrie,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 1-613-951-3499) ou au centre de consultation de Statistique Canada à:

| St. John's     | (772-4073) | Winnipeg  | (983-4020) |
|----------------|------------|-----------|------------|
| Halifax        | (426-5331) | Regina    | (780-5405) |
| Montréal       | (283-5725) | Edmonton  | (495-3027) |
| Ottawa         | (951-8116) | Calgary   | (292-6717) |
| Toronto        | (973-6586) | Vancouver | (666-3691) |
| Sturgeon Falls | (753-3200) |           |            |

Un service d'appel interurbain sans frais est offert, dans toutes les provinces et dans les territoires, aux utilisateurs qui habitent à l'extérieur des zones de communication locale des centres régionaux de consultation.

# Highlights

Selected highlights from the 1986 Census of Highway, Road, Street and Bridge Contractors indicate that:

- Total operating revenue for the industry in 1986 was \$4.4 billion. This represents an increase of 2% over 1985.
- Profits at 4.3% were up substantially from the 1985 level of 2.9%.
- Construction output, at 91% of total revenue, rose slightly by 2% overall. Major increases in Manitoba and Ontario, of 47% and 20%, were offset by less significant growth in other provinces and by declines in British Columbia, Nova Scotia and New Brunswick, of 20%, 17% and 16% respectively.
- Major proportions of total construction volume were for highway, road and street contracts with provincial governments 35.7% and local governments 21.5%. The remainder was federal and other highway, street and road contracts 21.9%, and other construction 20.9%.
- Wage earners worked 60.6 million hours and were paid \$811.1 million in wages and benefits. Salaried employees worked 7,534 person years and were paid \$236.2 million in salaries and benefits.

# Faits saillants

Voici certains faits saillants du recensement des entrepreneurs de grande route, chemin, rue et pont en 1986:

- En 1986, les recettes d'exploitation de cette branche d'activité ont totalisé \$4.4 milliards, soit une hausse de 2% par rapport au niveau observé en 1985.
- Atteignant un taux de 4.3%, les bénéfices se sont accrus de façon sensible comparativement au taux de 2.9% affiché en 1985.
- La production de la branche d'activité, qui représente 91% des recettes d'exploitation totales, a légèrement progressé de 2%. Les augmentations les plus importantes, au Manitoba et en Ontario avec 47% et 20% ont été compensées par une croissance moins importante dans d'autres provinces et par une baisse en Colombie-Britannique, en Nouvelle-Écosse et au Nouveau-Brunswick de 20%, 17% et 16% respectivement.
- Voici une répartition des travaux de construction effectués: 35.7% pour les contrats de construction de grande route, de chemin et de rue conclus avec des administrations provinciales, 21.5% pour les contrats passés avec des administrations locales, 21.9% pour les contrats avec l'administration fédérale et autres clients, 20.9% pour autres travaux
- Les ouvriers ont travaillé pendant 60.6 millions d'heures; les salaires et avantages qui leur ont été versés s'établissent à \$811.1 millions. Par ailleurs, le nombre d'années-personnes pour les employés a atteint 7,534, et la somme des traitements et avantages s'est élevée à \$236.2 millions.

# Introduction

The highway, road, street and bridge contracting industry, which is the subject of this publication, is one of the component industries covered by Statistics Canada's annual Census of the Construction Industries. Other publications resulting from this census are listed on page 43. For survey purposes, economic activity is subdivided into industries based on specialization of producer groups (a complete definition of principles and industries is available in Statistics Canada's Standard Industrial Classification, Catalogue 12-501). Accordingly, the Construction Industry segment dealt with in this document is defined as consisting of all establishments primarily engaged in the construction and repair of highways, roads, streets, bridges, parking lots and airport runways.

In addition to the primary specializations, this industry derives revenues from other types of contract construction, such as sewers, watermains and residential or non-residential building; as well as from other operations, such as sales of asphalt, aggregate or ready mix concrete, equipment rentals and snow clearing. Figure I illustrates the distribution of the contract portion of revenues.

The construction activity of the highway, road, street and bridge contracting industry is only a portion of the total value of construction performed in these categories. A substantial amount of highway and bridge work is done by the labour forces of the various municipal, provincial and federal government departments, particularly in the areas of repair, maintenance, materials supply, planning and design. The total volume of this portion, often referred to as own account construction, amounts to around 32% of the total put in place nationally. In addition, some 11% of highway and bridge work is performed as a secondary construction activity by contractors specializing in other types of construction (such as heavy engineering or non-residential building).

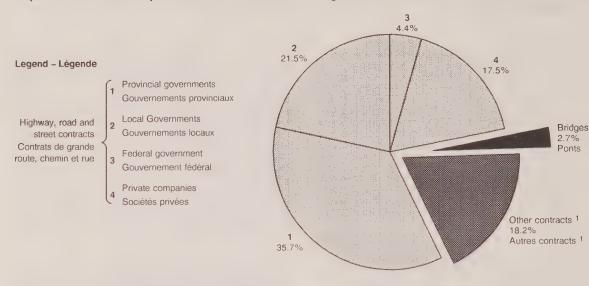

# Introduction

L'industrie de la construction de grandes routes, de chemins, de rues et de ponts, qui fait l'objet de cette publication, est une des industries visées par le recensement des industries de la construction que Statistique Canada effectue annuellement. On trouvera à la page 43 les titres d'autres publications qui découlent de ce recensement. Aux fins de l'enquête, l'activité économique est divisée en industries sur la base de la spécialisation des groupes producteurs (on trouvera une définition complète des principes et des industries dans la Classification type des industries de Statistique Canada, nº 12-501 au catalogue). conséquence, la portion de l'industrie de la construction dont traite le présent document est définie comme formée de toutes les entreprises principalement engagées dans la construction et la réparation de grandes routes, de chemins. de rues, de ponts, terrains de stationnement et de pistes d'aéroport.

En plus de ses principaux domaines de spécialisation, cette industrie tire des revenus d'autres genres de construction à contrat, tels que les égouts, les conduites d'eau et la construction de bâtiments domiciliaires ou autres, ainsi que d'autres opérations, comme la vente d'asphalte, de granulat ou de béton préparé, la location de matériel et le déneigement. La figure 1 montre la distribution des revenus provenant de contrats.

L'activité de construction de l'industrie des entrepreneurs de grandes routes, chemins, rues et ponts ne représente qu'une partie de la valeur totale de la construction exécutée dans ces catégories. Le personnel des divers services municipaux, provinciaux et fédéraux réalise une part considérable des travaux qu'exigent les grandes routes et les ponts, principalement pour la réparation, l'entretien, la fourniture de matériel, la planification et la conception. Cette part, souvent appelée construction pour propre compte, compte au total pour environ 32% des travaux réalisés à l'échelle du pays. De plus, des entrepreneurs spécialisés dans d'autres types de construction (entrepreneurs en gros travaux de génie ou en construction non domiciliaire) réalisent, à titre d'activité de construction secondaire, environ 11% des travaux de construction de routes et de ponts.

Figure I
Distribution of Contract Income by Type of Construction, Canada, 1986
Répartition des revenus provenant de contracts selon le genre de construction, Canada, 1986

1 Includes sewers and watermains, parking lots and driveways, buildings, airport runways, etc.

1 Comprend égouts et tuyaux d'aqueduc, parcs de stationnement et entrées de cour, bâtiments, pistes d'aéroport, etc.

Data on total highway, road, street and bridge construction are provided in the Statistics Canada publication *Construction in Canada* (Catalogue 64-201). The Text Tables I to IV, below, are reproduced from that publication. Figure II presents a breakdown of the total construction program for 1986, by major structure groups, based on the data in Text Table IV.

The 8.0% of total construction activity, shown in the figure below, for highway, road and bridge construction, represents an absolute value of \$5,722,725,000 out of a total of \$71,700,629,000 for the total 1986 Canadian construction program (lines 46 to 49 plus 80, divided by the total line in Text Table IV). The total highway, road and bridge construction value includes the industry output of \$3,537,146,948 (Table 1, items 3 to 7 plus 9) as well as other industries' output and own account, as related earlier.

The proportion, by province, that the industry commands of the total market is reflected in Figure III.

A detailed reconciliation between construction industry output and construction activity is available from the Construction Census Section, Industry Division of Statistics Canada.

On trouvera des données sur l'activité totale de construction de grandes routes, chemins, rues et ponts dans la publication de Statistique Canada Construction au Canada (nº 64-201 au catalogue). Les tableaux explicatifs l à IV qui suivent sont reproduits de cette publication. La figure II présente une ventilation du total de la construction en 1986, selon le genre de construction, en se fondant sur les données du tableau explicatif IV.

Le 8.0% des activités totales de construction, indiqué dans la figure ci-dessous pour la construction de grandes routes, chemins, rues et ponts, représente, en valeur absolue, \$5,722,725,000, sur un total de \$71,700,629,000 pour l'ensemble de la construction au Canada en 1986 (la somme des lignes 46 à 49 et 80, divisée par le total du tableau explicatif IV). La valeur globale des travaux de grandes routes, chemins et ponts comprend la production de l'industrie, qui s'élève à \$3,537,146,948 (tableau 1, postes 3 à 7, plus 9) ainsi que la production d'autres industries et la production à propre compte, tels qu'indiqués plus haut.

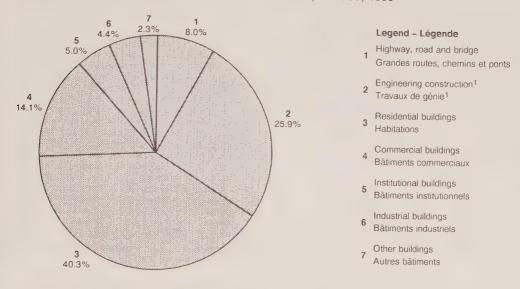

La figure III donne, par province, la proportion du marché total de la construction de grandes routes, chemins, rues et ponts réalisée par l'industrie elle-même.

On peut obtenir de la Section du recensement de la construction, Division de l'industrie de Statistique Canada une conciliation détaillée de la production de l'industrie de la construction et de l'activité de la construction.

### GENERAL REVIEW

Census results for 1986 indicate that road builders performed \$4,023,410,386 worth of construction work (statistical Table 1). This figure includes \$727,681,651 of work subcontracted out to general or trade contractors. Additionally, a volume of \$403,836,131 of other revenues was generated, making the total operating revenue for the industry \$4,427,246,517. On the basis of work put in place by own labour force (i.e. total construction revenue minus sub-contracts), the 1,630 establishments classified to this industry in 1986 were responsible for \$3,295,728,735 of construction. The reported values for total construction revenue are known to contain some duplication of volume. The latter, in effect, could be reported on two occasions, first by the general contractor who sub-contracted out a certain portion of a project, and secondly by the general contractor to whom this same portion was awarded. If the contract was awarded to a firm acting primarily as a subcontractor, then no danger of volume duplication exists, as trade contractors are not included in this census group.

With highways being largely a provincial jurisdiction, 61.4% or \$3,085,634,000 of the total highway construction value for 1986 (\$5,029,513,000, Text Table IV) was acquired by this level of government. Of this volume, \$1,436,731,621 worth of roadwork was produced by the road building industry (statistical Table 1, item 3). Thus, although (as we have seen in Figure I) provincial government contracts are the largest single source of contract revenue for the industry, provincial government own account construction, preconstruction planning and design and prime subcontract activity still creates a major portion of nationally constructed highways.

Statistical Table 1 provides industry characteristics by province and by size groups. The size group data can be used for performance appraisal by individual firms in the industry and they form a basis for economic analysis in such areas as concentration and business size. The largest 209 operations produce 70.8% of total construction output, the largest 395 produce 85.0% and the largest 477 produce 88.5%. With a 100 firm concentration ratio running at around 54% the industry compares favourably in terms of competitiveness with other industries such as manufacturing. Considerations of profit to assets ratios at the total Canada level (as in statistical Table 3) would indicate a business size of between \$750,000 and \$999,999 dollars revenue size to have an optimum size in this industry.

# REVUE GÉNÉRALE

Les résultats du recensement de 1986 indiquent que les constructeurs de routes ont réalisé pour \$4,023,410,386 de travaux de construction (tableau statistique 1). Ce chiffre comprend \$727,681,651 de travaux cédés en sous-traitance à des entrepreneurs généraux ou spécialisés. De plus, ces établissements avaient d'autres recettes qui se chiffraient à \$403,836,131 ce qui porte à \$4,427,246,517 les revenus de fonctionnement totaux de l'industrie. En ne prenant en compte que les travaux réalisés par leur propre personnel (c.-à-d. le total des revenus de construction moins la sous-traitance), les 1,630 établissements classés dans cette industrie en 1986 ont réalisé pour \$3,295,728,735 de construction. Nous savons que le "total des revenus de construction" déclaré contient une certaine quantité de déclarations en double. Certains travaux pourraient en effet être déclarés deux fois, d'abord par l'entrepreneur général qui a cédé en sous-traitance une certaine partie du projet, puis par l'entrepreneur général qui a réalisé le travail en sous-traitance. Si le contrat a été adjugé à une entreprise agissant principalement comme sous-traitant, il n'existe aucun danger de double déclaration, étant donné que les entrepreneurs spécialisés ne sont pas compris dans cette catégorie d'enquêtés.

Comme les grandes routes sont principalement de juridiction provinciale, 61.4% ou \$3,085,634,000 de la valeur totale de la construction de grandes routes réalisée en 1986 (\$5,029,513,000 au tableau IV) est attribuable à ce palier de gouvernement. De ce montant, l'industrie de la construction de routes en a produit pour \$1,436,731,621 de travaux de routes (tableau statistique 1, poste 3). Ainsi, bien que (comme nous l'avons vu dans la figure I) les contrats des gouvernements provinciaux soient, pour l'industrie, la plus importante source de revenus tirés de contrats, les activités provinciales de construction pour propre compte, de planification et conception préalables, ainsi que de sous-traitance directe produisent toujours une majeure partie des grandes routes construites au Canada.

Le tableau statistique 1 présente les caractéristiques de l'industrie par province et par tranche de taille. Les données par tranche de taille, en plus de permettre à chaque entreprise de construction d'évaluer son propre rendement, forment la base d'une analyse économique de domaines comme la concentration et la taille des entreprises. Les 209 plus grandes opérations produisent 70.8% de la production totale en construction, les 395 plus grandes en produisent 85.0% et les 477 plus grandes en produisent 88.5%. Avec un taux de concentration pour les 100 principales entreprises d'environ 54%, l'industrie se compare favorablement, sur le plan de la compétitivité, avec d'autres industries comme la fabrication. Si on considère la proportion des bénéfices par rapport aux immobilisations pour l'ensemble du Canada (comme dans le tableau statistique 3), il semble que la taille optimale des entreprises dans cette branche d'activité est celle dont le revenu se situe entre \$750,000 et \$999,999.

An increase in productivity among the larger size groups, indicates some returns to scale. Compared to other construction industry sub-groups, this industry consists of a relatively small number of larger establishments, and expansion of output is to a great extent achieved by increasing the scale of operations. Machinery and equipment purchases may not give a clear picture of substitution of capital investment for labour due to a high incidence of equipment rental and leasing. It should be noted that size groups are based on current dollars; this causes an artifical movement toward the larger size groups over time.

Figure IV compares profit levels among the provinces.

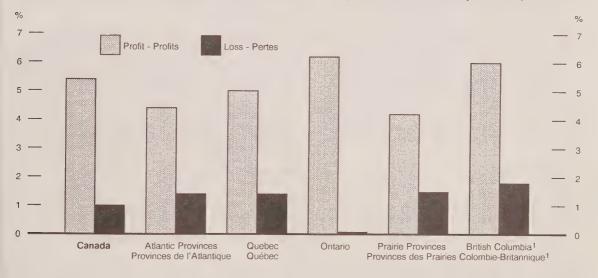

L'augmentation de la productivité chez les groupes de plus grande taille indique qu'il existe un certain rendement d'échelle. Comparativement à d'autres sous-groupes de l'industrie de la construction, cette industrie regroupe un nombre relativement petit de grandes entreprises, et l'augmentation de la production s'accomplit dans une grande mesure par l'expansion des opérations. Les achats de machines et d'équipement ne donnent pas nécessairement une bonne idée du taux de remplacement de la main d'oeuvre par les immobilisations parce qu'une grande partie de l'équipement est loué. Il faut noter que les tranches de taille sont établies en se fondant sur des chiffres en dollars courants, ce qui produit avec le temps un mouvement artificiel vers les plus grands groupes.

La figure IV compare les niveaux des bénéfices entre les provinces.

Figure IV

Levels of Profit and Loss Relative to Total Operating Revenue, Canada and Provinces, 1986

Niveaux des bénéfices et pertes relatifs au revenu total d'exploitation, Canada et provinces, 1986

<sup>&</sup>lt;sup>1</sup> British Columbia includes Yukon and Northwest Territories.

<sup>&</sup>lt;sup>1</sup> La Colombie-Britannique comprend le Yukon et les Territoires du Nord-Ouest.

A sample of balance sheet information for establishments with related income statement data appears in Table 2. While Table 2 is primarily a cross-classification of statistical data by region or province and by size group, establishments having operations in more than one province are consolidated and published separately on the last page of the table. This special treatment was utilized because satisfactory techniques for allocating consolidated balance sheet data by region and province are not available.

Table 3 presents a series of selected financial ratios based on income statement and balance sheet items reported in Table 2. While only the more commonly used financial ratios are published in Table 3, basic data for deriving additional ratios are available from Tables 1 and 2.

#### **Definitions**

Size groups used in the statistical tables are based on the current period's total gross operating revenue of individual provincial establishments.

New construction or capital expenditures (Text Tables I-IV) represents the total acquisition cost of new durable plant. Included are additions, replacements, alterations, conversions and renovations. All other construction is defined as repair. This consists of non-capitalized outlays made to maintain the operating efficiency of structures and is generally necessitated by damage or deterioration. Minor renovations and alterations are included in repair, but routine care of assets and maintenance are excluded.

Types of construction definitions include the following:

Highways, roads and streets: grading, scraping, oiling, filling, and construction of sidewalks and paths.

**Bridges:** trestles, culverts, overpasses, viaducts and approach work.

**Sewers and watermains:** sewage systems, tile drains, drainage ditches, storm sewers, water mains, hydrants and services, and other water and sewer facilities.

Parking lots: open surface area construction only, parking garages are included in non-residential building construction.

Non-residential buildings: light industrial, commercial and institutional.

Residential buildings: single, row, apartment and other residential buildings.

Le tableau 2 présente un échantillon de données relatives au bilan des établissements et de données connexes tirées d'états des revenus et dépenses. Bien que ce tableau renferme principalement des recoupements de données statistiques par région ou province et par tranche de taille, les données des établissements qui ont des activités dans plus d'une province sont regroupées et publiées séparément à la dernière page du tableau 2. Ces établissements étaient assujettis à ce traitement spécial faute de méthodes satisfaisantes pour répartir par province et par région les données globales de leurs bilans.

Le tableau 3 présente une série de proportions financières basées sur les postes des états des profits et dépenses et des bilans que renferme le tableau 2. Même s'il ne présente que les proportions financières les plus fréquemment utilisées, les données de base qui se trouvent aux tableaux 1 et 2 permettent de calculer d'autres proportions.

#### **Définitions**

Les groupes de taille qui figurent dans les tableaux statistiques sont établis selon les recettes d'exploitation brutes totales des établissements provinciaux individuels pour la période courante.

Les nouvelles dépenses de construction ou en immobilisations (voir les tableaux l à IV du texte) représentent le coût d'acquisition total d'une nouvelle installation durable. Sont compris les adjonctions, les remplacements, les modifications, les transformations et les rénovations. Toute autre construction est définie comme étant une réparation. Il s'agit de dépenses non capitalisées faites pour assurer le fonctionnement efficace des ouvrages et généralement occasionnées par des dommages ou par la détérioration. Les rénovations et les modifications mineures sont comprises dans les réparations, mais non l'entretien régulier des biens.

Voici les types de travaux que l'on retrouve dans les genres de constructions:

Grandes routes, chemins et rues: terrassement, nivelement, épandage d'huile, remblayage, trottoirs et allées.

Ponts: chevalets, ponceaux, voies supérieures, viaducs et rampes d'accès.

Égouts et tuyaux d'aqueduc: systèmes d'égouts, drains, fossés de drainage, égouts pluviaux, tuyaux d'aqueduc, bouches d'incendie, conduites de branchement; autres genres de canalisations et de systèmes d'égouts.

**Terrains de stationnement:** construction de terrains de stationnement ouvert seulement; les édifices de stationnement figurent à la rubrique "bâtiments non-domiciliaires".

Bâtiments non-domiciliaires: bâtiments industriels légers, commerciaux et institutionnels.

Bâtiments domiciliaires: bâtiments simples, en rangée et appartements; autres bâtiments domiciliaires.

Other construction: airport runways, landing fields and tarmac, as well as any other type of construction, not included in the above structure groups.

# Methodology

Background. For the Census of Construction, a blend of direct survey and random sampling methods is used to provide universe estimates. Construction firms are separated into two groups: those with more than \$749,999 annual revenue and those with revenues in the range \$10,000-\$749,999. The larger firms are sent a census questionnaire. The smaller firms are stratified by sub-industry group, size range and province, from which samples are selected for the collection of financial and non-financial data. Financial data are transcribed from administrative records provided by Revenue Canada. The sampling rate varies between 10% and 50% for firms between \$10,000 and \$374,999 annual revenue. Financial data are transcribed for all firms having total operating revenue in the range of \$375,000 to \$749,999. Non-financial data (e.g. type of construction specializations, labour characteristics etc.) are collected from a sub sample of this group, numbering approximately 14,000 contractors, by means of a condensed survey form. The sample results are inflated to universe levels using the weight associated with each record in the sample. The weight for a record is calculated as the inverse of its probability of selection in the sample (sampling ratio).

Coverage. The principal source of mailing frame updates for the Census of Construction are administrative files of incorporated and unincorporated businesses. Since these sources can be up to a year out of date, the departmental Business Register is used to supplement these updates. This Register is principally sourced from Pay Deduction Accounts (another administrative source) provided monthly by Revenue Canada. It is also sourced from most Statistics Canada business surveys with which it is linked.

Sampling Error. Beginning with the 1986 data year, it will be possible to calculate estimates of standard error. For 1985 and prior years the various samples used to create the estimates for the small firm segment were not completely random and sampling errors could not be generated; however, it is felt that for the period 1981-1985, the error was very small for most components due to the large sample sizes.

Response Rates. The overall response rates for the large firms approximates 95 per cent. For the remaining 5 per cent, administrative data from Revenue Canada, coupled with imputation for non available data items, are used. For the small firm sample portion, the response is close to 100 per cent.

Autres travaux de construction: pistes d'envol, terrains d'atterrissage, aires d'embarquement, autres travaux de construction qui ne sont pas compris ci-dessus.

# Méthodologie

Contexte. Dans le recensement de la construction, on utilise un mélange d'enquêtes directes et d'échantillonnages aléatoires pour obtenir des estimations de l'univers. Les entreprises du secteur de la construction sont classées dans deux groupes: celles dont les recettes annuelles dépassent \$749,999, et celles dont les recettes sont comprises entre \$10,000 et \$749,999. Les entreprises plus importantes reçoivent un questionnaire de recensement. Les entreprises plus petites sont classées par groupe de sous-activité, taille et province, et des échantillons sont tirés pour la collecte des données financières et non-financières. Les données financières sont transcrites à partir des dossiers administratifs fournis par Revenu Canada. Le taux d'échantillonnage est compris entre 10% et 50% pour les entreprises dont les recettes annuelles sont comprises entre \$10,000 et \$374,999. Les données financières de toutes les compagnies ayant des recettes comprises entre \$375,000 et \$749,999 sont transcrites. Les données non-financières (spécialisations en construction, caractéristiques de la main d'oeuvre, etc.) sont recueillies auprès d'un sous-échantillon de ce groupe, se composant d'environ 14,000 entrepreneurs, grâce à un questionnaire d'enquête condensé. Les résultats de l'échantillon sont extrapolés au niveau de l'univers grâce au poids associé à chaque enregistrement de l'échantillon. Le poids d'un enregistrement est calculé comme étant l'inverse de sa probabilité de sélection dans l'échantillon (fraction de sondage).

Champ. La principale source des mises à jour de l'univers du recensement de la construction sont les fichiers administratifs des entreprises constituées et individuelles. Comme ces sources peuvent avoir jusqu'à une année de retard, le registre des entreprises du Bureau les complète. Ce registre est alimenté principalement par les comptes de déduction à la source (une autre source administrative) communiqués chaque mois par Revenu Canada. Il est également alimenté par la plupart des enquêtes-entreprises de Statistique Canada auxquelles il est raccordé.

Erreur d'échantillonnage. À compter de l'année d'enquête 1986, il sera possible de calculer des estimations des erreurs types. Pour 1985 et les années antérieures les divers échantillons utilisés pour établir les estimations du segment des petites entreprises n'étaient pas entièrement aléatoires, et les erreurs d'échantillonnage n'ont pu être calculées. On estime cependant que pour la période 1981-1985 l'erreur était très petite pour la plupart des composantes en raison de la grande taille des échantillons.

Taux de réponse. Les taux de réponse globaux pour les grandes entreprises sont d'environ 95%. Dans le cas des 5% restants, on utilise les données administratives communiquées par Revenu Canada et des imputations généralisées pour les données manquantes. Dans le cas des petites entreprises, le taux de réponse est proche de 100%.

Comparability Over Time. Data for the period 1981-1986 are reasonably comparable. In years prior to 1981, the data suffer from varying degrees of understatement due to less than complete frames. This is particularily true of industries dominated by large numbers of small businesses (e.g. trade and house building contractors). It should be noted, however, that while the magnitudes are less consistent, the use of the data in ratio form is quite valid due to the large sample sizes.

**Benchmarking and revisions.** Estimates prior to 1981 have not been revised. Statistics Canada will assess the feasibility of reprocessing the data for the period 1975-1980 through the current methodology.

Comparability With Other Data Sources. A reconciliation of industry volume with data produced by the Science, Technology and Capital Stock Division of Statistics Canada on total construction activity based on its Capital Investment Surveys is done annually. As well, periodic reconciliations have been carried out on employment data collected by the Census with similar data generated by the Survey of Earnings, Employment and Payrolls and the Labour Force Survey. For further information please contact the Industry Division of Statistics Canada.

Editing of Questionnaires. Data received from respondents are both manually and machine edited. Rejects are scrutinized and, if warranted, respondents are contacted again. Previous years' reports, as well as administrative data, are also used to estimate for missing or incomplete data.

## **Further Information**

The data presented in this publication represent only a selected portion of total 1986 statistical information available on the highway, road, street and bridge contracting industry. Additional breakdowns, statistics and definitions are available to users subject to the conditions of the Statistics Act. Please contact the Construction Census Section, Industry Division of Statistics Canada.

Comparabilité dans le temps. Les données pour la période 1981-1986 se caractérisent par un degré de comparaison raisonnable. S'agissant des années antérieures à 1981, les données sont affectées d'une sous-estimation variable en raison d'un univers moins que complets. Ceci est particulièrement le cas des branches dominées par un grand nombre de petites entreprises (métiers et entrepreneurs en construction résidentielle, par exemple). Il faut cependant remarquer que même si l'importance est moins systématique, l'utilisation des données sous forme de ratios est tout à fait valable en raison de la grande taille des échantillons.

Étalonnage et révisions. Les estimations d'avant 1981 n'ont pas été révisées. Statistique Canada étudie la possibilité de retraiter les données de la période 1975-1980 en utilisant la méthodologie actuelle.

Comparabilité avec les autres sources de données. Un rapprochement de l'activité de la branche et des données produites par la Division des Sciences, de la Technologie et du Stock de Capital de Statistique Canada sur l'ensemble de l'activité de la construction dans le cadre de ses enquêtes sur les immobilisations est fait chaque année. De plus, on a fait des rapprochements périodiques des données de l'emploi recueillies lors du recensement et des données semblables obtenues lors de l'enquête sur les gains, l'emploi et la rémunération et l'enquête sur la population active. Pour d'autres renseignements, s'adresser à la Division de l'Industrie de Statistique Canada.

Vérification des questionnaires. Les données communiquées par les répondants font l'objet d'une vérification manuelle et à la machine. Les rejets sont étudiés de près, et les répondants sont rappelés au besoin. Les rapports des années précédentes et les données administratives servent également pour estimer les données manquantes ou incomplètes.

#### Renseignements supplémentaires

Les données présentées dans cette publication ne constituent qu'une partie de l'information recueillie, pour 1986, sur les entrepreneurs de grandes routes, chemins, rues et ponts. On peut obtenir d'autres ventilations, données statistiques et définitions, sous réserve des stipulations de la Loi sur la statistique. Veuillez communiquer, à cette fin, avec la Section du recensement de la construction, Division de l'industrie de Statistique Canada.

| 87. Other engineering construction ~ Autres travaux de génie   | 516,265   | 582,298        | 612,112              | 608,657    | 688,272   |

(2)

- Tableau tiré de la Construction au Canada, 1986-1988
  Actual expenditures 1984-1986, preliminary actual 1987, intentions 1988
  Dépenses réelles en 1984-1986, dépenses réelles provisoires en 1987 et dépenses projetées en 1988.
  Due to changes in the Capital and Repair Expenditures Survey, changes have taken place in the structure classification. For details see footnote 12, Catalogue 64-201, 1986-1988
- (3) L'Enquête des dépenses en immobilisations et en réparations qui fait un relèvement par genre de construction a changé la classification de certaines structures. Pour plus de détails, voir la note 12, n<sup>o</sup> 64-201 au catalogue, 1986-1988

  The value of residential repair and renovation work done on own account for the period 1980-1984 has been revised substantially upward.

  La valeur des travaux de réparation et de rénovation domiciliaire fait pour propre compte durant la période 1980 - 1984 a été revisé substantiellement à la hausse.

(4)

(4)

Other construction consists of own account work. (5)

- Les autres travaux consistent à du travail fait pour son propre compte.

  Les autres travaux consistent à du travail fait pour son propre compte.

  Data for government departments include data for the other mental content and exclude data for proprietary Crown corporations, which are all classified to other industries. Agency Crown Corporations, on the other hand, are provisionally classified in part to other industries and the remainder to government
- Les données provenant des ministères gouvernementaux comprennent aussi celles des corporations de la couronne de département tandis que les données des corporations de la Couronne de propriétaire sont comprises avec les autres entreprises. Par contre, une partie des corporations de la Couronne de mandataire sont temporairement classées comme entreprises et le reste sont rangées sous "administrations lédérales".

See footnote(s) at end of tables. - Voir note(s) à la fin des tableaux.

#### **FOOTNOTES**

- (1) The cross-classification table by size group is based on total gross operating revenue. Information in certain columns does not always add to Canada, regional and provincial totals to meet secrecy requirements of the Statistics Act.
- (2) "Total value of construction output" is equivalent to "Construction revenue".
- (3) "Other" contracts include mining, logging and sub-division roads, etc., for private companies.
- (4) "Other construction" includes airport runways, pipe-lines, dams, hydro-electric projects, etc.
- (5) "Other revenue" includes sale of asphalt and ready mix concrete, gravel pit operations, etc.
- (6) All values in Tables 2 and 3 are at a sample or sub-census level, as defined by establishments reporting balance sheet information.
- (7) Establishments with operations in more than one province are consolidated and published separately on the last page of Table 2 (see table titled "multi-provincial establishments"). Therefore, provincial data in the columns of Table 2 may not agree with those published in the corresponding columns of Table 1, Canada.
- (8) "Working capital" is defined as the excess of current assets over current liabilities.
- (9) This size group was established to meet secrecy requirements of the Statistics Act.
- (10) British Columbia includes Yukon and Northwest Territories.
- (11) Information has been omitted to meet secrecy requirements of the Statistics Act.
- (12) Total capital employed is the sum of long-term liabilities and equity.

#### NOTES

- (1) Le tableau des données recoupées selon la tranche de taille est établi d'après le total du revenu brut d'exploitation. Les données de certaines colonnes n'égalent pas toujours le total pour le Canada, les régions et les provinces afin de satisfaire aux prescriptions de la Loi sur la statistique relatives au secret.
- (2) "Valeur globale du produit de la construction" est équivalent à "revenus de construction".
- (3) "Autres" contrats comprennent les chemins d'accès pour les mines, les chantiers d'exploitation forestière, les rues dans les projets de maisons, etc., pour des sociétés privées.
- (4) "Autres travaux de construction" comprennnent les pistes de roulement d'aéroports, les pipes lines, les barrages, les projets hydro-électrique, etc.
- (5) "Autres revenus" comprennent la vente d'asphalte et de béton préparé, les exploitations gravières, etc.
- (6) Toutes les informations dans les tableaux 2 et 3 sont au niveau échantillon ou sous-recensement, définies par les établissements fournissant des informations sur leur bilan.
- (7) Les établissements qui ont exécuté des travaux dans plus d'une province sont regroupés et publiés séparément sur la dernière page du tableau 2 (voir la page intitulée "établissements multi-provinciaux"). Donc, les données provinciales qui apparaissent dans les colonnes du tableau 2 ne comparent pas avec ceux publiés dans les colonnes correspondantes du tableau 1, Canada.
- (8) "Fonds de roulement" est défini par l'excès des actifs à court terme sur les passifs à court terme.
- (9) On a établi cette tranche de taille pour satisfaire aux prescriptions de la Loi sur la statistique relatives au secret.
- (10) La Colombie-Britannique comprend également le Yukon et les Territoires du Nord-Ouest.
- (11) On a omis les données pertinentes pour satisfaire aux prescriptions de la Loi sur la statistique relatives au secret.
- (12) Capital total investi est la somme obtenue lorsqu'on additionne le passif à long terme avec le capital.

# INTERESTED INACQUIRING A CANADIAN ORIGINAL?

Then Canadian Social Trends is the acquisition for you. A first on the Canadian scene, this journal is claiming international attention from the people who need to know more about the social issues and trends of this country.

Drawing on a wealth of statistics culled from hundreds of documents, *Canadian Social Trends* looks at Canadian population dynamics, crime, education, social security, health, housing, and more.

For social policy analysts, for trendwatchers on the government or business scene, for educators and students, Canadian Social Trends provides the information for an improved discussion and analysis of Canadian social issues.

Published four times a year, Canadian Social Trends also features the latest social indicators, as well as information about new products and services available from Statistics Canada.

Alors *Tendances sociales canadiennes* est la publication qu'il vous faut. Première en son genre sur la scène canadienne, cette revue retient l'attention des gens d'ici et d'ailleurs qui désirent en savoir plus sur les questions sociales de l'heure au pays.

À l'aide d'abondantes statistiques extraites de nombreux documents, *Tendances sociales canadiennes* brosse le tableau de la dynamique de la population canadienne, de la criminalité, de l'éducation, de la sécurité sociale, de la santé, de l'habitation et de plusieurs autres sujets.

Que ce soit pour les analystes de la politique sociale, les analystes des tendances oeuvrant au sein des administrations publiques et du monde des affaires, les enseignants ou encore les étudiants, *Tendances sociales canadiennes* dégage l'information nécessaire à des discussions et des analyses approfondies relativement aux questions sociales.

Tendances sociales canadiennes présente également les plus récents indicateurs sociaux de même que des renseigneme relatifs aux produits et services qu'offre Statistique Canacie
